The "Ozone Deficit" Problem: $O_3(x, v \geq 26)$ from 226-nm Ozone Photodissociation 1831

Vertical Aluminophosphate Molecular Sieve Crystals Grown at Inorganic-Organic Interfaces 1839
S. Feng and T. Bein
This issue of Science examines how researchers overcome the challenges they meet along their career paths. Though presented in this image as a game, meeting those challenges—going from a postdoctoral to a permanent position, for instance, or running a productive laboratory—is a serious measure of success in the scientific life. See the News section, “Science Careers: Playing to Win,” beginning on page 1905. [Illustration: Linda C. Owens]
