ANTHROPOLOGY
DNA from Pre-Clovis Human Coprolites in Oregon, North America
M. T. P. Gilbert et al.
Fossil human feces from an Oregon cave predate the Clovis culture by about 1000 years, and DNA from the feces marks the presence of Native Americans in North America. >> News story p. 37 10.1126/science.1154116

PHYSICS
BREVIA: Fine Structure Constant Defines Visual Transparency of Graphene
R. R. Nair et al.
The transparency of sheets of graphene is quantized in a way that allows a simple determination of the fine structure constant, which relates light and relativistic electrons. 10.1126/science.1156965

MEDICINE
ROS-Generating Mitochondrial DNA Mutations Can Regulate Tumor Cell Metastasis
K. Ishikawa et al.
Mutations in mitochondrial DNA that cause enhanced production of reactive oxygen species can increase the propensity of tumor cells to metastasize. 10.1126/science.1156906

ARCHAEOLOGY
Aztec Arithmetic Revisited: Land-Area Algorithms and Acolhua Congruence Arithmetic
B. J. Williams and M. del Carmen Jorge y Jorge
Analysis of ancient property records shows that the Aztecs used common algorithms and a distance standard for calculating land area and specific symbols to represent fractions.

BIOCHEMISTRY
Crystal Structure of a Self-Spliced Group II Intron
N. Toor, K. S. Keating, S. D. Taylor, A. M. Pyle
The autocatalytic group II intron contains a network of unusual tertiary RNA interactions that form a metalloribozyme active site with parallels to eukaryotic spliceosomes. >> Perspective p. 56

ECOLOGY
Bats Limit Insects in a Neotropical Agroforestry System
K. Williams-Guillén, I. Perfecto, J. Vandermeer
Exclosure experiments show that bats contribute to the reduction of insects on coffee plants more than has been appreciated and to a comparable degree as birds.

ECOLOGY
Bats Limit Arthropods and Herbivory in a Tropical Forest
M. B. Kalka, A. R. Smith, E. K. V. Kalko
In a lowland tropical forest, bats consume insect herbivores on understory plants at least as much as birds do, thereby also indirectly limiting damage to the plants.

CHEMISTRY
The Roles of Subsurface Carbon and Hydrogen in Palladium-Catalyzed Alkyne Hydrogenation
D. Teschner et al.
The population of hydrogen and carbon within a palladium catalyst governs the hydrogenation of alkynes on its surface.
REPORTS CONTINUED...

GEOCHEMISTRY
The Electrical Conductivity of Post-Perovskite in Earth’s D* Layer
K. Ohta et al.
A major silicate mineral deep in Earth’s mantle has a high electrical conductivity, causing a sufficiently strong coupling with the core to explain variations in Earth’s rotation.

ASTRONOMY
Graphite Whiskers in CV3 Meteorites
M. Fries and A. Steele
Graphite whiskers, a naturally occurring allotrope of carbon, have been found in primitive grains in several meteorites and may explain spectral features of supernovae.

>> Perspective p. 61

CLIMATE CHANGE
Covariant Glacial-Interglacial Dust Fluxes in the Equatorial Pacific and Antarctica
G. Winckler et al.
A 500,000-year record shows that more dust, which provides iron and other nutrients, was blown into the equatorial Pacific during glacial periods than during warm periods.

MOLECULAR BIOLOGY
Selective Blockade of MicroRNA Processing by Lin-28
S. R. Viswanathan, G. Q. Daley, R. I. Gregory
A protein necessary for reprogramming skin fibroblasts to pluripotent stem cells is an RNA-binding protein that normally inhibits microRNA processing in embryonic cells.

>> Perspective p. 58

MICROBIOLOGY
Bacteria Subsisting on Antibiotics
G. Dantas et al.
A wide range of bacteria in the environment, many related to human pathogens, are both resistant to antibiotics and consume them as their only source of carbon for growth.

>> News story p. 33

CELL BIOLOGY
Reversible Compartmentalization of de Novo Purine Biosynthetic Complexes in Living Cells
S. An, R. Kumar, E. D. Sheets, S. J. Benkovic
The enzymes needed for purine biosynthesis cluster in the cytoplasm when cells are depleted of purine but dissociate when the demand for purine is low.

BIOCHEMISTRY
Single-Molecule DNA Sequencing of a Viral Genome
T. D. Harris et al.
The M13 viral genome has been resequenced by a single-molecule method that allows simultaneous sequencing of 280,000 DNA strands of 25 bases with 100 percent coverage.

NEUROSCIENCE
Entrainment of Neuronal Oscillations as a Mechanism of Attentional Selection
P. Lakatos et al.
In monkeys that are paying attention to a rhythmic stimulus, brain oscillations become tuned to the stimulus so that the response in the visual cortex is enhanced.

NEUROSCIENCE
Episodic-Like Memory in Rats: Is It Based on When or How Long Ago?
W. A. Roberts et al.
Unlike humans, who can place past events within a temporal framework, rats can only remember when an event happened by tracking the time elapsed since its occurrence.
SCIENCE NOW
