Look Closer.
Custom-fit RNAi tools for your research

Rarely, one size fits all. Small, medium or large — your research needs are your own. So, our technology comes custom-fit with your basic and applied research in mind.

Sigma’s RNAi tools are tailored to your needs for gene silencing—from single gene analysis and high throughput screens to cutting-edge applications for drug discovery and target validation.

- Guaranteed siRNA, shRNA, miRNA for high performance
- Lentiviral manufacturing to fit your specifications (volume, titer, scale)
- Large scale production for in vivo RNAi and more
- Custom cloned shRNAs for experimental flexibility
- Coming Soon: Zinc Finger Nuclease technology for Targeted Genome Editing

What’s your custom fit?

Design your own lab coat at sigma.com/lookcloser. After all, you know what fits you best.

Enter your design to win.

Grand prize is an all expense paid* three-day, hands-on RNAi Workshop and 20 customized lab coats of your design. Additional prizes for runner-ups.

For a chance to win custom-designed lab coats and to learn from the experts, enter our MISSION® RNAi Lab Coat Design Contest.

For more information and to enter your custom lab coat design, visit sigma.com/lookcloser.
Statistical Analysis is NOT a daunting task anymore - SigmaPlot 11 can show you how!

The Simplest and Most Effective Way to Analyze and Graph Data!
Join the more than 250,000 researchers worldwide who use SigmaPlot to easily customize every graphic detail and create compelling publication-quality graphs that clearly present their results for technical publications, presentations or the web. Gain deeper insight into your data with easy-to-use data analysis tools — from sophisticated curve fitting to advanced mathematical calculations. SigmaPlot 11 has 50 of the most frequently used statistical tests to analyze scientific data right within SigmaPlot’s statistics menu or take advantage of the Advisor Wizard that walks the non-statistician through the analysis of their data.

With SigmaPlot 11 you can:
> Perform over 50 of the most frequently used statistical tests in scientific research with step-by-step guidance that includes suggestion of the most appropriate statistical test, checking for violations of data assumptions and generation of an easy-to-interpret report that has minimal statistical jargon.
> Fit your data easily and accurately to solve simple and advanced curve fitting problems including Global Curve Fitting.
> Choose from over 100 easily customizable 2D and 3D graph types to create publication-quality graphs that communicate exactly what you want. Use pre-formatted worksheets to easily arrange your data according to the required graph type.
> Take advantage of an updated look-and-feel across the entire application and customize your workspace according to your usage.
> Automate repetitive tasks to save your time and effort.

“I find SigmaPlot to be the most user-friendly and advanced... It really is quite exceptional, especially for someone who doesn’t have a huge statistical background.”

Whatman is now part of GE Healthcare.

Creating a centre of excellence in separation technology.

The considerable expertise of Whatman in the fields of sample preparation and filtration technologies has earned them an outstanding reputation worldwide. Whatman has key enabling technologies used in the understanding of gene and protein functions. Combining the skills of the two companies will enable GE Healthcare to create strong added value for customers giving unparalleled support to a wide range of research and lab applications.

For more information visit www.gelifesciences.com/whatman
Sample technologies by QIAGEN

Prepare for results

Rely on QIAGEN sample technologies for:
- DNA, RNA, and protein purification
- Automated sample preparation
- Whole genome and transcriptome amplification
- Epigenetics sample preparation
- Sample collection and stabilization

Contact QIAGEN today or visit www.qiagen.com/goto/SampleTech.
“Cells work quickly and precisely – just like our Leica AM TIRF MC system.”

Our work is concentrated on depicting polarized protein transport in epithelial cells. The incorporation of newly synthesized proteins into the plasma membrane can be tracked in the Leica AM TIRF MC microscope – living up to new insights in life.

Prof. Dr. Ralf Jacob, University Marburg, Department of Clinical Cytobiology and Cytopathology, Marburg, Germany

Living up to Life
How does your Taq polymerase compare?

Get reproducible results, high yield and great sensitivity with GoTaq® DNA Polymerase products. With the new GoTaq® Hot Start Polymerase you can experience the superior amplification and increased specificity of GoTaq with the added convenience of room-temperature setup. Try it today! Take the GoTaq Challenge.

Learn how you can win an Eppendorf Mastercycler® ep!

