PERSPECTIVES

Board of Reviewing Editors

Downloaded from http://science.sciencemag.org/ on April 12, 2017
Space-filling representation of myosin subfragment-1, a molecular motor. The colors define the global organization of the polypeptide chains that constitute this molecule. This structure provides the basis for hypotheses for the molecular mechanism of muscle contraction. See pages 50 and 58 and the Perspective on page 35. [Graphics: Adam Steinberg and Ivan Raymond]
