**ORIGIN 8** gives you a complete data analysis and graphing workspace with unsurpassed power and flexibility. Origin 8 streamlines your work with tightly integrated workbooks, publication-quality graphics and standardized analysis tools—all in a single, easy-to-use workspace.

Use **ORIGIN 8**’s powerful, intuitive tools to:
- **Consolidate and manage** imported data, images, database query results, analysis reports, and graphs using multi-sheet workbooks with rich-text formatting.
- **Compute** statistics and perform curve fitting, signal processing, peak analysis and image processing.
- **Automatically recalculate** analysis results as parameters are changed or data updated.
- **Quickly review** the profile of any data set simply by glancing at sparklines.
- **Create publication-quality graphs**, annotated with text and drawings.
- **Export** in a variety of formats—EPS, PDF, TIFF, and more, or copy-paste to other applications.

Experience **ORIGIN 8** for yourself.

OEM and Student Versions Available
The human EpCAM PlusCellect Kit (Catalog # PLS960) was used to enrich for EpCAM⁺ cells in a culture containing human whole blood cells spiked with MCF-7 human breast cancer cells. Cells were stained with PE-conjugated anti-human EpCAM detection antibody both before (green) and after (purple) selection.

It’s time to bring healthcare into the Internet Age.

Let’s do it together.

Microsoft is calling on research and academic health institutions to join us in the search for new, innovative health applications that accelerate connections between consumers and physicians and the information they need to make informed and personalized decisions.

Working together, we can empower physicians and patients with the solutions they need to make a difference.

Building on the Microsoft® HealthVault™ consumer health platform, you have the potential to enable fundamentally new and innovative scenarios.

Submit your ideas to the HealthVault Be Well Fund and join our goal of identifying and developing new, yet-to-be-imagined Web applications that will help people live longer, healthier lives.

For more information on how your institution can submit a proposal to the HealthVault Be Well Fund, visit: www.healthvault.com/fund
Helping you to grow the future of cell therapy

As our offering continues to grow, so does our commitment to support you. The Ficoll-Paque™ family now includes GMP manufactured Ficoll-Paque PREMIUM, and more technically advanced products are being added to our portfolio. We provide state-of-the-art technology for umbilical cord blood processing with the AXP AutoXpress™ Platform *, and BioArchive™ System* for cryopreservation together with Bio InSite™, a 24-hour online service package. The Wave Bioreactor™ for cell expansion is the latest addition to our product portfolio.

With over 30 years of experience in the cell therapy industry, GE Healthcare continues to lead the way, producing reliable and trusted products. And, as we continue to make advancements, we can help you turn your scientific ideas into reality. This way we can bring science to life and help transform healthcare.

At GE Healthcare we like to call this Cell Therapy Re-imagined. Visit www.gelifesciences.com/cellprep
The Caspase-Glo® 3/7 Assay has become the gold standard method for monitoring apoptosis in cultured cells. The single-reagent protocol and bioluminescent readout deliver unparalleled accuracy across a wide dynamic range. Whether you are trying to understand cancer, developmental biology or drug toxicity, the Caspase-Glo® 3/7 Assay will simplify your discovery process.

For details, and to qualify for a FREE SAMPLE visit www.promega.com/caspaseglo
We have created an integrated solution that propels your PCR to unbeatable performance.

♣ Speed – Significantly faster than any other combination

❤ Fidelity – Superior accuracy over Pfu and Taq based systems

♠ Yield – Higher efficiency amplification results in more product

◆ Specificity – Reduced levels of primer-dimers and false-primed products

An integrated tripartite solution:

Competent Cells from New England Biolabs

Completing Your Cloning Needs

Make the switch to competent cells from New England Biolabs to help bring success to your research. Our expanded line of competent cells includes a variety of strains for cloning and expression, as well as strains with unique properties (see chart). For added convenience we offer a choice of efficiencies, formats and customized packaging. Now you can digest, ligate and transform with reagents from the name you trust.