For details and to get your FREE GoTaq product visit: www.gotaqchallenge.com

Practice of the patented polymerase chain reaction (PCR) process requires a license. The Eppendorf® Thermal Cycler is an Authorized Thermal Cycler and may be used with PCR licenses available from Applied Biosystems. Its use with Authorized Reagents also provides a limited PCR license in accordance with the label rights accompanying such reagents. Promega assumes full responsibility for this promotion and Mastercycler Affiliation, with the permission of Eppendorf North America. Mastercycler® is a registered trademark of Eppendorf AG.
The New Protein Ladder from New England Biolabs

ACHIEVE ACCURACY IN YOUR PROTEIN EXPRESSION ANALYSIS

Choose the new Protein Ladder from New England Biolabs and experience a more consistent banding pattern that is ideal for accurate size determination. A mixture of our recombinant, highly purified proteins, this ladder will resolve into 12 sharp, evenly spaced bands when analyzed by SDS-PAGE. Bring precision to your protein sample analysis with the new Protein Ladder from NEB.

Advantages:
- Suitable for analysis of a wide range of proteins
- Sharp, uniform bands in the range of 10 – 250 kDa
- Convenient band spacing for accurate molecular weight determination
- Easy-to-identify reference bands
- Value pricing

Ordering information:
- Protein Ladder (10 – 250 kDa) .......................................................... P7703S

Other Protein Markers Available from New England Biolabs:
- Protein Marker, Broad Range (2 – 212 kDa) ........................................... P7702S/L
- Prestained Protein Marker, Broad Range (7 – 175 kDa) ...................... P7708V/S/L
- ColorPlus Prestained Protein Marker, Broad Range (7 – 175 kDa) .... P7709V/S/L

Receive a FREE PROTEIN LADDER SAMPLE with the purchase of any product by including P7703G with your order. Limit one sample per order. Valid in the U.S. Only. Offer expires July 31, 2008.

For more information and our international distribution network, please visit www.neb.com

In 2005, the Genome Sequencer 20 System was launched
- Read length: 100 bases
- 20 million bases in less than 5 hours

In 2007, the Genome Sequencer FLX System was launched
- Read length: 250 to 300 bases
- 100 million bases in less than 8 hours

Available in 2008, the Genome Sequencer FLX with improved chemistries
- Read length: >400 bases
- 1 billion bases in less than 24 hours

More applications lead to more publications.
Proven performance with an expanding list of applications and more than 130 peer-reviewed publications.
Visit www.genome-sequencing.com to learn more.
From the publishers of *Science, Science Signaling*, formerly known as *Science’s* STKE, will add original research starting September 2008. Each week the journal will publish leading-edge findings in addition to the current features, including Perspectives, Reviews, Protocols, Meeting Reports, Book Reviews, Teaching Resources, and the Database of Cell Signaling.

*Science Signaling* showcases high-impact research in cellular regulation in such fields as molecular biology, development, immunology, neuroscience, microbiology, physiology and medicine, pharmacology, biochemistry, cell biology, bioinformatics, and systems biology. Submit your research that provides new concepts and new understanding of biological signal transduction for consideration.

Subscribing to *Science Signaling* ensures that you and your lab have the latest cell signaling resources. From basic science to design of therapeutics, from molecules to networks and systems design, read the best source – *Science Signaling*.

Submit your paper to: stke.sciencemag.org/about/help/research.dtl
Unlock the Power of Gene Expression Analysis

The 7900HT Fast Real-Time PCR with TaqMan Arrays are the right combination for high-throughput gene expression analysis.

7900HT Fast Real-Time PCR System
- Gold standard performance from the industry leader
- Interchangeable block formats: 96, 384, TILDA
- Automated sample handling: 24-hour, hands-free operation
- StatMiner™ Software for high-quality data analysis

384-well TaqMan® Arrays
- Proven quality, speed, and ease of use
- Configurable TaqMan® Gene Expression Arrays
- Low sample consumption
- Convenient for disease target classes and pathways
- Increased sensitivity and precision

HRM coming soon

For Research Use Only. Not for use in diagnostic procedures.

