The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objectives are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, to advance education in science, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.
COVER  Fluorescence micrograph of neural cells that were generated in vitro from stem cells of the central nervous system of an adult mouse. Epidermal growth factor induced the proliferation of a multipotent progenitor. When given an appropriate substrate, these cells differentiated into neurons (orange) and astrocytes (green). See page 1707. [Micrograph by Samuel Weiss]
