DEPARTMENTS

THIS WEEK IN SCIENCE 153
EDITORIAL 155
Chairman of the House Science Committee
LETTERS 157
“K. Duesberg Phenomenon”: What Does It Mean?: C. Andrews, K. Van Rompay and M. L. Marthas; R. C. Strohm; H. Rubin; J. A. Sonnabend; R. S. Root-Bernstein

SCIENCESCOPE 163

RANDOM SAMPLES 170
Sorry News for NIH Head-Hunt • Jury Still Out on Gulf Syndrome • Cutting RNA With DNA • High Price of Freedom • Hope for Ethanol Fuel? • Saving Our Roots From Roots, etc.

BOOK REVIEWS 264
Home Is Where the Wind Blows, reviewed by J. Faulkner • Long-Term Potentiation, R. Dingleyline • Ion Channels in the Cardiovascular System, S. Sorota • Vignettes • Books Received

PRODUCTS & MATERIALS 274
Fully open flowers of *Ansinckia vernicos*a, showing the reduced flower size typical of highly self-fertilizing species. Self-fertilization has evolved many times in plants. Extreme rates of self-fertilization provide an opportunity for estimating mutation rates to mildly deleterious alleles and the average dominance level of such mutations. These quantities and information on the reduced fitness of progeny from self-fertilization are important in genetic models of the evolution of sex, recombination, and self-fertilization rates. See page 228. [Photo: G. L’Heureux, McGill Biology Image Centre]
