COVER
Ordovician sedimentary rocks at Presqu’île de Crozon, Brittany, France. These rocks show high-frequency cycles of less than 500,000 years between bay and open marine conditions. This and similar records allow reconstruction of global sea level from 550 to 250 million years ago. The pink boulder at the bottom is about 15 centimeters across. See page 64.

ECOLOGY

Natal Homing and Connectivity in Atlantic Bluefin Tuna Populations
J. R. Rooker et al.
Isotopes in the ear bones of tuna reveal that two populations—from the Gulf of Mexico and the Mediterranean—mingle in the Atlantic as adolescents but return home to breed. >> Science Podcast

CHEMISTRY

Molecular Confinement Accelerates Deformation of Entangled Polymers During Squeeze Flow
H. D. Rowland, W. P. King, J. B. Pethica, G. L. W. Cross
When polymers are squeezed at nanometer scales, the longest chains unexpectedly flow more easily, even though in theory they should be the most entangled.

CELL BIOLOGY

Ubiquitin-Like Protein Involved in the Proteasome Pathway of Mycobacterium tuberculosis
A prokaryotic version of ubiquitin, a eukaryotic tag for protein degradation, is linked to lysines in prokaryotic proteins destined for destruction, a process called pupylation.

ASTROPHYSICS

A Large Excess in Apparent Solar Oblateness Due to Surface Magnetism
M. D. Fivian, H. S. Hudson, R. P. Lin, H. J. Zahid
Satellite measurements indicate that the sun is more oblate than previous measurements suggested, a shape resulting from the combined effects of rotation and magnetism.

BIOCHEMISTRY

The 2.6 Angstrom Crystal Structure of a Human A2A Adenosine Receptor Bound to an Antagonist
V.-P. Jaakola et al.
The ligand binding pocket of the caffeine-binding human adenosine receptor has a different position and orientation than that of other G protein–linked receptors.

BREVIA

ECOLOGY

Bacterial Protection of Beetle-Fungus Mutualism
J. J. Scott et al.
The southern pine beetle uses a polyene peroxide antifungal agent secreted by a bacterium to protect its fungal food source from attack by another fungal species. >> Perspective p. 52

RESEARCH ARTICLE

GEOLOGY

A Chronology of Paleozoic Sea-Level Changes
B. U. Haq and S. R. Schutter
The marine sedimentary rock record shows that sea level rose from the Early Cambrian to the Ordovician and then fluctuated through the Permian, partly in response to glaciations.

PHYSICS

Ultrafast X-ray Thomson Scattering of Shock-Compressed Matter
A. L. Kritcher et al.
A transient x-ray source reveals rapid structural changes in LiH as a high-powered laser produces extreme compression and heating, inducing an insulator-to-metal transition.

APPLIED PHYSICS

Time Reversal and Negative Refraction
J. B. Pendry
Optically active materials with nonlinear optical properties are predicted to mimic negatively refractive materials but without losses associated with true negative refraction.

CHEMISTRY

Surface-Modified Carbon Nanotubes Catalyze Oxidative Dehydrogenation of n-Butane
J. Zhang, X. Liu, R. Blume, A. Zhang, R. Schlögl, D. S. Su
Carbon nanotubes decorated with phosphate groups can catalyze the partial oxidation of alkanes, a process that has normally required complex metal oxides.

CHEMISTRY
Merging Photoredox Catalysis with Organocatalysis: The Direct Asymmetric Alkylation of Aldehydes
D. A. Nicewicz and D. W. C. MacMillan
When irradiated by light, a ruthenium-organic catalyst creates intermediates with unpaired electrons that undergo otherwise intractable asymmetric reactions. >> Perspective p. 55

CHEMISTRY
Temperature-Induced Hydrophobic-Hydrophilic Transition Observed by Water Adsorption
H.-J. Wang, X.-K. Xi, A. Kleinhammes, Y. Wu
The insides of single-walled carbon nanotubes repel water at 22°C but absorb it at 8°C, showing that temperature finely controls the dynamics of confined water nanodroplets.

