AAAS NEWS & NOTES 566
PRODUCTS & MATERIALS 570
The dark side of Saturn's rings, imaged by the Hubble Space Telescope on 21 November 1995. The main rings are illuminated by reflected sunlight and by sunlight diffusely transmitted through the translucent C ring and Cassini division. The outermost bright feature is the narrow, multisstranded F ring, seen here from Earth for the first time. Just inside the F ring, the Encke gap and the outer edge of the A ring are seen as a pair of faint bands. See page 509 and the related Reports (pages 516 and 518) and Perspective (page 507). [Image: P. D. Nicholson et al.]
