false-color image of earth from the goes-east satellite. ecologists have devised approaches to address pressing issues facing the planet, such as the extent of diminished biodiversity and resource depletion. the approaches range from small-scale lab simulations of eco-
systems to larger scale manipulations. in news stories and articles beginning on page 313, science examines these approaches and some of the answers they may yield to the "big questions." [photo: nrscc ltd./photo researchers; collage by c. faber-smith]
