EDITORIAL
258 Engaging Iran by Glenn Schweitzer and Norman Neureiter
**MOLECULAR BIOLOGY**

A Shared Docking Motif in TRF1 and TRF2 Used for Differential Recruitment of Telomeric Proteins

Y. Chen et al.

Two similar members of the protein complex that protects the free ends of chromosomes have distinct binding sites for other complex members and accessory proteins.

10.1126/science.1151804

**CELL BIOLOGY**

Differential Regulation of Dynein and Kinesin Motor Proteins by Tau

R. Dixit, J. L. Ross, Y. E. Goldman, E. L. F. Holzbaur

The motor proteins dynein and kinesin both encounter the protein tau as they move along the microtubules; the former reverses direction, whereas the latter detaches.

10.1126/science.1152993

**MEDICINE**

Clonal Integration of a Polyomavirus in Human Merkel Cell Carcinoma

H. Feng, M. Shuda, Y. Chang, P. S. Moore

A rare, but highly aggressive, form of human skin cancer may be caused by a previously uncharacterized human polyomavirus.

10.1126/science.1152586

**GEOPHYSICS**

Rogue Mantle Helium and Neon

F. Albarède

Anomalously high ratios of $^{3}$He to $^{4}$He in the recycled basalts under ocean islands may result from helium diffusing in from more pristine, primitive mantle.

10.1126/science.1150060
REPORTS CONTINUED...

CHEMISTRY
Elementary Structural Motifs in a Random Network of Cytosine Adsorbed on a Gold(111) Surface
R. Otero et al.
Upon cooling, cytosine molecules on a gold surface form a disordered network based on the assembly of three elementary structural units, which may have analogies with glasses.

GEOPHYSICS
The Subduction Zone Flow Field from Seismic Anisotropy: A Global View
M. D. Long and P. G. Silver
Identification of the fastest seismic-wave propagation speed in subduction zones reveals that trench migration induces flow in the mantle above and beneath the subducting slab.

EVOLUTION
A Localized Negative Genetic Correlation Constrains Microevolution of Coat Color in Wild Sheep
J. Gratten et al.
Although the fitness of wild sheep increases with size, large, dark sheep are becoming rarer because color is genetically linked to genes that decrease fitness.

ECOLOGY
Coastal Ecosystem-Based Management with Nonlinear Ecological Functions and Values
E. B. Barbi er et al.
Taking into account the nonlinear relation between preserved habitat area and wave attenuation facilitates integrated management of coastal conservation and development.

DEVELOPMENTAL BIOLOGY
β-Catenin Defines Head Versus Tail Identity During Planarian Regeneration and Homeostasis
K. A. Gurley, J. C. Rink, A. S. Alvarado
Smed-β-catenin-1 Is Required for Anteroposterior Blastema Polarity in Planarian Regeneration
C. P. Petersen and P. W. Reddien
After the head or tail of a planarian is severed, the signal intensity of a prominent developmental signaling pathway controls whether a new head or tail regenerates.

GENETICS
Natural Genetic Variation in Lycopene Epsilon Cyclase Tapped for Maize Biofortification
C. E. Harjes et al.
Identification of the gene that controls vitamin A levels in maize will allow production of varieties that can improve global health without using transgenic methods.

CELL BIOLOGY
Dual Positive and Negative Regulation of Wingless Signaling by Adenomatous Polyposis Coli
C. M. Takacs et al.
An important developmental signaling molecule known to be a tumor suppressor can also activate growth, possibly explaining the responses of some cancers.

MEDICINE
Initiating and Cancer-Propagating Cells in TEL-AML1–Associated Childhood Leukemia
D. Hong et al.
Identical twins each carry preleukemic cells containing the characteristic chromosomal translocation, but only one undergoes further genetic changes and develops leukemia.

BIOCHEMISTRY
Effects of Molecular Memory and Bursting on Fluctuations in Gene Expression
J. M. Pedraza and J. Paulsson
A theory of stochastic gene expression suggests that noise can be modulated without feedback loops, complicating interpretation of single-cell experiments.
Building a New Heart From Old Tissue
When newborn cells are transplanted onto a “skeleton” of an adult heart, it becomes a pumping organ in the lab.

How to Make a Submarine Disappear
Researchers think objects can be made acoustically “invisible.”

High Prices Just Feel Good
Anticipation of quality activates our brain’s pleasure center.

Proteins escape from the ER surface.

Perspective: The Endoplasmic Reticulum Takes Center Stage in Cell Cycle Regulation
P. Fearon and O. Cohen-Fix
The ER appears to play a key role in controlling the spatial localization of proteins involved in the cell cycle.

ST NetWatch: UCSC Genome Bioinformatics
Analyze your gene of interest in a range of organisms using the tools available at the UCSC Genome Browser; in Bioinformatics Resources.

A change of heart.

Making a graceful exit.

Listen to the 18 January Science podcast to hear about genetic testing for psychiatric disorders, a possible viral culprit in a rare skin cancer, the legacy of water-powered mills, and more.