Advantages:
- Extremely high transformation efficiencies
- Phage T1 resistance (fhuA2) preserves clone integrity
- Choice of protocols: high efficiency or 5 minute transformation
- Nonspecific endonuclease activity eliminated, resulting in highest quality plasmid preparations
- Express difficult or toxic proteins with T7 Express strains containing lacIq and/or a novel lysY variant
- Obtain colonies faster than any other commercial strain with NEB Turbo
- SOC Outgrowth Media and pUC19 Control Plasmid included
- Free of animal products

For more information and our international distribution network, please visit www.neb.com/literaturerequest

Drive your cancer research discoveries with Roche Applied Science’s innovative, accurate, and versatile instruments and applications. We combine world-class technologies for real-time PCR, microarrays, and DNA sequencing to provide you with the most comprehensive cancer research toolkit available:

**LightCycler® 480 Real-Time PCR System** — Investigate genetic and epigenetic variation patterns with powerful real-time PCR applications, including high-resolution mutation screening, HRM methylation detection (Figure 1), and quantitative ChIP analysis.

**NimbleGen® DNA Microarrays** — Target and evaluate oncogenes and other regions of interest with long oligos at high resolution (2.1 million probes).

**Genome Sequencer FLX System** — Identify rare (<1%) cancer-associated somatic mutations at the molecular level from heterogeneous tissue samples.

**Discover... Analyze... Validate.**

The power of small x8

1µl analysis — increased throughput
The NanoDrop® ND-8000 8-Sample Spectrophotometer

1µl samples. No cuvettes. No dilutions.

Revolutionary technology. **8 readings in under 30 seconds.**
The NEW NanoDrop® ND-8000 8-Sample Spectrophotometer is powerful — eight 1µl samples at once.

Full spectrum UV/Vis analysis of 1µl samples for quantitation, purity assessments and more: nucleic acids, microarrays, proteins and general spectrophotometry.

Measurement is quick and easy — pipette up to eight samples and measure. Each sample is read using two path lengths to achieve an extensive dynamic range (e.g., 2-3700 ng/µl dsDNA), virtually eliminating the need for dilutions. Then just a quick wipe clean and you’re ready for your next samples. What could be easier — or more powerful?

And for the power of small in single-sample absorbance or fluorescent measurements, check out the NanoDrop® ND-1000 Spectrophotometer or the NanoDrop® ND-3300 Fluorospectrometer (ultra low fluorescent detection limit of sample mass — e.g., 2 pg dsDNA).

Ready to experience the power of small x8? Test a NanoDrop® ND-8000 8-Sample Spectrophotometer in your own lab.

FREE one-week evaluation [www.nanodrop.com](http://www.nanodrop.com) 302.479.7707

Now Part of Thermo Fisher Scientific
Bring your precious samples in from the cold.

Now analyze gene expression from LCM, FFPE, and single cells.

TaqMan® PreAmp Master Mix enables analysis of gene expression from minute quantities of RNA. Analyze flash frozen tissue samples, laser-capture microdissections, formalin-fixed paraffin-embedded tissues, needle biopsies and single cells. TaqMan PreAmp Master Mix preamplifies all cDNA targets equally, without introducing bias. Study your low-expressing genes from these samples for the first time. It’s the fast, accurate way to turn precious amounts of sample into hundreds of real-time PCR reactions—and generate high-quality, reproducible gene expression results.

- Preserves cDNA target equilibrium without preamplification bias
- Uses pooled TaqMan® Gene Expression Assays as primers to preamplify gene targets
- Multiplexes up to 100 gene expression targets
- Simple workflow requires minimal hands-on time

See a customer presentation on PreAmp Master Mix at www.appliedbiosystems.com/preampwebinar
What’s the quickest link to advances in the world of science?

AAAS Advances—the free monthly e-newsletter especially for AAAS members.

Each month, AAAS members keep up with the speed of science via a quick click on the newsletter Advances.

Look for the next issue of Advances delivered to your inbox midmonth. Look up archived issues at aaas.org/advances.

Features include:
- A special message to members from Alan Leshner, AAAS CEO
- Timely news on US and international AAAS Initiatives
- Just-released reports and publications
- Future workshops and meetings
- Career-advancing information
- AAAS members-only benefits

aaas.org/advances

Advances - The Monthly Newsletter for AAAS Members

In this issue:
Message to Members: Advancing Science Careers Globally
News to Note: New Officers, UN Climate Change
Advancing Science, Serving Society: US R&D Funding
Science Careers: Four UK Events, Cancer Research
Announcements: AAAS Forum on S&T Policy, Global R
doing of Interest and events

Message to Members
Advancing Science Careers Globally

Dear AAAS Member,

To advance science, we must first advance the training and retention of a talented workforce. AAAS.

