Southern/Northern: Electrophoresis, Blotting, and Crosslinking in 2.5 Hours Instead of 30.

Stratagene has streamlined agarose gel electrophoresis and blotting. The system decreases the time required, from sample loading to prehybridization tenfold.

**VAGE™ System**

The VAGE™ vertical agarose/acylamide gel electrophoresis system allows the casting of agarose or acrylamide gels in the unit. Nucleic acids can be electrophoresed through a 3 mm, 0.8% vertical agarose gel in less than two hours with excellent resolution (Figure 1).

Because the gels are thin, staining, depurination, and denaturation can be accomplished in 15 minutes.

12 HOURS 4 HOURS 12 HOURS 2 HOURS

CONVENTIONAL METHOD—TOTAL TIME 30 HOURS

**FIGURE 1:**

Figure Legend: Fractionation of end labeled DNA markers on 3mm thick 0.8% agarose by the VAGE apparatus and transfer to Duralon—UV™ membranes using the PosiBlot pressure bloter.

A. Ethidium stained gel showing high resolution.
B. Same gel after pressure blotting.
C. Autoradiogram of membrane after pressure transfer.
The PosiBlot™ positive pressure blotter permits the transfer of nucleic acids in 1/3 the time of vacuum blotters and 1/50 the time of capillary blotting (Figure 2). Pressure blotting does not dehydrate gels as do other methods. This allows the use of substantially higher pressure differentials, compared with vacuum blotting, without gel collapse. The PosiBlot apparatus reduces blotting time to 15 minutes.

Stratagene offers a full selection of nitrocellulose, reinforced nitrocellulose and nylon membranes. Each membrane is stringently lot tested to ensure consistency when performing Northern and Southern blotting. Please call Technical Services for detailed information on Stratagene's time saving blotting systems and membranes.
Guaranteed performance in continuously adjustable and fixed-volume models.

Eppendorf Ultra Micro Digital Pipette is the only continuously adjustable air displacement pipette with guaranteed performance from 0.5 to 10 μL. Just twist the control button at the top of the pipette to select the desired volume, and a "click-set" ratchet mechanism will lock the volume in place—making accidental changes practically impossible. Four Eppendorf Ultra Micro Fixed-Volume Models, with built-in tip ejector, handle volumes of 1, 2, 5, and 10 μL.

Top performance starts at the bottom.

For more information, call 800-645-3050; in New York, 516-334-7500. Or write Brinkmann Instruments, Inc., Cantiague Road, Westbury, NY 11590. (In Canada: 416-675-7911; 50 Galaxy Blvd., Rexdale, Ont. M9W 4Y5)
Introducing SigmaPlot™ 4.0.
The powerful new version of the world's finest PC software for the production of publication-quality scientific charts and graphs...on your own IBM® or compatible personal computer.

Used by over 15,000 scientists.
SigmaPlot, Version 3.1, is the software of choice worldwide for creating graphics for scientific papers and poster sessions. It was selected "Editor's Choice" by PC Magazine for its outstanding output. Now, Jandel's new SigmaPlot Version 4.0 gives you all of the advantages of 3.1...and much, much more.

Designed with the scientist in mind.
SigmaPlot 4.0 is elegant and easy to use...with its pull-down menu interface, mouse and keyboard support, novice prompting, and full context-sensitive interactive help. Input data directly from the keyboard, or from Lotus 123®, or ASCII files, into SigmaPlot's huge worksheet - 16,000 columns by 65,000 rows. Version 4.0's full mathematical transform language lets you plot mathematical functions or transform data. SigmaPlot 4.0 also gives you highly sophisticated non-linear curve fitting...and error bars that are complemented by confidence intervals and quality control lines.

Outstanding plot output.
Extremely high-quality output is given, a result of extraordinary control over the appearance of your graphs. With SigmaPlot 4.0 you have outstanding page layout control, as well as control over individual width, color and position of independent graphic elements. You also have more fonts, more scales, and more graph types to work with. Not to mention multiple axes, Greek, mathematical and European characters, descriptive statistics, and much more. You can easily export graphs into WordPerfect™ 5.0, PageMaker®, Ventura Publisher® and many other programs. And SigmaPlot outputs to plotters, slide makers, dot matrix printers, Postscript® and HP Laserjet™ printers.

