False-color image illustrating fluorescence-labeled lymphocytes (blue and white circles, ~10 micrometers in diameter) that home after intravenous injection to high endothelial venules (in shades of red) in the lymphoid tissue (yellow) of an intestinal Peyer's patch. The image was captured by video epifluorescence microscopy of exteriorized mouse small intestine. See page 54, the special section beginning on page 50, and the related News story on page 28.
