Four Hubble Space Telescope (HST) images of Jupiter showing (left to right) the plume visible 5 minutes after the impact of fragment G of comet Shoemaker-Levy 9 on 18 July 1994 and the development of the impact site after 1.5 hours, 3 days, and 5 days. The impact sites of fragments L and S appear in the third and fourth images. See Articles beginning on page 1277. [Images: R. Evans, J. Trauger, H. Hammel, and the HST Comet Science Team and NASA]