This year, we have initiated an even stronger International Science Career Development Network, with forty programs across the U.S. and other nations including Germany, Sweden and France. The Science Career Development Network is designed to help leaders develop the skills to transform careers into productive ones in research, teaching, management, peer review processes, and other responsibilities. The courses, for young scientists, are hands-on opportunities to hone skills and meet their needs in universities and during scientific conferences.

Check the calendar of events planned around the network. For more information, visit www.sciencecareers.org, and look for the journal Science's special science career development network section of this newsletter.

Increasing science to serve society and public policy...
You’re looking forward to a career where your education and talents can make a difference. You’d like to find a small-company environment where you can build your professional skills in a supportive atmosphere of teamwork and innovation. At the same time, you’re attracted to the stability, world-class leadership development, and career opportunities that can be found with a global business leader.

Who says you have to choose?

Johnson & Johnson companies celebrate and promote small-company environments that respond to the needs of individuals and teams. Through more than 250 operating companies, we are the world’s most comprehensive and broadly based manufacturer of health care products for the consumer, pharmaceutical, and medical devices and diagnostics markets.

Discover the many small-company environments behind the big-company impact of the Johnson & Johnson companies.

Eppendorf & Science Prize for Neurobiology

2007 Winner
Rachel Wilson, Ph.D.
Assistant Professor of Neurobiology
Harvard Medical School

Deadline for entries
June 15, 2008

For more information
www.eppendorf.com/prize

This annual international research prize recognizes accomplishments in neurobiology research based on methods of molecular and cell biology. The winner and finalists are selected by a committee of independent scientists, chaired by the Editor-in-Chief of Science. Past winners include postdoctoral scholars and assistant professors.

To be eligible, you must be 35 years of age or younger. If you’re selected as this year’s winner, you will receive $25,000, have your work published in the prestigious journal Science and be invited to visit Eppendorf in Hamburg, Germany.
Submit your paper starting April 14 to: stke.sciencemag.org/about/help/research.dtl

From the publishers of Science, Science Signaling, formerly known as Science’s STKE, will add original research starting September 2008. Each week the journal will publish leading-edge findings in addition to the current features, including Perspectives, Reviews, Protocols, Meeting Reports, Book Reviews, Teaching Resources, and the Database of Cell Signaling.

Science Signaling showcases high-impact research in cellular regulation in such fields as molecular biology, development, immunology, neuroscience, microbiology, physiology and medicine, pharmacology, biochemistry, cell biology, bioinformatics, and systems biology. Submit your research that provides new concepts and new understanding of biological signal transduction for consideration.

Subscribing to Science Signaling ensures that you and your lab have the latest cell signaling resources. From basic science to design of therapeutics, from molecules to networks and systems design, read the best source – Science Signaling.
What makes an international leader?

Norman P. Neureiter
Awarded the 2008 Public Welfare Medal by the US National Academy of Sciences
Director, AAAS Center for Science, Technology, and Security Policy

Fulfilling a global mission to advance science and serve society.
In bestowing its prestigious Public Welfare Medal, the US National Academy of Sciences recognized Norman P. Neureiter for “spurring international cooperation” and “integrating science and technology into foreign policy” while serving as the first S&T adviser to a US secretary of state. His three-year term began in 2000 under Madeleine Albright and continued under Colin Powell.

We congratulate our valued colleague who, since 2004, has continued his distinguished career in global affairs as director of the AAAS Center for Science, Technology, and Security Policy. He epitomizes the AAAS leadership role in advancing science and serving society internationally.

High Throughput Cellular Analysis
The Cell Lab Quanta SC MPL Flow Cytometer can be integrated into a cell culture system to provide data and cellular growth parameters for the evaluation of clone selection, cell expansion, and protein expression results. The Quanta SC MPL can be integrated online with other peripheral devices and a robotic arm that moves cell culture plates to the flow cytometer for analysis. Data from the analysis is automatically captured by the instrument’s software for real-time and subsequent analysis and interpretation. The integration of this advanced flow cytometer provides an expanded range of measurements for high throughput, walkaway cell analyses, including cell count and viability, apoptosis, cell cycle, and cell surface marker. The Quanta SC features three-color fluorescence, side scatter, electronic volume, and absolute count measurements along with easy-to-use software, automated color compensation, and multiple excitation wavelengths, including ultraviolet. It can analyze a sample in as little as 30 seconds.

