CLIMATE CHANGE
The Sensitivity of Polar Ozone Depletion to Proposed Geoengineering Schemes
S. Tilmes, R. Müller, R. Salawitch
Calculations imply that injection of sulfur into the atmosphere to counteract global warming would threaten the ozone layer, as occurred after the Mount Pinatubo eruption.
10.1126/science.1153966

IMMUNOLOGY
Coordination of Early Protective Immunity to Viral Infection by Regulatory T Cells
J. M. Lund, L. Hsing, T. T. Pham, A. Y. Rudensky
In mice infected with herpes virus, an usually immunosuppressive T cell is necessary for rapid arrival of immune cells and elevated cytokine levels at the site of infection.

POLICY FORUM
Harvesting Data from Genetically Engineered Crops M. Marvier et al.

EDUCATION FORUM

PLANT SCIENCE
Cell Identity Mediates the Response of Arabidopsis Roots to Abiotic Stress
J. R. Dinneny et al.
In Arabidopsis root tips exposed to high salinity or iron deficiency, clusters of genes are induced that are unique to one or both of these stress responses.
10.1126/science.1153795

PLANT SCIENCE
Genome-Scale Proteomics Reveals Arabidopsis thaliana Gene Models and Proteome Dynamics
K. Baerenfaller et al.
The Arabidopsis proteome shifts as the plant develops, and proteins not predicted from genome analysis, some derived from introns and pseudogenes, are expressed.

BREVIA
PALEONTOLOGY
Molecular Phylogenetics of Mastodon and Tyrannosaurus rex
C. L. Organ et al.
Phylogenetic analyses of collagen protein fragments from fossils and 21 extant organisms group mastodons with elephants and Tyrannosaurus rex with birds.

RESEARCH ARTICLE
GEOCHEMISTRY
Synchronizing Rock Clocks of Earth History
K. F. Kuiper et al.
Tying an argon-argon dating standard to a section dated with Earth’s orbital variations yields older ages for the standard and for other events, including the K-T boundary. >> News story p. 434

REPORTS
MATERIALS SCIENCE
Sign Change of Poisson’s Ratio for Carbon Nanotube Sheets
L. J. Hall et al.
When stretched, a sheet made of carbon nanotubes contracts or expands in the opposite direction, depending on how many multiwalled tubes form zig-zag networks.
MATERIALS SCIENCE

Stretchable and Foldable Silicon Integrated Circuits
D.-H. Kim et al.
High-performance, bendable, and stretchable electronic devices are fabricated on an elastic plastic substrate by placing the critical electronic components in the neutral bending plane.

APPLIED PHYSICS

Near-Field Plates: Subdiffraction Focusing with Patterned Surfaces
A. Grbic, L. Jiang, R. Merlin
A grating near the focal plane can focus microwave radiation to a spot size well below the diffraction limit.

PLANETARY SCIENCE

Ancient Asteroids Enriched in Refractory Inclusions
J. M. Sunshine et al.
Spectral data imply that some asteroids contain higher concentrations of early solar system grains and materials than are found in any sampled meteorite.

CLIMATE CHANGE

Human-Induced Arctic Moistening
S.-K. Min, X. Zhang, F. Zwiers
Comparison of 22 climate models to observations shows that human activity has increased precipitation in the Arctic over the past 50 years, altering its timing and distribution.

BIOCHEMISTRY

Efficient Inhibition of the Alzheimer’s Disease β-Secretase by Membrane Targeting L. Rajendran et al.
Tethering an inhibitor to a membrane anchor renders it effective against a membrane enzyme that creates the amyloid fragments deposited in Alzheimer’s disease, even in vivo.

MEDICINE

Plastin 3 Is a Protective Modifier of Autosomal Recessive Spinal Muscular Atrophy G. E. Oprea et al.
Expression of a protein that promotes axonal growth can compensate for the gene deletion in spinal muscular atrophy, indicating that axonal growth deficiencies cause the disease.

CELL BIOLOGY

Role of C. elegans TAT-1 Protein in Maintaining Plasma Membrane Phosphatidylserine Asymmetry M. Darland-Ransom et al.
A phospholipid translocase enzyme keeps a critical membrane lipid localized to the inner leaflet of the cell membrane so it does not trigger engulfment by immune cells.

VIROLOGY

Vaccinia Virus Uses Macropinocytosis and Apoptotic Mimicry to Enter Host Cells J. Mercer and A. Helenius
To infect host cells, vaccinia virus exposes phosphatidylserine on its surfaces, which signals host cells to recognize the virus as cellular debris and take it up for clearance.

CELL BIOLOGY

Encoding Gender and Individual Information in the Mouse Vomeronal Organ J. He, L. Ma, S. Kim, J. Nakai, C. R. Yu
Mice can recognize the pheromones from individual mice through unique patterns of receptor activation in the vomeronasal organ.

EVOLUTION

Metabolic Diversification—Independent Assembly of Operon-Like Gene Clusters in Different Plants B. Field and A. E. Osbourn
Through strong selection, similar clusters of genes for triterpene biosynthesis have arisen independently through gene duplication and neofunctionalization in several plant lines.

GENETICS

Rare Structural Variants Disrupt Multiple Genes in Neurodevelopmental Pathways in Schizophrenia T. Walsh et al.
Patients with schizophrenia carry multiple small deletions and duplications in their DNA that are associated nonrandomly with neuronal signaling and brain development pathways.

GENETICS

Mechanism of Self-Sterility in a Hermaphroditic Chordate Y. Harada et al.
The sea squirt prevents self-fertilization with two genetic loci, each of which encodes a tightly linked sperm-egg receptor-ligand pair, a system similar to that of flowering plants.
Notch signaling plays a role in bone remodeling by inhibiting the differentiation of osteoblasts and osteoclasts.

The protozoan parasite T. gondii uses a plant-like signaling pathway to exit host cells.

Mutation Makes Good Medicine
Gene variant works like heart-sparing drugs in many African Americans.

Sleep Deprivation for Germs
Study suggests new way to target persistent bacteria.

Gene Studies Tell Placenta’s Tale
Mother-fetus lifeline evolved from a combination of ancient and new genes.