Affordable and fully supported.
Priced under $500, SigmaPlot 4.0 is well within reach of any research facility. And, like all Jandel products, SigmaPlot 4.0 comes with a money-back guarantee and the full technical support of Jandel's experts. It's what you'd expect from the leader in software for scientists. Find out how much you can do with SigmaPlot 4.0. Call today for a FREE brochure: 1-800-874-1888 (inside CA 415-924-8640).
Enhance your vision.

The precision optics of the Olympus BH-2 Series for diversified microscopy. From distortion-free image quality to reduced eye fatigue, they give you performance that is anything but routine.

Then consider the ergonomic design, the exceptional versatility and operational simplicity, the unquestioned dependability. And it's easy to see why the Olympus BHTU model, for example, has become the preferred laboratory microscope of its type in the market.

The Olympus BH-2 Series microscopes—they'll change the way you look at things.

TRANSACTIONS AND PROCEEDINGS OF THE ROYAL SOCIETY

From July 1990 Proceedings and Transactions will change significantly to reflect the changing needs of the scientific community. The changes will benefit authors as well as readers. Each journal now has its own experienced Editor and a distinguished international Editorial Board that will allow the faster evaluation of papers.

Regular monthly publication programmes and a streamlined processing of manuscripts will lead to shorter publication times – 3 months for Proceedings and 6 months for Transactions. Papers can now be submitted through the editorial office at the Royal Society, directly to the Editors, as well as through Fellows and Foreign Members.

The page size for Proceedings A and Transactions A will be 24.7cm x 17.4cm, single column. For Proceedings B and Transactions B it will be 29.7cm x 21.0cm, double column. Proceedings will have more, shorter papers on a wider variety of topics. Transactions can receive papers that are too long for Proceedings. Transactions A and B will still publish the widely-acclaimed discussion meetings held at the Royal Society.

International contributions are particularly welcome. For instructions to authors and further information please contact the Editorial Office at The Royal Society, 6 Carlton House Terrace, London SW1Y 5AG, United Kingdom. Tel: 071–839 5561. Fax: 071–930 2170.

PROCEEDINGS A – MATHEMATICAL AND PHYSICAL SCIENCES
Proceedings A will remain committed to the broad area of Mathematical and Physical Sciences. Although papers of the same length as at present will be published, greater emphasis will be given to the fast publication of shorter papers. More papers will be attracted from overseas; subject coverage will be widened; and publication times will be greatly reduced. Under the editorship of Professor John Enderby of the University of Bristol, Proceedings A will reaffirm its position as the journal of choice for the international dissemination of lively and topical research in the physical sciences.

TRANSACTIONS A – PHYSICAL SCIENCES AND ENGINEERING
The new-style Transactions A will still publish the papers presented by international speakers at Royal Society Discussion Meetings, together with some long original papers on Mathematical and Computer Science, Physics, Chemistry, Earth Sciences and Engineering. A new feature will be 'Theme' issues containing groups of stimulating papers and reviews on topics of broad or interdisciplinary scientific interest. Publication will be on a regular monthly basis and the journal will be edited by Professor Frank Smith of University College London.

PROCEEDINGS B – BIOLOGICAL SCIENCES
Edited by Professor Bryan Clarke of the University of Nottingham, the biological Proceedings will change significantly. Physically it will have a larger format (A4, double column), and will concentrate on publishing shorter papers than at present. Streamlined refereeing and production methods will allow very rapid publication (3 months). Topicality and diversity will be emphasized in the changes, with each issue containing a larger range of papers of interest to a wider readership, covering the best of current research.

TRANSACTIONS B – BIOLOGICAL SCIENCES
The new-style Transactions B will contain shorter papers than at present with a planned publication time of 5-7 months from receipt, giving a broader subject coverage in most issues. It will also continue to publish the reports of the Royal Society's international Discussion Meetings and occasional special, long, monographic papers and review articles. The issues will be published at monthly intervals. Dr Quentin Bone of the Marine Biological Association, Plymouth, will be the editor of the journal.

The Royal Society, 6 Carlton House Terrace, London SW1Y 5AG, United Kingdom

"...physics and chemistry are coming together to provide new insights and new possibilities in materials research."