Beckman Coulter

Waterborne Contamination Prevention
The AquaTec water preservation cell is for prevention of waterborne contamination in carbon dioxide incubators and water baths. The AquaTec provides up to six months of protection from more than 600 types of bacteria, viruses, molds, and fungi without the use of harsh chemicals. It is designed for all types of laboratory water and is suitable for use in equipment from any manufacturer across a broad range of biological research temperature environments. One-three inch AquaTec cell placed into the water reservoir provides long-lasting disinfection without the need for mixing or measuring potentially hazardous materials. Self-regulation maintains the correct level of anti-microbial concentration regardless of water level, negating the need for constant monitoring and testing. The AquaTec has optional suction cups for fixation in the water bath or incubator reservoir.

ThermoFisher

PCR Competent Cells
The ExCyto PCR (polymerase chain reaction) Competent Cells express a thermostable DNA polymerase, offering a reliable, fast, and inexpensive way to screen transformed colonies. The user simply transforms ExCyto PCR Cells using any E. coli vector, plates and incubates overnight, picks colonies, adds them to the provided reaction mix with primers, and cycles. ExCyto PCR eliminates minipreps and the need for a purified, exogenous DNA polymerase for single-colony PCR. Amplification is robust even with single-copy vectors. Amplicons up to 5 kb can be directly sequenced without purification.

Lucigen

Nucleic Acid Purification Automation
The epMotion is an automated liquid handling system with ready-to-go methods for automated nucleic acid purification. The epMotion Plug’n’Prep technology offers pretested methods for walkaway DNA and RNA purification using a choice of more than 25 different protocols. The instrument gives researchers freedom to choose any purification technology: Invitrogen, Promega, Macherey-Nagel, Invitek, and 5 Prime have all developed epMotion methods. New users can simply select their preferred brand and type of extraction kit, download the method from epMotion.com, and transfer the method data file to the epMotion. No further adaptation is needed, and setup time is less than an hour. A wide range of applications is available, including genomic DNA extraction from blood, tissue cultured cells, and bacteria; isolation of total RNA, viral DNA, and RNA; plasmid purification; and polymerase chain reaction cleanup.

Thermocycler Workstation
The BLM-TC Planar Lipid Bilayer Thermocycler Workstation is a Peltier-driven platform that provides tight and reproducible temperature control to facilitate the measurement of single-channel events at temperatures between 5° and 50°C. This device heats and cools at an average rate of 5°C per minute and can maintain a temperature to within 0.2°C of the set temperature.

Eppendorf
For information +49 40 538 01 640

Thermostable Polymerase
The PyroPhage 3173 DNA Polymerase is cloned from thermophilic phage infecting boiling hot springs thermophiles. It is available as the Wild Type enzyme and as an Exonuclease Minus mutant. It is more effective than polymerase chain reaction (PCR) enzymes in amplifying certain templates. Its efficient reverse transcription activity enables single-tube, single-enzyme reverse-transcription PCR, and potent strand-displacing activity allows for isothermal DNA synthesis through double-stranded DNA. The enzyme initiates efficiently at nick; therefore, DNA synthesis can be initiated either with primers or at a nick introduced by site-specific nicking enzymes.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by Science or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.
SYBR® Green

SYBR® Premix Ex Taq™

SYBR® Premix Ex Taq™ (Perfect Real Time) delivers exceptional real time PCR results quickly and easily.

- **Easy-to-Use:** convenient premix formula.
- **Less Optimization:** great for first screens.
- **Versatile:** use on any real-time PCR instrument.
- **Low C_T Values:** high sensitivity with detection of as few as 10 copies.
- **Precise Quantification:** 2-fold difference can be accurately detected.
- **Fast:** works with high speed qPCR instruments.

Also Available in a Premix for TaqMan® Probe Detection

**KODAK** In-Vivo Multispectral Imaging System FX:
Enables advanced *unmixing of multiple fluorochromes*.

- Automated protocols for precise identification, unmixing and analysis of fluorescent signals
- Sophisticated software algorithms remove autofluorescence for improved signal-to-noise and detection sensitivity
- 29-position excitation filters ranging from 380-780 nm
- Multimodal capabilities include white light, multiwavelength fluorescence, UV fluorescence, luminescence, radioisotopic and x-ray imaging
- Automated digital system with 4MP CCD and 10x optical zoom lens deliver powerful imaging results

While the KODAK In-Vivo Multispectral Imaging System FX can be used for in vivo and in vitro molecular imaging of materials, researchers should be aware that the methods of preparing and viewing the materials for molecular imaging may be subject to various patent rights. All images were captured using KODAK Molecular Imaging Products.
