EDITORIAL

649  Science and China’s Modernization
    by Wen Jiabao

BOOKS ET AL.

Political Science

Red State, Blue State, Rich State, Poor State
676  Why Americans Vote the Way They Do
    A. Gelman et al., reviewed by T. N. Clark and C. Graziul

Electronic Elections
677  The Perils and Promises of Digital Democracy

BROWSINGS
678  The Hidden Costs of Clean Election Reform
    F. C. Schaffer, reviewed by M. Johnston

The Persuadable Voter
679  Wedge Issues in Presidential Campaigns
    D. S. Hillygus and T. G. Shields, reviewed by D. A. M. Peterson

Mathematics and Democracy
680  Designing Better Voting and Fair-Division Procedures
    S. J. Brams, reviewed by I. McLean

Unequal Democracy
681  The Political Economy of the New Gilded Age
    L. M. Bartels, reviewed by R. Grafstein

EDUCATION FORUM

PhET: Simulations That Enhance Learning
682  C. E. Wieman, W. K. Adams, K. K. Perkins

Genomics Education Partnership
684  D. Lopatto et al.

PERSPECTIVES

Assessing Ground Shaking
686  D. R. H. O’Connell
    >> Report p. 727

Whither Hurricane Activity?
687  G. A. Vecchi et al.

Nanoscale Polymer Processing
689  C. L. Soles and Y. Ding
    >> Report p. 720

Physiology and Climate Change
690  H. O. Pörtner and A. P. Farrell

NEWS OF THE WEEK

Scientists Plant Grass-Roots Effort for Obama in Final Days of Contest
658
Eat, Drink, and Be Wary: A Sugar’s Sour Side

CORRECTIONS AND CLARIFICATIONS

677
CHEMISTRY
Time-Resolved Dynamics in N\textsubscript{2}O\textsubscript{4} Probed Using High Harmonic Generation
W. Li et al.
Electrons can be ejected from multiple orbitals of N\textsubscript{2}O\textsubscript{4} by exploiting different stages in its excited vibrations, yielding an attosecond light probe of molecular dynamics.
10.1126/science.1163077

BIOCHEMISTRY
Structural Evidence for Common Ancestry of the Nuclear Pore Complex and Vesicle Coats
S. G. Brohawn et al.
The protein complex that controls entry and exit from the cell nucleus shares a structural element with vesicle coat proteins, suggesting that it is built around a lattice-like scaffold.
10.1126/science.1165886

LETTER: European Union and NIH Collaborate
E. A. Zerhouni and J. Potočnik
10.1126/science.1167667

PERSPECTIVES
Aneuploidy Advantages?
E. Hernando
692
A New Glance at Glia
A. Reichenbach and T. Pannicke
693
Retrospective: George E. Palade (1912–2008)
R. W. Schekman
695

TECHNICAL COMMENT ABSTRACTS
PHYSIOLOGY
Comment on “Differential Rescue of Light- and Food-Entrainable Circadian Rhythms”
R. E. Mistlberger et al.
675
Response to Comment on “Differential Rescue of Light- and Food-Entrainable Circadian Rhythms”
P. M. Fuller, J. Lu, C. B. Saper
675

RESEARCH ARTICLES
CELL BIOLOGY
Aneuploidy Affects Proliferation and Spontaneous Immortalization in Mammalian Cells
B. R. Williams et al.
703
Mouse cell lines carrying extra copies of one of four chromosomes all show less cell proliferation and higher gene expression, but vary in how fast they become cancer-like cells.

BIOCHEMISTRY
Structure and Molecular Mechanism of a Nucleobase–Cation–Symport-1 Family Transporter
S. Weyand et al.
709
The structure of a membrane transporter in an open state suggests that in- and out-facing cavities reciprocally open and close coordinated by two transmembrane segments.

PHYSICS
The Role of Impulse on the Initiation of Particle Movement Under Turbulent Flow Conditions
P. Diplas et al.
717
Entrainment of sediment grains from, say, a stream bed, by turbulent flow depends not just on the magnitude of the applied fluid forces but also on their duration.

MICROBIOLOGY
Bat White-Nose Syndrome: An Emerging Fungal Pathogen?
D. S. Blehert et al.
713
Bats that died en masse in New York state while they were hibernating were infected with a cold-tolerant fungus.

PHYSICAL REVIEW
Magneticon on the Angrite Parent Body and the Early Differentiation of Planetesimals
B. P. Weiss et al.
720
A type of primitive meteorite from the earliest small bodies in the solar system preserves remnant magnetism, implying that these planetesimals had a convecting metallic core.

