Whatman is now part of GE Healthcare.

Creating a centre of excellence in separation technology.

The considerable expertise of Whatman in the fields of sample preparation and filtration technologies has earned them an outstanding reputation worldwide. Whatman has key enabling technologies used in the understanding of gene and protein functions. Combining the skills of the two companies will enable GE Healthcare to create strong added value for customers giving unparalleled support to a wide range of research and lab applications.

For more information visit www.gelifesciences.com/whatman
BioProcess International™ 2008 brings you inspiration for the future of a streamlined industry with keynote presentations by visionaries who have climbed the highest mountains, surmounted physical challenges to achieve world endurance records, and supported the launch of NASA shuttles and spacecraft. In addition to the keynotes, the program remains fully grounded in nuts and bolts case studies from biopharmaceutical industry speakers that will help you bring back new tips that can improve your processes tomorrow, while you plan for the coming decade’s changes.

**Keynote Presentations**

**Biosimilars – Follow-on Biologics**
Subsequent Entry Biologics – Biogenerics?

Robert L. Garnick, Ph.D.
Senior Vice President
Regulatory, Quality and Compliance
Genentech, Inc.

Paths to Flexible Regulatory Notification of Large Molecule Life-Cycle Changes

John K. Towns, Ph.D.
Director
Global CMC Regulatory Affairs
Eli Lilly and Co.

**The Challenges and Successes of Creating a Biologics Organization within Pfizer**

Rick Rutter, Ph.D.
Vice President
Pharmaceutical Sciences Biologics
Pfizer Inc.

**Manufacturing Support – Lessons Learned and Trends for the Future**

Konstantin Konstantinov, Ph.D.
Vice President
Technology Development
Genzyme Corp.

**Using Knowledge Management for Technical Collaboration across Generations**

Jeanne Holm, Ph.D.
Chief Knowledge Architect
NASA Jet Propulsion Laboratory

**How to Motivate Staff to Implement Lean Manufacturing to Raise the Bottom Line**

Rob Bryant, MBA
Vice President, Quality, Lean/Six Sigma Program Lead Master Blackbelt
Computer Sciences Corporation

**The Treacherous Path to Success in the Biotech Industry**

Prof. Charles L. Cooney
Robert T. Haslam (1911) Professor, Department of Chemical Engineering, and Faculty Director, Deshpande Center of Technological Innovation, MIT

**Special Exhibit Hall Keynote Presentation**

Maximize Your Savings by Registering Early

Priority Code B8171AD22
ELISAs Weighing You Down? Try Bio-Plex.

The new automated Bio-Plex Pro™ wash stations make Bio-Plex assays a more productive alternative.

In a single well, evaluate up to 50 cytokines, chemokines, or growth factors, and use focused disease-related assay panels to better understand:

- Acute phase response
- Cancer
- Diabetes
- Inflammation
- Signal transduction

Run fewer experiments, use less sample, and increase productivity with Bio-Plex multiplex assays.

For more information, go to www.bio-rad.com/bio-plex/

The Bio-Plex suspension array system includes fluorescently labeled microspheres and instrumentation licensed to Bio-Rad Laboratories, Inc. by the Luminex Corporation.
Are you 100% certain you can see all of the positives on your tissue sections? Human perception changes from one individual to another but what you see is crucial for target identification from drug discovery through to clinical diagnostics. Accurate, objective interpretation of microscope slides, along with extraction of numerical data and permanent, retrievable records is key to advancing and standardizing your research.

Ariol is the automated image analysis system for the quantification of protein biomarkers on slides. Delivering quantified, objective and reproducible data from the identification of disease biomarkers to studying gene copy number at cellular level and for research into predicting disease prognosis.

Manual imaging and analysis is a bottleneck. Ariol removes bottlenecks by providing high speed, automated scanning and image analysis of batches of slides. The end result is high resolution, high quality, automatically captured and analyzed data ready for review.

Capable of both brightfield and fluorescent imaging, Ariol rapidly scans and quantifies IHC, FISH, immunofluorescence, micrometastases, angiogenesis, DNA Ploidy, and tissue microarray slides. FDA cleared for in vitro diagnostic use of HER-2/neu, ER, and PR IHC, PathVysion® and the detection of micrometastases in bone marrow.

For rock solid research data, mine for more information at www.genetix.com/ariolscience

From the publishers of *Science*, *Science Signaling*, formerly known as *Science*'s STKE, will add original research starting September 2008. Each week the journal will publish leading-edge findings in addition to the current features, including Perspectives, Reviews, Protocols, Meeting Reports, Book Reviews, Teaching Resources, and the Database of Cell Signaling.

*Science Signaling* showcases high-impact research in cellular regulation in such fields as molecular biology, development, immunology, neuroscience, microbiology, physiology and medicine, pharmacology, biochemistry, cell biology, bioinformatics, and systems biology. Submit your research that provides new concepts and new understanding of biological signal transduction for consideration.

