Circular representations of the Haemophilus influenzae Rd genome, which has now been sequenced and assembled. The illustration depicts the locations of genes color coded by their role in the organism, the underlying clone scaffolding used to confirm the structures, locations of ribosomal RNA operons, and other global characteristics of the DNA sequence. See page 538 and the related News story (page 468) and Research Article (page 496). [Image: A. R. Kerlavage]
