This Week in Science

9 Achievable Year's Resolutions

19 1992 preview: The year in funding, big projects, and science policy

20 Conservation Biology in the Fast Lane

22 Soviet Environment Slips Down the Agenda

24 Can There Be a Better Grade of "Pork?"

25 Plant Biotechnology Explored in Indianapolis

26 NRC Faults Science Behind Ozone Regs

27 Briefings: Twinkle Twinkle Little LED ■ Where HUGOing? ■ Invertebrates Need Love Too ■ Open Freezer at NCI

28 Microbes From 20,000 Feet Under the Sea ■ Superbugs in Waiting: Some Cautionary Tales

30 A Fall Harvest of Earth Science in San Francisco: Loma Prieta's Long Reach Was a Matter of Mirrors ■ Are Earthquakes a Ticking Clock for Los Angeles? ■ A Conundrum at Steens Mountain

32 Catching the Rhythm of The Bacterial Twist

33 Twin Study Links Genes to Homosexuality

34 Anything Goes at the Cell Biology Meeting: New Evidence Found for a Nuclear Matrix ■ Fruit Fly Learning Research Mushrooms ■ New Clues to How Bacteria Get Into Cells

39 Mechanisms of Transcriptional Timing in Drosophila: C. S. Thummel

41 America's Children: Economic Perspectives and Policy Options: V. R. Fuchs and D. M. Reklis

46 Fermi Surfaces, Fermi Liquids, and High-Temperature Superconductors: W. E. Pickett, H. Krakauer, R. E. Cohen, D. J. Singh

America's economic children: economic perspectives and policy options.
The calculated surfa...s for the charge carriers in the high-temperature superconductor YBa$_2$Cu$_3$O$_7$. Charge carriers can be electron-like or hole-like; blue indicates low-velocity, high-mass carriers, and red indicates high-velocity, low-mass carriers. This Fermi surface, first calculated theoretically, has recently been confirmed by several experimental spectroscopies. See page 46. [Image by R. E. Cohen with AVS 3.0 software; image printed on a Kodak XL7700 at the Naval Research Laboratory Connection Machine Facility]