Don’t miss out.

There’s one way to make sure that you don’t miss a single insight, a single possibility. Subscribe to Current Contents on Diskette® /Physical, Chemical & Earth Sciences, and each week you’ll receive the contents pages from hundreds of journals in these fields on diskette.

Because without this electronic information tool, something important is bound to escape your attention. Landmark research in solid-state chemistry. High-temperature superconductivity. Electrides. Non-linear optical materials. Diamond synthesis.

Scientific research on a higher plane

With Current Contents on Diskette, you’ll be alerted to the articles that discuss new developments in your field...whatever the field. You’ll create custom search profiles to zero in on the bibliographic data you need. And you’ll generate orders for article reprints at the touch of a key. It’s all certain to add depth and dimension to your research.

Four weeks, free

Use Current Contents on Diskette for four weeks. We’re sure it will inform you, improve your research efforts, and save time along the way. If you don’t agree, just write cancel on your invoice, send it back to ISI, and accept our thanks for trying Current Contents on Diskette.

Start your trial subscription now by calling toll-free, 800-336-4474, operator 379, or write us at one of the addresses below.

Don’t let any new research pass you by.
Winning of the Most Outstanding Book in the Chemistry, Physics, Mathematics, and Astronomy category for 1989 by the Professional and Scholarly Division of the American Association of Publishers

Schrödinger: Life and Thought
Walter J. Moore
"...Walter Moore has written an admirable book about this intriguing man...it is an attempt to analyze a soul, and in that respect, it surpasses even 'The Double Helix' by James Watson in its examination of the most visceral drives of a great scientist." —The New York Times Book Review
1989 / 513 pp. / 35434-X / Hardcover $39.50

Boojums All the Way Through
Communicating Science in a Prosaic Age
N. David Mermin
This collection of writings presents the dilemma of communicating modern physics to both physicists and nonphysicists. They all share a preoccupation with both the substance and the style of written scientific communication, and offer a unique view of everyday science or scientific practice with the intention of increased clarity for the reader.
1990 / 308 pp. / 0227219 / Hardcover $49.50
38880-5 / Paper $16.95

Human Evolution
An Illustrated Guide
P.J. Andrews and C.B. Stringer
Maurice Wilson, Illustrator
This book traces the development of our ancestors through time from the earliest beginnings to the emergence of modern humans. Thirty million years ago the primate Aegyptotithecus lived in the luxuriant rain forest that then covered North Africa. Copublished with The British Museum
1989 / 46 pp. / 38824-4 / Paper $11.95

The Physiology of Excitable Cells
Third Edition
David J. Aidley
The third edition of this highly successful book has been extensively revised and restructured to incorporate the many recent advances in the subject, including new information on the properties of single ionic channels and the molecular biology of membrane proteins.
1990 / 550 pp. / 030301-X / Hardcover $90.00
38845-5 / Paper $34.50

Chaotic Evolution and Strange Attractors
D. Ruelle
This book is an accessible and leisurely account of systems that display a chaotic time evolution. The evolution, though deterministic, displays features more characteristic of a stochastic behavior and the analysis presented here is based on a statistical technique known as time series analysis.
Lezioni Lincee Lectures
1989 / 96 pp. / 36830-8 / Paper $12.95

Animal Physiology
Adaptation and Environment
Fourth Edition
Review from Third Edition...
"...a really excellent book...there will be very few experienced physiologists who will not gain a greater understanding of their subject from this account."
—Nature
This is the fully revised and updated Fourth Edition of the acclaimed Animal Physiology, a survey emphasizing fundamental principles rather than details. The text is written for those who want to know how things work, what animals do, and how they do it.
1990 / 620 pp. / 38196-7 / Hardcover $39.50

Numerical Recipes
The Art of Scientific Computing
(FORTRAN Version)
William H. Press, Brian P. Flannery,
Saul A. Teukolsky, and William T. Vetterling
The original Numerical Recipes was published in the FORTRAN computer language with all the programs translated into Pascal as an extensive appendix. With the new Numerical Recipes in Pascal, the Pascal index has been removed from the original Numerical Recipes. Therefore, this book has a new subtitle, FORTRAN Version, and has been assigned a new ISBN to reflect the absence of the Pascal programs.
FORTRAN: 1990 / 720 pp. / 38330-7 / Hardcover $47.50
Pascal: 1989 / 762 pp. / 37516-9 / Hardcover $47.50
C: 1988 / 768 pp. / 052146489X / Hardcover $47.50