CLIMATE CHANGE
Atmospheric CO2 and Climate on Millennial Time Scales During the Last Glacial Period
J. Ahn and E. J. Brook
A detailed gas record from the Byrd ice core from 90,000 to 20,000 years ago shows that warming episodes tracked high CO2 levels in Antarctica but lagged by several thousands of years in Greenland.

EVOLUTION
Rates of Molecular Evolution Are Linked to Life History in Flowering Plants
S. A. Smith and M. J. Donoghue
A phylogenetic analysis shows that long-lived trees and shrubs have lower rates of molecular evolution than short-lived herbaceous plants.

DEVELOPMENTAL BIOLOGY
Chemokine Signaling Controls Endodermal Migration During Zebrafish Gastrulation
S. Nair and T. F. Schilling
During zebrafish gastrulation, chemokines are required for integrin-dependent adhesion of endodermal cells to mesoderm, a role distinct from their action as chemoattractants.

STRUCTURAL BIOLOGY
Molecular Architecture of the "Stressosome," a Signal Integration and Transduction Hub
J. Marles-Wright et al.
The stressosome, a huge multiprotein complex, has a virus capsid–like core and variable extensions that detect and integrate signals to activate the stress response.

NEUROSCIENCE
Internally Generated Reactivation of Single Neurons in Human Hippocampus During Free Recall
H. Gelbard-Sagiv et al.
The firing patterns of brain neurons recorded from people watching a video episode were the same as those recorded during later recall of the same show.

PLANT SCIENCE
A Physical Map of the 1-Gigabase Bread Wheat Chromosome 3B
E. Paux et al.
A physical map of the largest chromosome of wheat provides the first step toward sequencing the huge, 17-billion base pair genome of this critical food crop.

CELL BIOLOGY
High-Quality Binary Protein Interaction Map of the Yeast Interactome Network
H. Yu et al.
Comparison of existing methods for mapping protein-protein interactions in yeast cells shows that the high-throughput approaches are complementary to one another. >> Perspective p. 56

CELL BIOLOGY
Ceramide Biogenesis Is Required for Radiation-Induced Apoptosis in the Germ Line of C. elegans
X. Deng et al.
In worms, lipid signaling at the mitochondria is necessary for the germ cell death that follows radiation damage, but not for normal developmental cell death.

PSYCHOLOGY
Lacking Control Increases Illusory Pattern Perception
J. A. Whitson and A. D. Galinsky
When subjects receive false feedback in lab tests and so feel a loss of control, they are more apt to perceive patterns in random visual static and imagine conspiracies. >> Science Podcast

SCIENCE SIGNALING
www.sciencesignaling.org
THE SIGNAL TRANSDUCTION KNOWLEDGE ENVIRONMENT

RESEARCH ARTICLE: Purinergic Control of T Cell Activation by ATP Released Through Pannexin-1 Hemichannels
Pannexin hemichannel-mediated release of ATP provides an autocrine, costimulatory signal for T cell activation.

RESEARCH ARTICLE: Kinome siRNA Screen Identifies Regulators of Ciliogenesis and Hedgehog Signal Transduction
M. Evangelista, T. Y. Lim, J. Lee, L. Parker, A. Ashique, A. S. Peterson, W. Ye, D. P. Davis, F. J. de Sauvage
Cdc2l1 is a component of the Hh signaling pathway and opposes the activity of the negative regulator Sufu.

PERSPECTIVE: A Wnt-fall for Gene Regulation—Repression
N. P. Hoverter and M. L. Waterman
Recognition of a nonclassical Wnt-response element by the transcription factor TCF results in β-catenin acting as a transcriptional repressor of certain Wnt target genes.

PRESENTATION: Somatic Cell Genetics for the Study of NF-κB Signaling in Innate Immunity
R. Krumbach, S. Bloo, G. Rykhof, F. Randow
A forward genetic screen in immortalized cells identifies NF-κB signaling components required to transduce signals from Toll-like receptors.
