Feds 'Abdicate' Fight Over Toxic Compounds • How to Catch a (Gravity) Wave • Crafoord Prize Goes to Two Geneticists • Leaving the Scene After Victory • NAS Director to Move to Carnegie, etc.

BOOK REVIEWS
Infrared Astronomy with ISO, reviewed by C. A. Reichman • Dynamics of the Standard Model, P. S. Drell • William Diller Matthew, Paleontologist, L. F. Laporte • Books Received

PRODUCTS & MATERIALS

32
A high-fidelity ocean model

25
A trial run for technology policy

38
Superconducting vortex
Neural network model of the primate motor cortex, with cells coding different directions of movement (purple balls with directional blue cones). Interactions between cells vary, ranging from strong excitatory (red, similar directions) to strong inhibitory (green, opposite directions), depending on the similarity of the preferred directions in a cell pair. See page 47. [Computer graphics, Masato Taira and Apostolos Georgopoulos. Production: Eugene Eubank, Medical Media Service, Minneapolis Veterans Affairs Medical Center]
