COVER

Two direct detections of extrasolar planet candidates. Top: Keck Telescope colored infrared image of star HR 8799, for which the starlight is masked, showing three surrounding planets (red dots). Bottom: Superposed Hubble Space Telescope visible images from 2 years apart, tracing the orbit of a planet surrounding the star Fomalhaut. See pages 1345 and 1348.

MICROBIOLOGY
AMPylation of Rho GTPases by Vibrio VopS Disrupts Effector Binding and Downstream Signaling
M. L. Yarbrough, Y. Li, L. N. Kinch, N. V. Grishin, H. L. Ball, K. Orth
A GI-active pathogen destroys intestinal cells, in part by improperly modifying a host signaling protein, causing loss of cell shape and contributing to cell death.

CELL BIOLOGY
Detection of GTP-Tubulin Conformation in Vivo Reveals a Role for GTP Remnants in Microtubule Rescues
A. Dimitrov et al.
GTP-bound tubulin is found at microtubule ends in living cells and also within microtubules, where it may promote repolymerization and avert microtubule collapse.
1353

RESEARCH ARTICLES
ASTRONOMY
Optical Images of an Exosolar Planet 25 Light-Years from Earth
P. Kalas et al.
Images from the Hubble Space Telescope reveal a Jupiter-sized planet, perhaps with a surrounding dust disk, orbiting about 115 astronomical units from a nearby main sequence star.
1345

CELL BIOLOGY
Detection of GTP-Tubulin Conformation in Vivo Reveals a Role for GTP Remnants in Microtubule Rescues
A. Dimitrov et al.
GTP-bound tubulin is found at microtubule ends in living cells and also within microtubules, where it may promote repolymerization and avert microtubule collapse.

CHEMISTRY
A Cryptand-Encapsulated Germanium(II) Dication
P. A. Rupar, V. N. Staroverov, K. M. Baines
A cage-like molecule typically used to sequester hard metal cations such as Ca\(^{2+}\) in solution proves capable of capturing the softer, elusive free germanium ion Ge\(^{2+}\). >> Perspective p. 1333

GEOCHEMISTRY
Carbonatite Melts and Electrical Conductivity in the Asthenosphere
F. Gaillard et al.
The electrical conductivity of molten carbonates is higher than that of silicate minerals; thus, minor amounts of carbonate melt could explain electrical signals of Earth’s mantle.
>> Perspective p. 1338

BIOCHEMISTRY
Tight Regulation of Unstructured Proteins: From Transcript Synthesis to Protein Degradation
J. Gsponer et al.
Yeast proteins with unstructured regions tend to be highly regulated, consistent with the idea that these regions may mediate critical regulatory protein-protein interactions.
>> Perspective p. 1340

BIOCHEMISTRY
Structural Evidence for Common Ancestry of the Nuclear Pore Complex and Vesicle Coats
S. G. Brohawn et al.
The protein complex that controls entry and exit from the cell nucleus shares a structural element with vesicle coat proteins, suggesting that it is built around a lattice-like scaffold.

ECOLOGY
The Widespread Threat of Calcium Decline in Fresh Waters
A. Jeziorski et al.
As calcium levels decline in Canadian lakes, populations of a keystone prey crustacean are being depleted, with likely consequences for freshwater food webs.

MEDICINE
Genomic Analysis of the Clonal Origins of Relapsed Acute Lymphoblastic Leukemia
C. G. Mullighan et al.
The cells responsible for relapse of a particular type of leukemia are often not the same cells that gave rise to the original disease.

PLANT SCIENCE
A Genetic Framework for the Control of Cell Division and Differentiation in the Root Meristem
R. Dello Ioio et al.
The number of stem cells in plant roots is controlled by an auxin-cytokine feedback loop in which a particular gene integrates signals from both hormones.

MOLECULAR BIOLOGY
Chromosome Alignment and Transvection Are Antagonized by Condensin II
T. A. Hartl, H. F. Smith, G. Bosco
A Drosophila protein required for dissolution of homologous chromosome bundles independently prevents long-distance effects of one allele on the transcription of its homolog.

MOLECULAR BIOLOGY
An Epigenetic Role for Maternally Inherited piRNAs in Transposon Silencing
J. Brennecke et al.
In Drosophila, small RNAs derived from transposons are inherited from the mother and directly inhibit activation of these potentially detrimental transposons in offspring. >> Science Podcast

MICROBIOLOGY
PA-824 Kills Nonreplicating Mycobacterium tuberculosis by Intracellular NO Release
R. Singh et al.
An unusual drug candidate for resistant tuberculosis generates nitrous acid and thus acts as an intracellular nitric oxide donor, augmenting the innate immune system.

CELL BIOLOGY
Absence of the SRC-2 Coactivator Results in a Glycogenopathy Resembling Von Gierke’s Disease
A. R. Chopra et al.
In mice, a coactivator binds to a nuclear orphan receptor and regulates glucose-6-phosphatase transcription and thus glucose homeostasis.
