COVER
Steep terrain: To move a therapy from the research lab to the doctor’s office requires a huge investment in clinical trials, which are growing more costly and more complex every year. See the special section beginning on page 209.

Impacts Research Seen as Next Climate Frontier
From Remarkable Rescue to Restoration of Lost Habitat
Samurai Mathematician Set Japan Ablaze With Brief, Bright Light
Students Learn How, Not What, to Think About Difficult Issues
CHEMISTRY
Reaction-Driven Restructuring of Rh-Pd and Pt-Pd Core-Shell Nanoparticles
F. Tao et al.
Reducing or oxidizing conditions segregates rhenium or palladium at the surface of Rh-Pd (but not Pt-Pd) nanoparticles, facilitating the tuning of their catalytic properties.

BREVIA
PALEONTOLOGY
Collective Behavior in an Early Cambrian Arthropod
X.-G. Hou, D. J. Siveter, R. J. Aldridge, D. J. Siveter
Fossil arthropods in 525-million-year-old rocks in China are preserved in a long chain, implying that some Cambrian animals exhibited social behavior, unlike later arthropods.

ECOLOGY
The Status of the World’s Land and Marine Mammals: Diversity, Threat, and Knowledge
J. Schipper et al.
A comprehensive assessment of all of Earth’s mammals shows that primary productivity drives species richness on land and sea and that 20 to 25 percent of species are under threat. >> News story p. 178

PHYSICS
A High Phase-Space-Density Gas of Polar Molecules
K.-K. Ni et al.
Raman laser irradiation can cool a cloud of KRb molecules to ultralow translational, vibrational, and rotational temperatures, a step toward forming molecular condensates. >> Perspective p. 203

REPORTS
APPLIED PHYSICS
Cavity Optomechanics with a Bose-Einstein Condensate
F. Brennecke, S. Ritter, T. Donner, T. Esslinger
Coupling a Bose-Einstein condensate to an optical cavity holding a few trapped photons provides a sensitive probe of mechanical oscillations in the quantum regime.
REPORTS CONTINUED...

MATERIALS SCIENCE
Carbon Nanotube Arrays with Strong Shear Binding-On and Easy Normal Lifting-Off
L. Qu, L. Dai, M. Stone, Z. Xia, Z. L. Wang
Like gecko feet, a disordered array of carbon nanotubes with curly entangled tops can grip vertical surfaces without slipping but can also release and reattach easily.

CHEMISTRY
Base Sequence and Higher-Order Structure Induce the Complex Excited-State Dynamics in DNA
N. K. Schwalb and F. Temps
DNA dissipates ultraviolet light more effectively when it consists of a mixed sequence than when it is an extended run of the same nucleotide.

GEOPHYSICS
Implications of Magma Transfer Between Multiple Reservoirs on Eruption Cycling
D. Elsworth, G. Mattioli, J. Taron, B. Voight, R. Herd
Data from the Soufrière Hills volcano reveal how connected shallow and deep magma chambers led to three eruption cycles over 12 years and imply that activity may end soon.

EVOLUTION
Natural Selection on a Major Armor Gene in Three-spine Stickleback
R. D. H. Barrett, S. M. Rogers, D. Schluter
In stickleback fish transferred to fresh water, selection against the allele for the costly armor plating only partly explains the changes in allele frequencies over generations.

ECOLOGY
Global Warming, Elevational Range Shifts, and Lowland Biotic Attrition in the Wet Tropics
R. K. Colwell et al.
Global warming threatens to cause species loss in the lowland tropics, as species that move upward from low elevations are not replaced and those on mountain tops die out.

ECOLOGY
Impact of a Century of Climate Change on Small-Mammal Communities in Yosemite National Park, USA
C. Moritz et al.
Over the past 100 years, small mammals in Yosemite, California, show range contraction at high elevations and range expansion lower down, as well as rearranged communities.

BIOCHEMISTRY
Small Molecule–Induced Allosteric Activation of the Vibrio cholerae RTX Cysteine Protease Domain
P. J. Lupardus, A. Shen, M. Bogoy, K. C. Garcia
Cholera toxin becomes active inside an infected cell when a host lipid binds to it, allosterically exposing its active site, which allows autoproteolysis and thus infection.

IMMUNOLOGY
Noncytotoxic Lytic Granule-Mediated CD8+ T Cell Inhibition of HSV-1 Reactivation from Neuronal Latency
J. E. Knickelbein et al.
Herpes virus in neurons can be kept in a latent state by T cells, which release granzyme B, an inhibitor of a protein necessary for viral gene expression.

CLIMATE CHANGE
Northern Hemisphere Controls on Tropical Southeast African Climate During the Past 60,000 Years
J. E. Tierney et al.
Abrupt changes in precipitation and temperature resolved in a record spanning the past 60,000 years from Lake Tanganyika, East Africa, are coeval with Northern Hemisphere climate events.

ECOLOGY
Global Warming, Elevational Range Shifts, and Lowland Biotic Attrition in the Wet Tropics
R. K. Colwell et al.
Global warming threatens to cause species loss in the lowland tropics, as species that move upward from low elevations are not replaced and those on mountain tops die out.

**SCIENCE SIGNALING**
www.sciencesignaling.org
THE SIGNAL TRANSDUCTION KNOWLEDGE ENVIRONMENT

PODCAST
N. R. Gough and J. F. Foley
The bacteria that cause periodontitis evade destruction by promoting crosstalk between two receptors that regulate the immune response.

PRESENTATION: The Endothelial Glycocalyx—A Mechano-Sensor and -Transducer
J. M. Tarbell and E. E. Ebong
A complex extracellular network of proteoglycans communicates mechanical stress to endothelial cells.

ST NETWATCH: Cellerator
This plug in for Mathematica allows users to model interactions between components of a signal transduction network or between multiple networks; in Modeling Tools.

ST NETWATCH: Clapham Lab
Find a wealth of information about TRP channels and calcium signaling from this lab at Harvard Medical School; in Labs and People.

ST NETWATCH: GenMAPP
Make sense of array data by using this application to map gene expression data onto cellular pathways; in Bioinformatics Resources.

Planning your research.
