The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objectives are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, to advance education in science, and to increase public understanding and appreciation of the importance and purpose of the methods of science in human progress.
COVER  Site-specific recombination in mammalian cells. Transient expression of a yeast recombinase (FLP) in mammalian cells will either excise specific chromosomal sequences or target integration of extrachromosomal DNA to specific chromosomal sites. In this photomicrograph, excisional recombination permanently activated a chromosomally integrated β-galactosidase construct in the cells that contain a blue histochemical reaction product. See page 1351. [Photomicrograph by Stephen O’Gorman and Geoffrey Wahl]
