From Antarctica and black holes to yeast genetics and zippers, a broad array of subjects are represented by the books covered in this special issue of *Science*. And in the opening group of essay reviews, some current and sometimes unsettling trends in thinking about science and its place in the world at large are examined. A full listing of the books reviewed appears on page 981. [Cover design: C. Faber Smith. Letters A, C, E, G, and U from Mercury Archives/The Image Bank]
