CONTENTS

The American Association for the Advancement of Science:
Opsonins and other Antibodies: PROFESSOR LUDVIG HERTZEN 241
The First Annual Conference of the Governors in New England: PROFESSOR JOHN CRAIG 248
Dr. Giuseppe Nobili 249
Darwin Anniversary Addresses at the University of Chicago 249
Scientific Notes and News 250
University and Educational News 254

Discussion and Correspondence:
Education and the Trades: DR. W. J. SPILLMAN. The Simple vs. the Complex in Scientific Theories: PROFESSOR FRANCIS NIPHER 255

Scientific Books:

Special Articles:
Hybrid Characters: ANNE M. LUTZ. Mucoer Cultures: DR. DAVID R. SUMSTINE 263
The Botanical Society of America: PROFESSOR DUNCAN S. JOHNSON 267
The Association of American Geographers: PROFESSOR A. P. BRIGHAM 273
The Society for Horticultural Science: C. P. CLOSE 274

Societies and Academies:
The Kansas Academy of Science. The Association of Teachers of Mathematics in the Middle States and Maryland: PROFESSOR EUGENE R. SMITH. The Biological Society of Washington: M. C. MARSH. The New York Academy of Sciences, Section of Astronomy, Physics and Chemistry: PROFESSOR W. CAMPBELL. Section of Geology and Mineralogy: PROFESSOR CHARLES P. BERKE. The American Chemical Society, Northeastern Section: KENNETH L. MARK. The Scientific Association of the Johns Hopkins University: C. K. SWARTZ 275

THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE
OPSONINS AND OTHER ANTIBODIES

Looking back, we find that only fifty years ago the conception of the nature of the processes that run their courses in the animal body in infectious diseases, generally speaking, were hazy and still often even mystical. Preceded by occasional brilliant anticipations, notably by Bretonneau in regard to the specificity of infectious processes and by Henle with respect to the interaction between parasite and host, the tireless, unmeasurably fruitful investigation of the modern era, introduced by Pasteur and Koch, has brought to light not only the actual causes of many infectious diseases, but a great deal also in regard to the means and reactions in the infected body whereby they are overcome. Of these defensive processes phagocytosis and the action and formation of that remarkable group of bodies known as antibodies have received and still receive the greatest amount of attention. Indeed, the discovery of the wonderful power of the animal organism to respond to the effects of certain substances by the production of new antibodies must be reckoned as one of the great events, not only in medicine, but in general biology. We feel best acquainted with the antitoxins, the lysins, the agglutinins, the precipitins and the opsonins, but this does not exhaust the list, which is a growing one. The estab-
