COVER
As students become absorbed with technology-based games, educators grapple with how best to use technology. Immersive simulations represent one way in which new media can enhance traditional learning experiences. See the special section beginning on page 53.

POLICY FORUM
43 “True” Conservation Progress
E. McDonald-Madden et al.

PERSPECTIVES
45 How Old Is That Star?
D. R. Soderblom

46 Cloaking with Curved Spaces
A. Nicolet and F. Zolla >> Report p. 110

47 Repair or Replacement—A Joint Perspective
J. Klein

49 A Matter of Preservation
C. Hawkesworth et al.

50 Farewell, Lecture?
E. Mazur
>> Education & Technology section p. 53

51 Mosquitoes Cut Short
A. F. Read and M. B. Thomas >> Report p. 141

BREVIA
94 Nanodiamonds in the Younger Dryas Boundary Sediment Layer
D. J. Kennett et al.
Nanodiamonds in sites across North America suggest that an asteroid impact coincided with cooling 12,900 years ago. >> News story p. 26

95 Glucosinolate Metabolites Required for an Arabidopsis Innate Immune Response
N. K. Clay et al.

101 A Glucosinolate Metabolism Pathway in Living Plant Cells Mediates Broad-Spectrum Antifungal Defenses
P. Bednarek et al.
Plant cells defend against fungal attack through an innate immunity pathway in which infection triggers glucosinolate synthesis, stimulating formation of a protective callose.

106 Mott Insulating State in Ultraclean Carbon Nanotubes
V. V. Deshpande et al.
Both metallic and semiconducting carbon nanotubes exhibit a radius-dependent energy gap arising from correlated electrons in the tubes.

112 Control of Self-Assembly of DNA Tubules Through Integration of Gold Nanoparticles
J. Sharma et al.
Gold particles incorporated into DNA strands drive the formation of a variety of three-dimensional spiral architectures.

114 Declining Coral Calcification on the Great Barrier Reef
G. De’ath et al.
Calcification by Great Barrier Reef corals decreased by about 14% since 1990, the largest decline in the past 400 years. >> News story p. 27

119 Stretching the Envelope of Past Surface Environments: Neoproterozoic Glacial Lakes from Svalbard
H. Bao et al.
Unusual oxygen isotope compositions indicate that a Precambrian glacial period had an anomalous, perhaps extremely CO2-rich, atmosphere.

122 Why Peer Discussion Improves Student Performance on In-Class Concept Questions
M. K. Smith et al.
In the classroom, discussion among students improves understanding and leads to more accurate answers to questions. >> Education & Technology section p. 53

124 Regulation of Neuronal Survival Factor MEF2D by Chaperone-Mediated Autophagy
Q. Yang et al.
The degradation of a key neuronal survival factor by chaperone-mediated autophagy may contribute to Parkinson’s disease.

127 Signal Sequences Activate the Catalytic Switch of SRP RNA
N. Bradshaw et al.
Newly made proteins destined to be inserted into membranes trigger an RNA switch that promotes initiation of this process.

133 Real-Time DNA Sequencing from Single Polymerase Molecules
J. Eid et al.
Arrays of narrow waveguides can record the action of a DNA polymerase stepping along a primer template, potentially providing a way to sequence DNA molecules.

136 Phage-Mediated Intergeneric Transfer of Toxin Genes
J. Chen and R. P. Novick
Viruses may transfer toxin genes among pathogenic bacteria in raw milk, complicating veterinary use of phage therapy as a bacteriacide.

141 Stable Introduction of a Life-Shortening Wolbachia Infection into the Mosquito Aedes aegypti
C. J. McMeniman et al.
Infection of mosquitoes with a bacterium shortens their lives and reduces disease transmission, without development of resistance. >> Perspective p. 51

CONTENTS continued >>
A Whiff of Mad Cow
D. Albert

In Person: Eggheads and Cheeseheads
J. Fernández

New research may explain why males benefit more between the Ivy League and Big Ten.
