How Much Is a Program Worth?

Science, an international weekly journal of science, contains articles of news, research, current events, and more. The journal is published by the American Association for the Advancement of Science (AAAS). This issue includes articles on Leukemia Studies, Chernobyl, and the Peopling of the Americas.
Quartz spear point (6.4 centimeters long, museum catalog number 1273) from the Tapajos River. Excavations in a painted cave at Monte Alegre, Brazil, at the confluence of the Tapajos and Amazon rivers uncovered stone tools, pigment, and food remains from a late Ice Age culture. These early foragers, distinct from the Clovis and Folsom cultures of North America, penetrated the equatorial lowlands of South America. See page 373 and the related News story on page 346.
