Plant Immunity Requires Conformational Changes of NPR1 via S-Nitrosylation and Thioredoxins

Y. Tada et al.

After a pathogen invades a plant, a protein, usually kept in a multimeric state by S-nitrosylation, is dissociated by thioredoxin, freeing the monomers for defense responses.

10.1126/science.1156970

Ferruginous Conditions Dominated Later Neoproterozoic Deep-Water Chemistry

D. E. Canfield et al.

Low sulfur input caused the deeper ocean to become anoxic and rich in ferrous iron 750 million years ago, a reversal from the more oxidizing conditions of the previous 1 billion years.

10.1126/science.1154499

Essential Cytoplasmic Translocation of a Cytokine Receptor–Assembled Signaling Complex

A. Matsuzawa et al.

Degradation of one member of a protein complex that forms when a cytokine receptor is activated causes the complex to move to the cytoplasm, triggering the downstream pathway.

10.1126/science.1157340

A search for genetic modulators of sleep in Drosophila identified a gene encoding a brain protein that is likely secreted and is required for recovery from sleep deprivation.

>> News story p. 334

Icebergs have increasingly scoured the coastlines along the West Antarctic Peninsula as its ice shelves and glaciers have waned, affecting benthic marine communities.

>> Report p. 392

A search for genetic modulators of sleep in Drosophila identified a gene encoding a brain protein that is likely secreted and is required for recovery from sleep deprivation.

>> News story p. 334

Analysis of the x-ray afterglow of intense gamma-ray bursts shows that the bursts result from consumption of the outer part of a dense star and define the star's rotation rate.
APPLIED PHYSICS
High-Resolution Scanning X-ray Diffraction Microscopy
P. Thibault et al.
Analysis of differences in diffraction patterns at each point along an x-ray scan of a material allows imaging of a buried structure with a resolution of 50 nanometers. >> Perspective p. 352

MATERIALS SCIENCE
Observations of Intergranular Stress Corrosion Cracking in a Grain-Mapped Polycrystal
A. King et al.
Tomographic imaging reveals that some grain boundaries in stainless steel are resistant to stress corrosion cracking, which leads to sudden brittle failure. >> Perspective p. 349

MATERIALS SCIENCE
Measurement of the Elastic Properties and Intrinsic Strength of Monolayer Graphene
C. Lee, X. Wei, J. W. Kysar, J. Hone
Measurements of the elastic properties of graphene agree with calculations for a defect-free material and show that it is indeed stronger than other materials.

CHEMISTRY
Measurement of the Distribution of Site Enhancements in Surface-Enhanced Raman Scattering
Y. Fang, N.-H. Seong, D. D. Dlott
The distribution of electric field–enhancing sites on a nanostructured substrate is measured by using the enhanced field to damage those sites.

CLIMATE CHANGE
Patagonian Glacier Response During the Late Glacial–Holocene Transition
R. P. Ackert Jr. et al.
Dating of a glacial moraine in southern Patagonia implies that increased precipitation caused glacier growth after a period of Northern Hemisphere cooling 11,000 years ago. >> Perspective p. 348

SOCIETY
Electronic Publication and the Narrowing of Science and Scholarship
J. A. Evans
As journals become available electronically, scientists and scholars have more articles at their fingertips but cite relatively fewer, and these tend to be more recent. >> News story p. 329

EVOLUTION
The Evolution and Distribution of Species Body Size
A. Clauset and D. H. Erwin
A model of evolutionary body-size changes that accounts for physical constraints and extinction risk reproduces the size distribution of land mammals from the Quaternary.

CELL BIOLOGY
Four-jointed Is a Golgi Kinase That Phosphorylates a Subset of Cadherin Domains
H. O. Ishikawa et al.
A newly described type of protein kinase found in the Golgi phosphorylates signaling proteins on amino acids that are destined to be within extracellular domains.

CELL BIOLOGY
Signal-Mediated Dynamic Retention of Glycosyltransferases in the Golgi
L. Tu, W. C. S. Tai, L. Chen, D. K. Banfield
Glycosyltransferase enzymes stay in the Golgi in the face of continuing membrane traffic because a receptor links their cytoplasmic tails to a recycling coated vesicle.

IMMUNOLOGY
Anomalous Type 17 Response to Viral Infection by CD8+ T Cells Lacking T-bet and Eomesodermin
A. M. Intlekofer et al.
Two transcription factors cooperate to ensure the correct functioning of CD8+ T cells during the response to infection.

CELL SIGNALING
Riboswitches in Eubacteria Sense the Second Messenger Cyclic Di-GMP
N. Sudarsan et al.
The bacterial second messenger cyclic di-guanosine monophosphate controls a wide variety of cellular functions by acting on a riboswitch motif in numerous messenger RNAs.

NEUROSCIENCE
Bottom-Up Dependent Gating of Frontal Signals in Early Visual Cortex
L. B. Ekstrom et al.
Higher brain centers can modulate activity in the cortical regions that directly receive visual input, but only when a visual stimulus is present.

NEUROSCIENCE
Evolutionary Origins for Social Vocalization in a Vertebrate Hindbrain–Spinal Compartment
A. H. Bass, E. H. Gilland, R. Baker
The conserved neural circuitry for vocal communication in fish and other tetrapods suggests that this function may have originated prior to the evolution of bony vertebrates. >> Perspective p. 347

NEUROSCIENCE
Orbitofrontal Dysfunction in Patients with Obsessive-Compulsive Disorder and Their Unaffected Relatives
S. R. Chamberlain et al.
The abnormally low activation in the frontal cortex of individuals with obsessive compulsive disorder and their close relatives may confer a risk for the disease.
Tough Times for the Taz
Researchers debate the evolutionary impact of a deadly cancer in Tasmanian devils.

Answer to Carbon Emissions May Lie Under the Sea
Researchers propose injecting greenhouse gas near volcanic rock on the ocean bottom.

“Baby Boom” in a Stellar Nursery
Astronomers discover an ancient galactic star factory on overdrive.

REVIEW: Host-Directed Drug Targeting of Factors Hijacked by Pathogens
A new drug discovery paradigm focuses on identifying and targeting cellular elements of the host that are exploited by pathogens.

GLOSSARY
Find out what DILP, HRE, and OGT mean in the world of cell signaling.

EVENTS
Check out the more than 50 cell signaling–related meetings happening in the second half of 2008.

Do You Wanna Be a VAP?
L. Malisheski
A visiting assistant professor position can be a step forward on some career paths.

Tooling Up: Review Your Career
D. Jensen
It may be time to shake things up with a career review.

Designing for the Next Quake
A. Saini
Earthquake engineers study how to avoid seismic destruction.

Science Careers Seeks Bloggers
J. Austin
We are looking for a few people with interesting things to say about their careers in science.
