A growing number of U.S. corporations are reacting to reports of poor student performance on national and international tests by contributing time and money to efforts aimed at improving math and science education in U.S. schools. To find out what they are doing and how well it’s working, see page 1030.

EDITORIAL
1009 Confidential Review—or Not? by Donald Kennedy

LETTERS
The Legitimacy of Genetic Ancestry Tests
T. Frudakis Response D. A. Bolnick et al.

CORRECTIONS AND CLARIFICATIONS
1042

BOOKS ET AL.
The Biology of Human Longevity Inflammation, Nutrition, and Aging in the Evolution of Lifespans C. E. Finch, reviewed by D. J. Holmes
Did My Neurons Make Me Do It? Philosophical and Neurobiological Perspectives on Moral Responsibility and Free Will N. Murphy and W. S. Brown, reviewed by T. S. Ganson

POLICY FORUM
The Demography of Educational Attainment and Economic Growth W. Lutz, J. C. Cuaresma, W. Sanderson

PERSPECTIVES
The Cutting Edge of Plasma Etching T. Lill and O. Joubert
How to Move an Atom O. Custance and S. Morita >> Report p. 1066
Learning with Regret M. D. Cohen >> Report p. 1111
Bioinspired Structural Materials C. Ortiz and M. C. Boyce >> Report p. 1069
Retrospective: Judah Folkman (1933–2008) D. Hanahan and R. A. Weinberg

NEWS OF THE WEEK

MOLECULAR BIOLOGY
Selective Blockade of MicroRNA Processing by Lin-28
S. R. Viswanathan, G. Q. Daley, R. I. Gregory
A protein necessary for reprogramming skin fibroblasts to pluripotent stem cells is an RNA-binding protein that normally inhibits microRNA processing in embryonic cells.
10.1126/science.1154040

CELL BIOLOGY
Video-Rate Far-Field Optical Nanoscopy Dissects Synaptic Vesicle Movement
V. Westphal et al.
Sequential subdiffraction resolution images of fluorescently labeled synaptic vesicles in live cells reveal that they exhibit several distinct movement patterns.
10.1126/science.1154228

ASTROPHYSICS
Magnetar-like Emission from the Young Pulsar in Kes 75
F. P. Gavriil et al.
A pulsar exhibits x-ray bursts like that seen only in magnetars, which have ultrahigh magnetic fields, implying that neutron stars exhibit a continuum of magnetic activity.
10.1126/science.1153465

PHYSICS
Energy Gaps and Kohn Anomalies in Elemental Superconductors
P. Aynajian et al.
High-resolution neutron scattering experiments reveal behavior in pure lead and niobium superconductors beyond that described by the standard theoretical framework.
10.1126/science.1154115

TECHNICAL COMMENT ABSTRACTS
ECOLOGY
Comment on "International Conservation Policy Delivers Benefits for Birds in Europe"
R. Rodríguez-Muñoz, A. F. Ojanguren, T. Tregenza

REVIEW
CHEMISTRY
Nuclear Coupling and Polarization in Molecular Transport Junctions: Beyond Tunneling to Function
M. Galperin, M. A. Ratner, A. Nitzan, A. Troisi

BREVIA
DEVELOPMENTAL BIOLOGY
Juvenile Hormone Regulates Butterfly Larval Pattern Switches
R. Futahashi and H. Fujiwara
In swallowtail butterflies, a hormone regulates a dramatic developmental shift as the young caterpillars, which mimic bird droppings, grow into the green cryptic larva.

REPORTS
PHYSICS
A Photon Turnstile Dynamically Regulated by One Atom
B. Dayan et al.
A single atom interacting with an optical microresonator can convert an influx of photons into a regular output of single photons.

