Making the best even better

Thousands of satisfied customers quickly established SuperRac, from Pharmacia LKB, as the world's best preparative fraction collector. But, as the leader in separation technology and advanced instrumentation, we wanted to make the best even better.

Now we proudly introduce SuperFrac™, an advanced, high capacity preparative LC fraction collector for all biomolecule purifications from laboratory to industrial scale.

High quality SuperFrac provides you with greater flexibility.

- Unique peak-slope detection allows collection of even poorly resolved peaks, regardless of drifting baselines; and compensates for peak broadening and asymmetry to give accurate peak cutting and tube change.
- Nine programmable time windows give greater control of your separation and permit collection of peaks of interest only, thus saving on tubes.
- Five different standard rack sizes and a programmable drop head for collection into free-standing vessels of any diameter.
- Other advanced functions include automatic column equilibration, dual-column adaptor, valve control and recycling.

Reliable performance, sturdy construction and versatile collection. SuperFrac, the even better fraction collector.

Now You Can Get the Full Text of Sci\text{ence} Online Through BRS Colleague

Every day there are new information sources that can complicate your search for up-to-the-minute data. That's why BRS Colleague is so vital to today's biomedical professional. Colleague is a complete, online information service that compiles the world's key biomedical data and presents it in a format that's both simple and efficient to search.

Your Link to the Full-Text of \text{Science}

The Comprehensive Core Medical Library (CCML) database is the cornerstone of Colleague. The CCML contains the full text of more than 20 textbooks and over 70 major journals including \text{Science}. Now, with Colleague’s new \text{LINK} command, a publication cited in MEDLINE can instantly be retrieved from the CCML. No other search service offers this feature.

Colleague’s collection of biomedical databases — more than 40 in all — includes biomedical industry favorites like BIOSIS and MEDLINE. Some, like AIDS Knowledgebase from San Francisco General Hospital, furnish data that is often not available in other sources. As a menu-driven service, Colleague is designed to be easily used by anyone who needs current information. All that is required is a personal computer and a modem. Best of all, Colleague is available 22 hours per day, with significant discounts after 6:00 p.m.

Time is a Dwindling Resource

In today's changing world of science, every minute is precious. You can't afford to be without the fastest, most up-to-date resources for information. With BRS Colleague, you never will.

Large marine ecosystems (LMEs) — the relatively narrow ocean zones that produce nearly 95% of the world’s useable marine biomass — are becoming increasingly stressed by both natural and anthropogenic changes, arousing major international concern about potentially negative ecologic and economic effects.

This volume, from a AAAS symposium, deals with the projected impacts of global changes on ocean productivity, and provides scientific, geographic, socio-economic, and legal arguments for managing LMEs as multinational units, in order to sustain biomass yields of major coastal regions.

This is an essential book for scientists and students in marine-related fields, and for conservationists, natural resource policymakers, and everyone concerned about the future of the world’s marine ecosystems.

Contents are as follows:

Perturbations and Yields of Large Marine Ecosystems

The Weddell Sea: A High Polar Ecosystem — Gotthilf Hempel
Environmental Influence on Recruitment and Biomass Yields in the Norwegian Sea Ecosystem — Bjornar Ellertsen, Petter Fossum, Per Solemdal, Svein Sundby, and Snorre Tilseth
Fluctuation in the Cod Biomass of the West Greenland Sea Ecosystem in Relation to Climate — Holger Hovgård and Erik Buch
The Caribbean Sea: A Large Marine Ecosystem in Crisis — William J. Richards and James A. Bohnsack
Productivity and Fisheries Potential of the Banda Sea Ecosystem — Jenne J. Zijlstra and Martien A. Baars

Biodynamics of Large Marine Ecosystems

Physical-Optical-Biological Scales Relevant to Recruitment in Large Marine Ecosystems — Thomas D. Dickey
Direct Simulation of the Effect of Turbulence on Planktonic Contact Rates — Thomas Osborn, Hidekatsu Yamazaki, and Kyle Squires

Application of Molecular Techniques to the Study of Marine Recruitment Problems — Dennis A. Powers, Fred W. Allendorf, and Thomas T. Chen
Application of Image Analysis in Demographic Studies of Marine Zooplankton in Large Marine Ecosystems — Mark S. Berman
Growth, Survival, and Recruitment in Large Marine Ecosystems — Geoffrey C. Lawrence

