SCIENCE • VOL. 265 • 30 SEPTEMBER 1994
We are entering a new age in which the results of the Human Genome Project will be increasingly applied to fundamental questions in molecular biology and medicine. This special issue contains a chart (page 2055) representing progress in the development of a complete human genetic map; in addition, a guest Editorial, a Research News report, Articles, Perspectives, a Policy Forum, and Reports highlight features of current research and future challenges.