The Evolution of Technology
George Basalla
"George Basalla has done scholars a valuable service...[his] own insights at an intermediate level of analysis may well provide the building blocks for a more rigorous and sophisticated theory of technological change." —Science
The Cambridge History of Science Series
1989 / 256 pp. / 22855-7 / Hardcover $32.50
29681-1 / Paper $10.95

Neutrino Astrophysics
John N. Bahcall
"The book provides a thorough and expert summary of a field of intense current interest." —Nature
"This book should serve as the standard reference for this rapidly developing area of research for some time to come." —Physics Today
1989 / 450 pp. / 35113-8 / Hardcover $75.00
37975-X / Paper $24.95

Now in paperback...
Rainbows, Halos, and Glories
R. Greenler
"...[a] handsome and absorbing book..."
—Scientific American
"...Rainbows, Halos, and Glories is well written, informative, interesting, and just plain fun to read." —The Sciences
1985 pp. / 38865-1 / Paper $22.95

Once you have your protein or nucleic acid sequence, you can analyze it in hundreds of different ways with PC/GENE®.

PC/GENE®'s programs include primary and secondary structure analysis, statistical analysis, site detection for specific regions within a sequence, cleavage and restriction analysis, database searching and gel assembly. With PC/GENE, you can search for unique regions to make oligonucleotide primers for PCR® and confirms the absence of secondary binding. Running on IBM PC's and compatibles, PC/GENE is menu and mouse driven, so it is easy to use even if you have little computer experience.

PC/GENE's unique functionality incorporates the latest research methods to provide you with better scientific tools.

- Designs primers for site-directed mutagenesis and determines the effects of the mutation on the resulting protein.
- Predicts the chemical and physical properties of proteins using any of 57 published tables, or your own.
- Finds any of 180 different protein patterns in just a few minutes, each accompanied by a complete list of literature references.

We believe that the best way to try PC/GENE is in your own lab, so IntelliGenetics offers a no-obligation 30-day trial of the full package. Call our toll-free number 1-800-876-9994 for details.

Now You Can Get the Full Text of Science Online Through BRS Colleague

Every day there are new information sources that can complicate your search for up-to-the-minute data. That’s why BRS Colleague is so vital to today’s biomedical professional. Colleague is a complete, online information service that compiles the world’s key biomedical data and presents it in a format that’s both simple and efficient to search.

Your Link to the Full-Text of Science

The Comprehensive Core Medical Library (CCML) database is the cornerstone of Colleague. The CCML contains the full text of more than 20 textbooks and over 70 major journals including Science. Now, with Colleague’s new LINK command, a publication cited in MEDLINE can instantly be retrieved from the CCML. No other search service offers this feature.

Colleague’s collection of biomedical databases — more than 40 in all — includes biomedical industry favorites like BIOSIS and MEDLINE. Some, like AIDS Knowledgebase from San Francisco General Hospital, furnish data that is often not available in other sources. As a menu-driven service, Colleague is designed to be easily used by anyone who needs current information. All that is required is a personal computer and a modem. Best of all, Colleague is available 22 hours per day, with significant discounts after 6:00 p.m.

Time is a Dwindling Resource

In today’s changing world of science, every minute is precious. You can’t afford to be without the fastest, most up-to-date resources for information. With BRS Colleague, you never will.

Call us today.

"Gromek has discovered the first retreating infinite series."

"He looks just like you. But he looks just like me, too."
Get the transfection results you want. Again and again.

Presenting IBI's geneZAPPER™ 450/2500 Electroporation System.

Everything about the geneZAPPER is designed to give you optimum results. No other electroporation system gives you the flexibility and control of geneZAPPER. It gives you the widest range of capacitance and voltage settings available. And our exclusive Protocol Reference Database gives you optimal parameters for both procaryotic and eucaryotic cells. Plus, you get thoughtfully engineered features like special safety functions and electrode and cuvette options.