MATERIALS SCIENCE
The Force Needed to Move an Atom on a Surface
M. Ternes et al.
An atomic force microscope can be tuned to measure the lateral and vertical forces required to move atoms or molecules on a surface, thus probing the bond strengths. >> Perspective p. 1051

MATERIALS SCIENCE
Bioinspired Design and Assembly of Platelet Reinforced Polymer Films
L. J. Bonderer, A. R. Studart, L. J. Gauckler
In a design borrowed from biomaterials, ceramic plates less than 1 millimeter thick are sequentially deposited between flexible organic layers to yield strong, flexible films. >> Perspective p. 1053

MATERIALS SCIENCE
Atomic-Scale Chemical Imaging of Composition and Bonding by Aberration-Corrected Microscopy
D. A. Muller et al.
Correcting electron optical aberrations to fifth order increases the beam current of an electron microscope enough for atomic-scale mapping of chemical species and bonds.
emissions have already greatly changed
1001
VOL 319 22 FEBRUARY 2008
Induction System
H. Feng, M. Shuda, Y. Chang, P. S. Moore
A rare, but highly aggressive, form of human skin cancer may be
caused by a previously uncharacterized human polyomavirus.

DIFFERENTIAL REGULATION OF DYNEYIN AND KINESIN
MOLECULAR BIOLOGY
R. Dixit, J. L. Ross, E. L. F. Holzbaur
When molecular motors move along microtubules, they encounter
the bound protein tau; the dynein motor then reverses direction,
whereas the kinesin motor detaches.

A SHARED DOCKING MOTIF IN TRF1 AND TRF2 USED FOR
MOLECULAR BIOLOGY
Y. Chen et al.
Two similar members of the protein complex that protects the free
ends of chromosomes have distinct binding sites for other complex
members and accessory proteins.

RAPID NEURAL CODING IN THE RETINA WITH RELATIVE
SPIKE LATENCIES
PSYCHOLOGY
T. Gollisch and M. Meister
In salamanders, ganglion cells, which project from the retina to the
brain, use the relative timing of single spikes in each cell to quickly
encode a visual scene.

MOLECULAR GENETICS
N. Matsuo, L. Reijmers, M. Mayford
Mushroom-shaped synaptic spines activated during learning
preferentially capture newly synthesized glutamate receptors,
which may contribute to memory storage.

A CHAIN OF COLONIES AS THEY RADIATED OUT FROM AFRICA
GENETICS
J. Z. Li et al.
Analysis of variation in 51 human populations reveals details
of European subpopulations and confirms that humans formed
a chain of colonies as they radiated out from Africa.

EXTENDING EARTHQUAKES’ REACH THROUGH CASCADEING
GEOPHYSICS
D. Marsan and O. Lengliné
A model of earthquake connectivity implies that small quakes may
collectively trigger more quakes than larger ones and that cascades
of triggered quakes are common.

EXTENDING EARTHQUAKES’ REACH THROUGH CASCADEING
GEOPHYSICS
D. Marsan and O. Lengliné
A model of earthquake connectivity implies that small quakes may
collectively trigger more quakes than larger ones and that cascades
of triggered quakes are common.
The purple sea urchin is headed for trouble.

PERSPECTIVE: Context-Dependent Activation or Inhibition of Wnt–β-Catenin Signaling by Kremen
C. S. Cselenyi and E. Lee
The effect of Kremen 2 on Wnt signaling depends on the presence or absence of the Wnt antagonist Dickkopf1.

PERSPECTIVE: A Cytoskeletal Platform for Local Translation in Axons
F. P. G. Van Horck and C. E. Holt
Mutual interactions between the cytoskeleton and local translation may mediate growth cone steering response.

PODCAST
N. R. Gough and J. F. Foley
Listen to a discussion about the signals that generate fat cells.

Benefiting from life’s setbacks.

Opportunities: Master of Disaster
P. Fiske
Personal and professional setbacks can open the door to new opportunities.

Mastering Your Ph.D.: Preparing for Your Post-Ph.D. Career
B. Noordam and P. Gosling
Find out how to find a job that suits you, inside or outside academia.

Alone in the Field
E. Pain
Spain’s science funding agency rejected Eduardo Moreno’s idea, but it still won him a grant from the European Research Council.
