THE GENOME MAPS 1991
Pullout chart appearing on pages 247–262.
Plus special clip-out guide to genome data bases on pages 201–207.
COVER Model systems are vital for carrying scientists toward their goal of understanding the human genome. This issue presents a wall chart (pages 247 to 262) summarizing progress in mapping the human genome and one of the classic model systems, <i>Drosophila melanogaster</i>. In addition, there is a special news feature on genome databases (pages 201 to 207) as well as articles, reports, and a perspective relating to genome analysis. [Cover illustration by R. J. Kaufman, Charlotte, North Carolina]