Practice of the patented 5' Nuclease Process requires a license from Applied Biosystems. The purchase of the TaqMan® Low Density Array includes an immunity from suit under patents specified in the product insert to use only the amount purchased for the purchaser's own internal research when used with the separate purchase of an Authorized 5' Nuclease Core Kit. No other patent rights are conveyed expressly, by implication, or by estoppel. For further information on purchasing licenses contact the Director of Licensing, Applied Biosystems, 850 Lincoln Centre Drive, Foster City, California 94404, USA. The TaqMan® Low Density Array is covered by U.S. Patents Nos. 6,514,750 and 6,942,837. Microfluidic Card developed in collaboration with 3M Company. The Applied Biosystems 7900HT Fast Real-Time PCR System is a real-time thermal cycler covered by one or more of US Patents Nos. 6,814,934, 5,038,852, 5,333,675, 5,656,493, 5,475,610, 5,602,756, 6,703,236, 6,818,437, 7,008,789, 6,563,581, 6,965,105 and 6,719,949 and corresponding claims in their non-US counterparts, owned by Applera Corporation. No right is conveyed expressly, by implication or by estoppel under any other patent claim, such as claims to apparatus, reagents, kits, or methods such as 5' nuclease methods. Further information on purchasing licenses may be obtained by contacting the Director of Licensing, Applied Biosystems, 850 Lincoln Centre Drive, Foster City, California 94404, USA. ©2008 Applied Biosystems. All rights reserved. Applera, Applied Biosystems and AB (Design) are registered trademarks of Applera Corporation or its subsidiaries in the US and/or certain other countries. TaqMan is a registered trademark of Roche Molecular Systems, Inc. All other trademarks are the sole property of their respective owners.
With the tools and expertise to connect you with top employers, Science Careers is committed to making your job searching experience a success. Whether you’re a cell biologist, geneticist, postdoc, or director, we have the jobs that fit your background. Log on to www.ScienceCareers.org and focus in on your perfect job today.
A poster was included in the May 23 issue of Science mailed to subscribers who work in a selection of fields relevant to viral gene delivery. This special educational poster was created to enhance the understanding of those technologies available to scientists using, or considering using, virally based gene delivery techniques.

If you didn't receive the insert—or you read a communal copy of the journal and someone got to it first—you can sign up at www.stratagene.com/viralposter to obtain your own personal copy of the poster by mail.

The poster is also available as a downloadable PDF on the Science magazine website. Just go to: www.sciencemag.org/products
A BETTER HOME FOR YOUR BUSINESS.
AND YOUR KIDS. With its low operating costs and spirit of innovation, Ontario is ideal for business. But it’s also a natural choice for family life. Our location puts you within reach of 420 million customers and 250,000 lakes. Our universal healthcare will keep employee costs low, and your family’s health high. Our commitment to education means you’ll hire staff from the most highly educated workforce in the world and you can be sure your kids will get high quality schooling. There’s no better place in the world to do business – and make a home.

Bridge the Gap Between Discovery and Clinical Testing
Access the National Cancer Institute’s (NCI) vast resources free of charge to help move therapeutic agents for cancer to the clinic. The National Cancer Institute invites the submission of proposals to:

Rapid Access to Intervention Development
RAID
RAID is not a grant program. Successful applicants instead will receive products or information generated by NCI staff and contractors to aid the applicant’s development of novel therapeutics towards clinical trial. The goal of RAID is the rapid movement of novel molecules and concepts from the laboratory to the clinic for proof-of-principle clinical trials with scientific priority focusing on disproportionate unmet needs such as: • Rare cancers • Pediatric cancer • Clinical/molecular pharmacodynamics • Certain specified classes of biologics • Natural products • Small molecule and antibody development for concomitant imaging studies
RAID will assist investigators by providing any (or all) of the preclinical development steps that may be obstacles to clinical translation. These may include, for example, production, bulk supply, GMP manufacturing, formulation and toxicology.

• The next deadline for receipt of applications is August 1, 2008. Full applications should be submitted electronically (i.e., through use of a secure web-based procedure) with the NCI; the window of opportunity for electronic filing will be open starting July 1, 2008 ending on the receipt date of August 1, 2008 at 5:00 p.m. EST.
• Further information about the RAID Program and electronic filing of applications can be found at: http://dtp.nci.nih.gov
• Inquiries can be made to the RAID Program Coordinator by telephone at 301-496-8720 or by e-mail at RAID@dtpax2.ncifcrf.gov

RAID

Give Knowledge

Special Gift Subscription Rate*
Professional $99  Postdoc/Student $50

Give 51 issues of *Science* along with the same yearlong benefits of AAAS membership that you enjoy.

You’ll give colleagues a career boost and students an academic leg-up. You’ll intrigue and enlighten friends; educate and entertain family members. And you’ll add new supporters for the AAAS international, public policy, education, and career programs that advance science and serve society.

Order online—Go to:

promo.aaas.org/giftmay2
or call 1-866-434-AAAS (2227)

*New members only. International orders will receive *Science* Digital edition — to place an order outside the U.S., go to promo.aaas.org/giftmay2

When you give *Science*, you receive our popular AAAS shirt.
New Products Focus: Gene Expression

PCR Plates
The twin.tec real-time polymerase chain reaction (PCR) plates offer researchers the ability to significantly improve real-time PCR data. The plates feature titanium oxide, which gives the reaction chambers a bright white, opaque color. This material results in up to a 10-fold increase in reflection of fluorescence, providing better data for applications such as low-volume quantitative PCR. White wells also significantly reduce interfering background fluorescence and lead to increased homogeneity of replicates and reproducible results.

