REPORTS 1005
ULYSSES
Ulysses Above the Sun’s South Pole:
An Introduction
E. J. Smith, R. G. Marsden, D. E. Page

The Heliospheric Magnetic Field Over the South Polar Region of the Sun
A. Balogh, E. J. Smith, B. T. Tsurutani, D. J. Southwood, R. J. Forsyth, T. S. Horbury

Over the Southern Solar Pole:
Low-Energy Interplanetary Charged Particles
The Ulysses spacecraft superimposed on a soft x-ray image of the sun. The dark regions on the sun and the gaps in the sun’s corona above the poles are coronal holes. The focus of the Ulysses mission is to explore the polar regions of the heliosphere. See the Reports in a special section beginning on page 1005 for results from Ulysses’s pass over the sun’s south pole. [Images: Courtesy of the European Space Agency]