MATERIALS SCIENCE
Molecular Confinement Accelerates Deformation of Entangled Polymers During Squeeze Flow
H. D. Rowland et al.
727
When polymers are squeezed at nanometer scales, the longest chains unexpectedly flow more easily, even though in theory they should be the most entangled.
Reports continued...

GEOCHEMISTRY
Peptides Enhance Magnesium Signature in Calcite: Insights into Origins of Vital Effects
A. E. Stephenson et al.
A simple hydrophilic peptide helps to regulate the magnesium content of calcite in marine organisms, explaining a complication in using this as an ocean thermometer.

GEOPHYSICS
Trampoline Effect in Extreme Ground Motion
S. Aoi, T. Kunugi, H. Fujiwara
Upward ground acceleration in a recent earthquake in Japan reached about four times that of gravity, as if the upper soil layer were bouncing on a trampoline in the ground below.

ATMOSPHERIC SCIENCE
Tracing the Origin and Fate of NOx in the Arctic Atmosphere Using Stable Isotopes in Nitrate
S. Morin et al.
Measurements of N and O isotopes show that nitrate in the high Arctic is produced when spring sunlight oxidizes pollutants brought from lower latitudes since the past summer.

ANTHROPOLOGY
Ages for the Middle Stone Age of Southern Africa: Implications for Human Behavior and Dispersal
Z. Jacobs et al.
Dating of the first use of symbols and jewelry in South Africa shows that the emergence of modern human behavior was not influenced by just environmental factors.

EVOLUTION
Energy Uptake and Allocation During Ontogeny
C. Hau et al.
A model of how developing animals assimilate food and allocate and store energy for maintenance, growth, and activity accurately predicts data from mammals and birds.

ECOLOGY
Experimental Evidence for Spatial Self-Organization and Its Emergent Effects in Mussel Bed Ecosystems
J. van de Koppel et al.
Interactions among individual mussels result in large-scale spatial patterns in mussel beds that are beneficial to the population—by promoting secondary production, for example.

ECOLOGY
Natal Homing and Connectivity in Atlantic Bluefin Tuna Populations
J. R. Rooker et al.
isotope in the ear bones of tuna reveal that two populations—from the Gulf of Mexico and the Mediterranean—mingle in the Atlantic as adolescents but return home to breed.

NEUROSCIENCE
Glia Are Essential for Sensory Organ Function in C. elegans
T. Bacaj, M. Tevlin, Y. Lu, S. Shabam
Nonneural glial cells are required for the normal operation of the main sensory organ of a nematode, influencing neuronal shape and function, as well as behavior.

GENETICS
HARP Is an ATP-Driven Annealing Helicase
T. Yusufzai and J. T. Kadonaga
The gene deleted in a complex genetic disease is a reverse helicase, a motor-like enzyme that uses adenosine triphosphate to zip up separated strands of DNA.

MOLECULAR BIOLOGY
Polycomb Proteins Targeted by a Short Repeat RNA to the Mouse X Chromosome
J. Zhao, B. K. Sun, J. A. Erwin, J.-J. Song, J. T. Lee
A small RNA cleaved from a larger precursor recruits silencing proteins to the X chromosome to inactivate it in female mammals, which have an extra copy.

IMMUNOLOGY
Deletion of Tprm7 Disrupts Embryonic Development and Thymopoiesis Without Altering Mg2+ Homeostasis
J. Jin et al.
A cation channel that conducts both Ca2+ and Mg2+ is unexpectedly required for normal mouse development, specifically for proper maturation of the thymus and T cells.
RESEARCH ARTICLE: Essential Role of DAP12 Signaling in Macrophage Programming into a Fusion-Competent State
Signaling through the DAP12 adaptor triggers a gene expression profile that makes macrophages competent to fuse and form multinucleated giant cells.

PROTOCOL: High-Resolution Imaging of Redox Signaling in Live Cells Through an Oxidation-Sensitive Yellow Fluorescent Protein
Measure and visualize intracellular changes in the redox state.

JOURNAL CLUB: The HIF-1α-C/EBPα Axis
H. P. Janardhan
Interactions between HIF-1α and C/EBPα may mediate reciprocal functional effects.

PODCAST
R. Linding and A. M. VanHook
Rune Linding explains how combining NetPhorest with a genetic screen enables researchers to gain insight into the relationships among the identified players.

Enthusiasm for virology.

The Pathways to Independence Award: Early Returns
S. Carpenter
NIH’s new transition awards program seems to be achieving its goal.

The Other Life Sciences Industry
C. Mintz
The medical devices and diagnostics industry is underappreciated as a life sciences career destination.

A Virologist With a Contagious Enthusiasm
E. Pain
French virologist Ali Saib is praised for his research achievements and efforts to attract a diversity of people to science.
