

COVER The parasitic ciliate *Lambornella clarki*, flanked by free-living protozoa and surrounded by larvae and pupae of its mosquito host, *Aedes sierrensis*. The impact of fatal *L. clarki* infections on host populations in treeholes varies with food availability and can result in greater host abundance and fecundity when resources are scarce. See page 185. [Illustration by Jan O. Washburn; color tinting by Julie Cherry]