Theory and Management of Large Marine Ecosystems

Scaling Pattern and Process in Marine Ecosystems — Robert E. Ricklefs
Physical and Biological Scales and the Modelling of Predator-Prey Interactions in Large Marine Ecosystems — Simon A. Levin
Biomass Potential of Large Marine Ecosystems: A Systems Approach — Nicholas J. Bax and Taivo Laevastu
Productivity, Perturbations, and Options for Biomass Yields in Large Marine Ecosystems — Kenneth Sherman
Geographic Perspectives in the Management of Large Marine Ecosystems — Lewis M. Alexander
Interrelationships of Law in the Management of Large Marine Ecosystems — Martin H. Belsky

Order from: AAAS Books, Dept. A28, PO Box 753, Waldorf, MD 20604 (FAX: 301-843-0159). To order by phone (VISA/MasterCard only), call 301-645-5643 (9am-4pm ET) and ask for AAAS. Individuals must prepay or use VISA/MC. For institutional purchase orders, add $3.50 postage/handling. Please specify item #90-30S and allow 2-3 weeks for delivery. For shipments to CA, add applicable sales tax.
New from AAAS

**Molecules to Models**
*Advances in Neuroscience*

Edited by Katrina L. Kelner and Daniel E. Koshland, Jr.

This collection of current *Science* magazine articles in the neurosciences provides a comprehensive survey of the entire field. It is especially valuable for graduate students who want to gain a broad understanding of the neurosciences, and for neuroscientists who want to learn more about other areas of these disciplines. Contributors include William A. Catterall, Joseph B. Martin, Corey S. Goodman, Michael I. Posner, Terrence J. Sejnowski, Stephen G. Lisberger, Larry R. Squire, and many other well-known specialists in the field.

**Contents:**

I. Ion Channels: Multiple calcium channels and neuronal function; structure and function of voltage-sensitive ion channels; heterologous expression of excitability proteins—route to more specific drugs; genetic reconstitution of functional acetylcholine receptor channels in mouse fibroblasts; coupling of neurotransmitter receptors to ion channels in the brain; direct activation of mammalian atrial muscarinic potassium channels by GTP regulatory protein G_k; intrinsic electrophysiological properties of mammalian neurons—insights into central nervous system function.

II. Neural Development: Neuronal cytomechanics—the actin-based motility of growth cones; neural cell adhesion molecule (NCAM) as a regulator of cell-cell interactions; growth cone guidance in insects—fasciclin II is a member of the immunoglobulin superfamily; axon guidance and patterning of neuronal projections in vertebrates; specification of cerebral cortical areas; physiological basis for a theory of synapse modification.

III. Learning and Memory: Biochemistry of information storage in the nervous system; long-term synaptic potentiation; the neural basis for learning simple motor skills; neurobiology of learning and memory; mechanisms of memory.

IV. Cortical Function and Behavior: Three-dimensional representation and analysis of brain energy metabolism; behavioral neurophysiology—insights into seeing and grasping; neuronal population coding of movement direction; mental rotation of the neuronal population vector; localization of cognitive operations in the human brain.

V. Neural Modeling: Computing with neural circuits—a model; dynamic pattern generation in behavioral and neural systems; neural model of adaptive hand-eye coordination for single postures; parallel integration of vision modules; synthesizing a color algorithm from examples; inversion of sensory processing by feedback pathways—a model of visual cognitive functions; computational neuroscience; perspectives on cognitive neuroscience.

VI. Addiction: Neurogenetic adaptive mechanisms in alcoholism; cellular and molecular mechanisms of drug dependence; the biological tangle of drug addiction; breaking the addiction cycle.

VII. Neurological Disease: Molecular genetics—applications to the clinical neurosciences; brain imaging—applications in psychiatry.

Order from: AAAS Books, Dept. A8, P.O. Box 753, Waldorf, MD 20604 (FAX: 301-843-0159). To order by phone (VISA/MasterCard only), call 301-645-5643 (9am-4pm ET) and ask for AAAS. Individuals must prepay or use VISA/MC. For institutional purchase orders, add $3.50 postage/handling. Please specify item #89-17S, and allow 2-3 weeks for delivery.
