■ The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objectives are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, to advance education in science, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER Montage of Voyager 2 images showing surface activity on Triton, Neptune's large satellite. Upper left: Triton's south polar region with dark streaks from extinct geysers. Upper right: Enhanced image of the remainder of the polar region. Lower left: Image of "east" plume, which was erupting from Triton's surface at the time of the Voyager 2 encounter, with both the plume (dark blue streak in left of center) and fine particles (probably nitrogen ice crystals) suspended in the atmosphere above the limb shown in deep blue. Lower right: Two different Voyager 2 images of the active "west" plume, projected to a common viewpoint and composited in red and blue. Parallax between the two images causes the plume and its cloud trail to appear as a horizontal red-blue streak. See pages 410 to 443.