Subscribing to *Science Signaling* ensures that you and your lab have the latest cell signaling resources. From basic science to design of therapeutics, from molecules to networks and systems design, read the best source – *Science Signaling*.

Submit your paper to: stke.sciencemag.org/about/help/research.dtl
9 gigs and beyond.

Only the SOLiD™ System delivers you the promise of next generation genomics — today. With its unique two-flow cell configuration and unmatched scalability, nine gigabases was just the beginning. Brought to you by the company that automated sequencing and backed by the service and support you have come to depend upon — the SOLID generation delivers.

For SOLID PROOF, visit solid.appliedbiosystems.com
Special Gift Subscription Rate*
Professional $99  Postdoc/Student $50

Give 51 issues of *Science* along with the same yearlong benefits of AAAS membership that you enjoy.

You’ll give colleagues a career boost and students an academic leg-up. You’ll intrigue and enlighten friends; educate and entertain family members. And you’ll add new supporters for the AAAS international, public policy, education, and career programs that advance science and serve society.

Order online—Go to:
promo.aaas.org/giftmay2
or call 1-866-434-AAAS (2227)

*New members only. International orders will receive *Science* Digital edition — to place an order outside the U.S., go to promo.aaas.org/giftmay2

When you give *Science*, you receive our popular AAAS shirt.

IMMUNOHISTOCHEMICAL DETECTION OF GLUTATHIONE

Whole blood cells stained with anti-Glutathione monoclonal antibody, 101-A.

Heart staining with anti-Glutathione monoclonal antibody, 101-A.

**DETECT CYSTEINYLATION OF PROTEINS WITH 102-A MONOCLONAL ANTIBODY!**

Red Blood Cells stained with anti-Cysteine monoclonal antibody, 102-A.

Red Blood Cells stained with anti-Cysteine monoclonal antibody, 102-A plus DTT.

**What’s Next**

Internal adhesive “organ patches” will deliver drugs directly to the heart or liver.

New biodegradable polymer adhesive patches mimic the nanotopography of gecko feet, which adhere well to vertical surfaces. They could seal wounds, replace or augment sutures and staples, and even promote healing by delivering drugs, growth factors or stem cells directly to an internal organ.*

— Jeffrey M. Karp, Ph.D.
Harvard-MIT (HST)
Brigham and Women’s Hospital

ACCELERATE YOUR CAREER. SLOW DOWN YOUR LIFE.

In Ontario, we value a healthy balance between business and pleasure. Here, you can build your career while enjoying a highly satisfying and relaxed lifestyle. Our spirit of innovation and quality of life attracts professionals from around the world, for a wide variety of industries. As a result, we have a diverse, multicultural society that will make you feel right at home. When it comes to recreation and leisure, Ontario’s options are second to none. We have over 250,000 lakes for fishing, canoeing, kayaking and swimming; hundreds of golf courses; ski hills; world-class theatre and more. There’s no better place in the world to work – and play.

Call for Nominations for the AAAS International Scientific Cooperation Award

The AAAS International Scientific Cooperation Award, presented at the AAAS Annual Meeting, February 2009 in Chicago, IL, is given to an individual or small group in the scientific and engineering community that has contributed substantially to the understanding or development of science or engineering across national boundaries. The award is open to all regardless of nationality or citizenship. Nominees must be living at the time of their nomination. The recipient receives US $5000 award, a commemorative plaque, complimentary registration, and reimbursement for reasonable travel and hotel expenses. Please see our website for additional details:

http://www.aaas.org/aboutaaas/awards/int/index.shtml

Nominations should be typed and include the following:

- nominator’s name, address, phone number
- nominee’s name, title, institutional affiliation, address, phone number; two letters of support; curriculum vitae (3 page maximum); a summary statement (250 words) and a longer detailed statement of the actions for which the candidate is nominated; any documentation (books, articles, or other materials) illuminating the significance of the nominee’s achievement may also be submitted

All materials become the property of AAAS.

Completed nominations should be submitted to:
Linda Stroud, AAAS International Office, Room 1113
1200 New York Avenue, NW, Washington, DC 20005, USA,
Fax: (202) 289-4958.

All materials must be received by September 1, 2008.
OPENING ACCESS TO SCIENCE

Introducing OPEN ACCESS Research Journals

- FREE online journals for all to view
- Rapidly published peer-reviewed articles
- Lowest open access fees for authors
- All articles indexed by Google

View details and access journals at:
www.bentham.org/open

Eminent Scientists Endorse Bentham Open

"Bentham’s open access journals offer a creative avenue towards the goal of rapid publication and dissemination of relevant science results."

Richard R. Ernst
Nobel Laureate

"The advantage of the Open Journal series is that it is just that: open and accessible to anyone with a PC at no charge. I appeal to scholars across the disciplines to consider the Open Journal series as a forum for their work."

