Hudson, N. Y.

The Geological Society of America:

The New York meeting was the largest in the history of the society, the number of fellows and fellows-elect in attendance being 133. The sessions began Thursday afternoon at Columbia University with the business meeting and the reading of memorials and were continued through Friday and Saturday at the American Museum of Natural History. Six titles were added to the printed list, making eighty-six papers in all on the program as offered. On account of the long list of communications, the sessions were held in two sections on Friday and Saturday, but even with this arrangement twenty-nine papers were read by title only, and most of the remainder were read in abbreviated form.

The council accepted the invitation of the University of New Mexico to hold the annual meeting of 1907 at Albuquerque, New Mexico, beginning December 30, 1907. It was felt that a meeting in the west would be of interest and advantage to the society at large, since it would give an opportunity for a general convention of the whole society, the Cordilleran section having intimated its willingness to meet in Albu-
querque, if the general society were to meet there.

The society will hold no summer meeting this year, but the fellows have been invited to join with Section E of the American Association for the Advancement of Science in a field meeting near Plattsburgh, N. Y.