Cell-Based Assays
The xCELLigence system provides dynamic, real-time cell-based assays without the use of labels. The assays provide valuable data that traditional end-point analysis can’t, leading to faster assay development and improved attrition rates. The assays offer several throughput options, from 16 to 576 (6 x 96) wells run simultaneously.

Whole Genome Amplification
The BioHelix Rapisome primase-based Whole Genome Amplification (pWGA) system makes use of a primase to synthesize primers onsite, generating multiple initiation sites for random, whole genome amplification. Unlike conventional WGA products, the Rapisome pWGA Kit takes advantage of a natural cellular system to deliver faster, isothermal DNA amplification without the need for heat denaturation and synthetic primers. The kit’s advantages include a one-step process, high efficiency in amplifying circular DNA, and speed—the reaction can be completed in an hour.

Cells for Cloning
The Clean Genome E. coli and competent cells are suitable for most cloning applications. They offer superior genomic stability because of the removal of all mobile insertion-sequence elements. The Clean Genome E. coli is the only insertion-sequence–free E. coli strain available. The absence of mobile elements eliminates the danger of undesirable insertion-sequence transposition into your clone and reduces the mutation rate of the strain itself. The competent cells increase success in cloning difficult or “unclonable” genes by eliminating cloning artifacts due to insertion-sequence transposition and minimizing plasmid rearrangement.

Angiogenesis Assays
The most established tests used to analyze new blood vessel formation in vitro are the “tube formation” and the “sprouting” assays. In both, the formation of new blood vessels is simulated on a gel matrix. The µ-Slide Angiogenesis is a new carrier for angiogenesis assays with a “well-in-a-well” structure that drastically reduces the amount of matrix material needed and solves the classic meniscus problems. The miniaturized system of the inner well requires only 10-μl of matrix. The unique geometry of the slide places the cells that need to be imaged in the same focal plane, which strongly improves the imaging quality of the assays.

Virus Purification Kits
New Fast-Trap Virus Purification and Concentration Kits include one for adenovirus purification and one for lentivirus purification. Purifying viruses after propagation in host cells is a critical step toward using the viruses as vectors for genetic modification of target cells. The kit contains all the components to accommodate the entire virus purification workflow. The Fast-Trap kits provide more reliable, faster results than traditional methods because they incorporate Millipore’s Steriflip filter unit, an easy-to-use format featuring a new anion exchange membrane that binds and elutes viruses. The vacuum-based, closed-system purification kits are quick, easy, and safe to operate with a turnaround time of less than two hours, compared with two days with traditional purification techniques.

Portable Gel Documentation System
The CSL MicroDoc is an ultracompact, portable gel documentation system that incorporates an eight-inch screen and a 1-GB flash card. The system produces high-quality images because of its integral 16-bit charge-coupled-device camera, which provides resolution to 8.0 megapixels. The system can be used either completely independent of a computer or connected to and controlled by a computer via a USB connection. Images can be captured from agarose or other fluorescent gels, colorimetric gels, autoradiography film, and blotting membranes. The system includes a 55-mm ethidium bromide filter with a built-in safety switch so the ultraviolet transilluminator is turned off when the door is open. Files can be saved in a variety of formats.

Research Corporation, a foundation for the advancement of science, is proud to announce the 2008 Cottrell Scholar Awards. The Cottrell Scholar Award, $100,000 in discretionary funds, is designed to identify early-career faculty who show promise to be future leaders in research, and who are committed to making significant contributions to teaching, especially at the undergraduate level.

For more information, see www.rescorp.org

“There is no doubt in my mind that receiving the Cottrell Scholar Award as a young faculty member critically contributed to further development of my research and my group, and enabled me to pursue a novel project that led to dramatic improvements in our ability to explore the vast parameters of population synthesis models.”

How can you protect yourself, the environment, and your DNA sample?

Answer: SYBR® Safe. Fact is, it’s just as effective as ethidium bromide, yet it’s not a hazardous agent. So it’s not only better for the environment, but better for you. And since SYBR® Safe uses blue light for visualization, your DNA sample won’t be damaged by UV, so you’ll get better cloning efficiencies. Next time you’re staining DNA, be sure to make the safer choice for yourself and the environment. Get SYBR® Safe. www.invitrogen.com/sybrsafe
