 COVER
An artist’s conception of the antibiotic penicillin and some of the bacteria that have developed resistance to various antibiotics. A special section beginning on page 355 explores the rise and spread of so-called bad bugs and possible interventions.

Plant Immunity Requires Conformational Changes of NPR1 via S-Nitrosylation and Thioredoxins
Y. Tada et al.
After a pathogen invades a plant, a protein, usually kept in a multimeric state by S-nitrosylation, is dissociated by thioredoxin, freeing the monomers for defense responses.

Ferruginous Conditions Dominated Later Neoproterozoic Deep-Water Chemistry
D. E. Canfield et al.
Low sulfur input caused the deeper ocean to become anoxic and rich in ferrous iron 750 million years ago, a reversal from the more oxidizing conditions of the previous 1 billion years.

TECHNICAL COMMENT ABSTRACTS
MICROBIOLOGY
Comment on "A 3-Hydroxypropionate/4-Hydroxybutyrate Autotrophic Carbon Dioxide Assimilation Pathway in Archaea"
T. J. G. Ettema and S. G. E. Andersson
full text at www.sciencemag.org/cgi/content/full/321/5887/342b

Response to Comment on "A 3-Hydroxypropionate/4-Hydroxybutyrate Autotrophic Carbon Dioxide Assimilation Pathway in Archaea"
I. A. Berg, D. Kockelkorn, W. Buckel, G. Fuchs
full text at www.sciencemag.org/cgi/content/full/321/5887/342c

Ice Scour Disturbance in Antarctic Waters
D. A. Smale et al.
Icebergs have increasingly scoured the coastlines along the West Antarctic Peninsula as its ice shelves and glaciers have waned, affecting benthic marine communities.

Identification of SLEEPLESS, a Sleep-Promoting Factor
K. Koh et al.
A search for genetic modulators of sleep in Drosophila identified a gene encoding a brain protein that is likely secreted and is required for recovery from sleep deprivation. >> News story p. 334

Properties of Gamma-Ray Burst Progenitor Stars
P. Kumar, R. Narayan, J. L. Johnson
Analysis of the x-ray afterglow of intense gamma-ray bursts shows that the bursts result from consumption of the outer part of a dense star and define the star’s rotation rate.
APPLIED PHYSICS
High-Resolution Scanning X-ray Diffraction Microscopy 379
P. Thibault et al.
Analysis of differences in diffraction patterns at each point along an x-ray scan of a material allows imaging of a buried structure with a resolution of 50 nanometers. >> Perspective p. 352

MATERIALS SCIENCE
Observations of Intergranular Stress Corrosion 382
Cracking in a Grain-Mapped Polycrystal
A. King et al.
Tomographic imaging reveals that some grain boundaries in stainless steel are resistant to stress corrosion cracking, which leads to sudden brittle failure. >> Perspective p. 349

MATERIALS SCIENCE
Measurement of the Elastic Properties and Intrinsic Strength of Monolayer Graphene 385
C. Lee, X. Wei, J. W. Kysar, J. Hone
Measurements of the elastic properties of graphene agree with calculations for a defect-free material and show that it is indeed stronger than other materials.

CHEMISTRY
Measurement of the Distribution of Site Enhancements in Surface-Enhanced Raman Scattering 388
Y. Fang, N.-H. Seong, D. D. Dlott
The distribution of electric field–enhancing sites on a nanostructured substrate is measured by using the enhanced field to damage those sites.

CLIMATE CHANGE
Patagonian Glacier Response During the Late Glacial–Holocene Transition 392
R. P. Ackert Jr. et al.
Dating of a glacial moraine in southern Patagonia implies that increased precipitation caused glacier growth after a period of Northern Hemisphere cooling 11,000 years ago. >> Perspective p. 348

SOCIOLOGY
Electronic Publication and the Narrowing of Science and Scholarship 395
J. A. Evans
As journals become available electronically, scientists and scholars have more articles at their fingertips but cite relatively fewer, and these tend to be more recent. >> News story p. 329

EVOLUTION
The Evolution and Distribution of Species Body Size 399
A. Clauset and D. H. Erwin
A model of evolutionary body-size changes that accounts for physical constraints and extinction risk reproduces the size distribution of land mammals from the Quaternary.

CELL BIOLOGY
Four-jointed Is A Golgi Kinase That Phosphorylates a Subset of Cadherin Domains 401
H. O. Ishikawa et al.
A newly described type of protein kinase found in the Golgi phosphorylates signaling proteins on amino acids that are destined to be within extracellular domains.

CELL SIGNALING
Signal-Mediated Dynamic Retention of Glycosyltransferases in the Golgi 404
L. Tu, W. C. S. Tai, L. Chen, D. K. Banfield
Glycosyltransferase enzymes stay in the Golgi in the face of continuing membrane traffic because a receptor links their cytoplasmic tails to a recycling coated vesicle.

IMMUNOLOGY
Anomalous Type 17 Response to Viral Infection by CD8+ T Cells Lacking T-bet and Eomesodermin 408
A. M. Intlekofer et al.
Two transcription factors cooperate to ensure the correct functioning of CD8+ T cells during the response to infection.

CELL SIGNALING
Riboswitches in Eubacteria Sense the Second Messenger Cyclic Di-GMP 411
N. Sudarsan et al.
The bacterial second messenger cyclic di-guanosine monophosphate controls a wide variety of cellular functions by acting on a riboswitch motif in numerous messenger RNAs.

NEUROSCIENCE
Bottom-Up Dependent Gating of Frontal Signals in Early Visual Cortex 414
L. B. Ekstrom et al.
Higher brain centers can modulate activity in the cortical regions that directly receive visual input, but only when a visual stimulus is present.

NEUROSCIENCE
Evolutionary Origins for Social Vocalization in a Vertebrate Hindbrain–Spinal Compartment 417
A. H. Bass, E. H. Gilland, R. Baker
The conserved neural circuitry for vocal communication in fish and other tetrapods suggests that this function may have originated prior to the evolution of bony vertebrates. >> Perspective p. 347

NEUROSCIENCE
Orbitofrontal Dysfunction in Patients with Obsessive–Compulsive Disorder and Their Unaffected Relatives 421
S. R. Chamberlain et al.
The abnormally low activation in the frontal cortex of individuals with obsessive compulsive disorder and their close relatives may confer a risk for the disease.
A new drug discovery paradigm focuses on identifying and targeting cellular elements of the host that are exploited by pathogens.

**GLOSSARY**
Find out what DILP, HRE, and OGT mean in the world of cell signaling.

**EVENTS**
Check out the more than 50 cell signaling–related meetings happening in the second half of 2008.
