AMPylation of Rho GTPases by *Vibrio* VopS Disrupts Effector Binding and Downstream Signaling
M. L. Yarbrough, Y. Li, L. N. Kinch, N. V. Grishin, H. L. Ball, K. Orth
A GI-active pathogen destroys intestinal cells, in part by improperly modifying a host signaling protein, causing loss of cell shape and contributing to cell death.
10.1126/science.1166382

Universal Theory of Nonlinear Luttinger Liquids
A. Imambekov and L. I. Glazman
A theory of one-dimensional quantum liquids is generalized from linear interactions among particles to nonlinear ones, affecting, for example, predicted tunneling dynamics.

Comment on “Climate-Driven Ecosystem Succession in the Sahara: The Past 6000 Years”
V. Brovkin and M. Claussen
full text at www.sciencemag.org/cgi/content/full/322/5906/1326b

Response to Comment on “Climate-Driven Ecosystem Succession in the Sahara: The Past 6000 Years”
S. Kröpelin, D. Verschuren, A.-M. Lézine
full text at www.sciencemag.org/cgi/content/full/322/5906/1326c

A Simple Law for Ice-Shelf Calving
R. B. Alley et al.
An empirical model of iceberg production as an ice shelf that buttresses a glacier spread may help to predict glacial flow and sea level rise as Earth’s climate warms.
1344

Detection of GTP-Tubulin Conformation in Vivo Reveals a Role for GTP Remnants in Microtubule Rescues
A. Dimitrov et al.
GTP-bound tubulin is found at microtubule ends in living cells and also within microtubules, where it may promote repolymerization and avert microtubule collapse.
1353

Resolving Vacuum Fluctuations in an Electrical Circuit by Measuring the Lamb Shift
A. Fragner et al.
A solid-state qubit in an electrical circuit connected to a vacuum field shows a shift in its transition energy level, a classic quantum effect typically seen in isolated atoms.

Allow 4 weeks, giving old and new addresses and 8-digit account number.

GEOCHEMISTRY
Carbonatite Melts and Electrical Conductivity in the
Asthensosphere
F. Gaillard et al.
The electrical conductivity of molten carbonates is higher than that of silicate minerals; thus, minor amounts of carbonate melt could explain electrical signals of Earth’s mantle.

>> Perspective p. 1338

BIOCHEMISTRY
Tight Regulation of Unstructured Proteins: From Transcript Synthesis to Protein Degradation
J. Gsponer et al.
Yeast proteins with unstructured regions tend to be highly regulated, consistent with the idea that these regions may mediate critical regulatory protein-protein interactions.

>> Perspective p. 1340

BIOCHEMISTRY
Structural Evidence for Common Ancestry of the Nuclear Pore Complex and Vesicle Coats
S. G. Brahawn et al.
The protein complex that controls entry and exit from the cell nucleus shares a structural element with vesicle coat proteins, suggesting that it is built around a lattice-like scaffold.

ECOLOGY
The Widespread Threat of Calcium Decline in Fresh Waters
A. Jeziorski et al.
As calcium levels decline in Canadian lakes, populations of a keystone prey crustacean are being depleted, with likely consequences for freshwater food webs.

MEDICINE
Genomic Analysis of the Clonal Origins of Relapsed Acute Lymphoblastic Leukemia
C. G. Mullighan et al.
The cells responsible for relapse of a particular type of leukemia are often not the same cells that gave rise to the original disease.

PLANT SCIENCE
A Genetic Framework for the Control of Cell Division and Differentiation in the Root Meristem
R. Dello Ioio et al.
The number of stem cells in plant roots is controlled by an auxin-cytokine feedback loop in which a particular gene integrates signals from both hormones.

SCIENCE (ISSN 0036-8075) is published weekly on Friday, except the last week in December, by the American Association for the Advancement of Science, 1200 New York Avenue, NW, Washington, DC 20005. Periodicals Mail postage (publication No. 484460) paid at Washington, DC, and additional mailing offices. Copyright © 2008 by the American Association for the Advancement of Science. The title SCIENCE is a registered trademark of the AAAS. Domestic individual membership and subscription (51 issues): $144 ($10.00 current issue, $15.00 back issue prepaid includes surface postage; bulk rates on request). Domestic institutional subscription (51 issues): $770; Foreign postage extra: Mexico, Caribbean (surface mail) $355; other countries (air assist delivery) 185. First class, airmail, student, and emeritus rates on request. Canadian rates with GST available upon request, GST #1254 88122. Publications Mail Agreement Number 1069624. SCIENCE is printed on 30 percent post-consumer recycled paper. Printed in the U.S.A.

Change of address: Allow 4 weeks, giving old and new addresses and 8-digit account number. Postmaster: Send change of address to AAAS, P.O. Box 96378, Washington, DC 20090-6378.
Single-copy sales: $10.00 current issue, $15.00 back issue prepaid includes surface postage; bulk rates on request. Authorization to photocopy material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that $20.00 per article is paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923. Science is indexed in the Reader’s Guide to Periodical Literature and in several specialized indexes.

MOLECULAR BIOLOGY
Chromosome Alignment and Transvection Are Antagonized by Condensin II
T. A. Hartl, H. F. Smith, G. Bosco
A Drosophila protein required for dissolution of homologous chromosome bundles independently prevents long-distance effects of one allele on the transcription of its homolog.

>> Science Podcast

MOLECULAR BIOLOGY
An Epigenetic Role for Maternally Inherited piRNAs in Transposon Silencing
J. Brennecke et al.
In Drosophila, small RNAs derived from transposons are inherited from the mother and directly inhibit activation of these potentially detrimental transposons in offspring.

MICROBIOLOGY
PA-824 Kills Nonreplicating Mycobacterium tuberculosis by Intracellular NO Release
R. Singh et al.
An unusual drug candidate for resistant tuberculosis generates nitrous acid and thus acts as an intracellular nitric oxide donor, augmenting the innate immune system.

>> Science Podcast

CELL BIOLOGY
Absence of the SRC-2 Coactivator Results in a Glycogenopathy Resembling Von Gierke’s Disease
A. R. Chopra et al.
In mice, a coactivator binds to a nuclear orphan receptor and regulates glucose-6-phosphatase transcription and thus glucose homeostasis.
Did Icebergs Warm the World?
Errant ice might have driven ancient surges of carbon dioxide.

Scientists Untangle Woolly Mammoth Genome
New data give clues to creature’s evolution and hardiness.

When a Flood Beats a Trickle
Old-fashioned irrigation saves water.

Can your career spare 15 minutes?

Tooling Up: 15 Minutes to a Better Interview
D. Jensen
The basic rules of interview courtesy and etiquette are worth reviewing.

Young Italian Scientists Take to the Streets
E. Pain
Italian scientists on short-term contracts protest cuts in research funding and jobs.

From the Archives: Cheating, Betrayal, Denial, and Lies
M. P. DeWhyse
As Thanksgiving approached, our Educated Woman realized that grad school was not everything she had anticipated.