Find out how to optimize your transfection results with IBI's geneZAPPER. Give us a call at 1-800-243-2555, or (203) 786-5600 for further information.

Find out why our statistical software wins all the awards.

At Abacus Concepts, we've created two entirely different statistical software packages with one quite astonishing feature: they're both easy to use.

Yet they perform so well they've won all the major awards as the most outstanding statistical software for the Macintosh.

StatView® is the most versatile, easy-to-use, broad-based statistical analysis and graphing package available for the Macintosh.

It is also the winner of the Macworld World Class Award for best statistics/math software in 1987, 1988, and 1989.

SuperANOVA, our new statistical package for general linear modeling, won the 1989 Editors' Choice Award from MacUser.

With SuperANOVA, you can easily solve any general linear model:

ANOVA, ANCOVA, MANOVA, MANCOVA, regression, repeated measures, and more. Just as important, SuperANOVA lets you build and solve complex models without learning a command language.

Both programs offer the most powerful and easy-to-use presentation graphics features of any statistical package available. That's because we know that your job is not complete until you present your results.

To test all this award-winning power on your numbers, just call ours. We'll send a free demonstration kit for both StatView and SuperANOVA.

Free Demo Kit:
1-800-666-STAT, Ext. 3535

StatView and SuperANOVA run on the Macintosh II family, SE/30, SE, Plus and Portable. © 1990 Abacus Concepts, Inc. All brand and product names are trademarks or registered trademarks of their respective holders.

1,000 watts of reliable pulsed RF power for your advanced NMR system.

As your horizons in NMR spectroscopy expand, so do your needs for clean rf power and the noise-suppression capability of a gating/blanking circuit.

Our new Model 1000LP embodies the qualities you should expect of your rf power amplifier: Conservatively-rated pulse output of 1,000 watts with Class A linearity over a 100 dB dynamic range. An ample 8-msec pulse width at 10% duty cycle. Newly expanded bandwidth of 2-200 MHz, instantly available without need for tuning or bandswitching. Total immunity to load mismatch at any frequency or power level, even from shorted or open output terminals. A continuously variable gain control to permit adjustment of output level as desired.

And an unexpected bonus: A continuous-wave mode, delivering over 200 watts for your long-pulse applications.

If you're upgrading your system or just moving into kilowatt-level spectroscopy, a few minutes with this remarkable instrument will show you the ease of shutting it down to reduce noise 30 dB in less than 4 µsec. The friendly grouping of lighted pushbuttons for power, standby, operate, and pulse. Finally, the peace of mind from knowing that the Model 1000LP will not let you down when you're most dependent on it.

Call us to discuss your present setup and your plans for improvement. Or write for our NMR Application Note and the informative booklet "Your guide to broadband power amplifiers."

STUDIES OF HIGH TEMPERATURE SUPERCONDUCTORS
Edited by Anat Narlikar

an International Series from
Nova Science Publishers

With Bednorz and Müller's pioneering discovery of high temperature superconductors in 1986, superconductivity has ceased to remain an area of mere academic curiosity and a preserve of a small community of low temperature physicists and cryogenists. Renouncing their cold confines freed from the grip of liquid helium, superconductors have stepped into the realm of high temperatures. The area has been transformed into a rich field of intensive and highly competitive research, encompassing diverse disciplines such as: structural chemistry; ceramic engineering; metallurgy; solid state electronics; experimental and theoretical condensed matter physics.

During the last few years the growth of the new field has occurred on an international scale and perhaps has been more rapid than in most other fields. There has been an extraordinary rush of data and results which are continually being published as short texts dispersed in many excellent journals, some of which were started to ensure rapid publication exclusively in this field. As a result, the literature on HTSCs has indeed become so massive and unfortunately so diffuse that it is becoming increasingly difficult to keep abreast with the important and reliable facets of this fast-growing field. The present series "Studies of High Temperature Superconductors" has been launched to, at least in part, fulfill this need.

Each chapter in these volumes comprises a detailed review or an extended paper focussing on one or more of the frontal aspects of research and applications, including the state-of-art technology pertaining to HTSCs. The contributors are internationally recognized authorities in the field.