J.C. Jones
University of Aberdeen, Scotland

AIDS 2008

Cryostat
The Leica CM1950 cryostat is designed to meet the requirements for high-quality sectioning, user safety, and improved workflow. The instrument includes two innovative features: the CryoZone cooling system and the optional vacuum waste removal system. The CryoZone system controls a zone of uniformly cool air in the critical areas of the cryomter. The cool air circulates around the specimen, knife, and antiroll guide to create the best conditions for consistent, high-quality sectioning. The optional vacuum system aids efficient workflow by keeping sections flat and wrinkle-free and enhances user safety by removing waste material. With precise microtome and object feed mechanisms, rapid freezing, and accurate temperature control, the Leica CM1950 provides full control of each tissue section. Optional extras include a dual compressor for independent temperature control of the specimen head and a hesitation-free, motor-driven cutting stroke.

Heat Sealer and Microplate Thawer
The Thermobond 2 is a new generation heat sealer designed to seal polypropylene collection plates, polymerase chain reaction plates, microplates, and deep-well blocks with a specially prepared pierceable film or foil. The Thermobond 2 incorporates an ergonomic design to minimize risk while creating a reproducible, high-integrity seal every time. The Microsteam microplate thawing station circulates ambient air across the base of a frozen microplate or tube rack to gently and evenly thaw samples without risk of damage. It is economical, quiet, and compact.

Perfusion Chamber
The Moist Chamber Type 834/8 is a flexible tool for perfusion of organs such as liver and kidney from rodent models. In its basic configuration, the Moist Chamber consists of a deep (110 mm by 40 mm by 35 mm) organ chamber with a tight-fitting cover. Both components are double-walled and water-jacketed to provide a stable, temperature-controlled environment. The perfusion medium is warmed by passage through a built-in heat exchanger and bubble trap immediately before contact with the organ. Inside the chamber, a flexible silicone platform acts as a rest for preparation and cannulation of the organ. Several measurement and sample ports provide easy access to the inner chamber for collecting a wide range of physiological data. The Moist Chamber can be part of a simple constant flow perfusion system for testing potential vasoactive compounds or form the core of a combined constant pressure and flow system for more complex perfusion and dose-response regimes.

Stem Cell cDNA Libraries
The SuperScript Human Stem Cell cDNA Libraries consist of complementary DNA (cDNA) isolated from commonly used, well-characterized human embryonic carcinoma and human embryonic stem cell lines. These libraries have many uses as a reference set of stem cell genes and can be used for gene discovery, polymerase chain reaction analysis, the construction of cDNA arrays, and functional screening. With these libraries, researchers can begin to characterize key genes in stem cell lines, allowing for the identification of the gene expression profile at various stages of cell development.

Multimode Luminometer
The GlaxMax-Multi Detection System’s multimode capability includes luminescence, fluorescence, and absorbance detection in 96-well plates. The modular design allows a user to expand into these applications as needed, which is particularly applicable for cancer research, cell biology, and drug screening. With a simple touch-screen interface, Glomax operates as an independent workstation with no need for a computer to operate it, but data can be transferred via a USB port. The Glomax is suitable for the multiplexing of assays, and an injection system is available for use with the Dual-Luciferase Reporter Assay System.

Bead-Based Multiplex Assays
The Widescreen EpiTag ERK Pathway Assays are the first wave of bead-based, multiplex assays based on EpiTag Technology licensed from Epitome Biosystems. The new line of assays will enable researchers to make quantitative, highly multiplexed measurements of important cell targets to facilitate drug discovery efforts. The assays detect key events in the extracellular signal-regulated kinases (ERK) pathway from both human and mouse samples. ERK pathway protein levels and phosphorylation are deregulated in many types of cancer and are considered strong candidates for the development of therapeutic approaches. These assays will enable researchers to determine the effect of candidate compounds on multiple analytes to allow a better understanding of on- and off-target effects.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.
Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by Science or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.
With the “Keep Me Posted” alerting feature, SciFinder sends you automatic updates on areas you—and your competitors—are interested in.

You can monitor specific research topics, companies, authors, substances, or sequences, and choose how frequently you receive notifications: daily, monthly, or weekly.

The service isn’t just convenient, it’s incredibly current. Journal article records often appear in SciFinder before they’re even in print. New references, substances, and sequences are added daily. Patents from all the major offices are added within two days of issuance.

As with all SciFinder features, Keep Me Posted is integrated with your workflow. At any point in a search (including the beginning), simply click on the Keep Me Posted button. SciFinder tracks your steps and will generate the appropriate alert—even for complex topics. When you receive a notification, you can follow each reference as you would in a search: find citing or cited articles (with links to the electronic full text), and follow referenced substances and reactions for further information.

Comprehensive, intuitive, seamless—SciFinder doesn’t just alert you, it’s part of the process. To find out more, call us at 800-753-4227 (North America) or 614-447-3700 (worldwide) or visit www.cas.org.
