Research is a collaborative process.

We understand and embrace that. For more than 50 years we’ve worked with our customers to deliver the best quality products backed by the best service and support at a responsible price. Because what we do together is too important for anything less, and we think there should be a word for that.

Let’s research, together.

R&D Systems
Tools for Cell Biology Research™
2009 Catalog Available Now!

OFFERING MORE THAN 15,000 QUALITY PRODUCTS for Cell Biology Research.

R&D Systems is a leading supplier of cell biology reagents with over 20 years of experience serving the research community. More than 97% of the products supplied by R&D Systems are developed and manufactured at our own facilities. This enables us to maintain strict manufacturing and quality control standards, ensuring that our reagents meet the high levels of performance and consistency expected by our customers.

DNA Sequencing Flowgram: Each bar within the flowgram represents a discrete nucleotide (A, T, C, or G) and the height of the bar corresponds to the number of nucleotides detected. Although the majority of sequencing reads are 400 to 500 bases, the above flowgram represents a sequencing read of 543 bases.

For life science research only. Not for use in diagnostic procedures.

Introducing the GS FLX Titanium Reagents

- Obtain sequencing read lengths of 400 to 500 bases.
- Generate more than 1 million sequencing reads per 10-hour instrument run.

Biacore systems

from inspiration ...to publication

Highest quality, information-rich interaction data from Biacore™ systems deepen your understanding of molecular mechanisms and interaction pathways and enable you to add function to structure.

Select the perfect solution for your application and draw conclusions with confidence – from the company that continues to set the standard for label-free protein interaction analysis.

www.biacore.com
Automated solutions from sample to result:

- The widest choice of sample processing protocols
- Low-, medium-, and high-throughput automation
- Leading solutions for molecular diagnostics
- Plug-and-play automated sample preparation
- Quantitative, real-time PCR detection
- Automated analysis of DNA fragments and RNA
- High-resolution sequence-based DNA detection and quantification
- HPV testing

Making improvements in life possible — www.qiagen.com
Cell-free protein expression delivers data faster

Now, Get the Most Reliable System for Your Specific Needs

Express proteins in hours instead of days. Referenced in thousands of citations, Promega is the choice for cell-free expression. Select your system from the most comprehensive product portfolio commercially available. Whether you require eukaryotic- or prokaryotic-based expression from either DNA or RNA templates, Promega has the right system for you.

**E. coli expression**
- Transform and overnight growth
- Induction and protein expression
- Purification/dialysis
- Use in application

Cellular Imaging & Analysis

NEB introduces SNAP-tag™ and CLIP-tag™ protein labeling systems. These innovative technologies provide simplicity and extraordinary versatility to the imaging of mammalian proteins \textit{in vivo}, and to protein capture experiments \textit{in vitro}. The creation of a single genetic construct generates a fusion protein which, when covalently attached to a variety of fluorophores, biotin, or beads provides a powerful tool for studying the role of proteins in living and fixed cells.

\textbf{Advantages:}
\begin{itemize}
  \item \textbf{Versatile} - Compatible systems enable dual labeling
  \item \textbf{Flexible} - Multiple fluorophores allow for choice & flexibility
  \item \textbf{Innovative} - A range of applications is possible with a single construct
\end{itemize}

Live COS-7 cells transiently transfected with pSNAPm-Tubulinβ. Cells were labeled with SNAP-Cell TMR-Star (green pseudocolor) for 30 minutes and counterstained with Hoechst 33342 (blue) for nuclei.

\textbf{SNAP-tag Technology:} SNAP-tag (gold) fused to the protein of interest (blue) sells labels releasing guanine.
FROM DISCOVERY TO PUBLISHING
ENDNOTE X2 GETS YOU THERE FASTER.

Don’t waste time in the slow to publish lane. Let EndNote X2 take you there, faster. Revered by millions for its blazing online search speeds, instantaneous Cite While You Write® technology and organizing references in a snap, EndNote X2 has all the high performance features you could possibly want in an easy-to-use bibliography software, and more.

Now, EndNote X2 can locate full text and connect it with references while you move on down the research road. Within a single window you can group references automatically, search your favorite online databases and transfer to and from your EndNote Web account, all in record time.

So now that you’re up to speed on what EndNote X2 has to offer, it’s easy to see how EndNote makes you the leader of the pack.

Genomics of Energy & Environment is the topic of the 2009 Department of Energy Joint Genome Institute (DOE JGI) User Meeting, which will be held March 25-27 in Walnut Creek, California. This year’s meeting will specifically emphasize the genomics of renewable energy strategies, biomass conversion to biofuels, environmental gene discovery, and engineering of fuel-producing organisms. The meeting will feature presentations by leading scientists advancing these topics. The meeting will also include informatics workshops and tutorials for the analysis of prokaryotic and eukaryotic genomes, and the evaluation of new sequencing platforms and their applications. Poster submissions are encouraged. Pre-registration is required as interest is expected to exceed meeting capacity again this year. Registration and a preliminary agenda can be found at: www.jgi.doe.gov.
A Portfolio of Real-Time Possibilities. Just for Me.

Only Applied Biosystems delivers superior end-to-end workflow solutions for all your real-time PCR applications. Finding a line of real-time PCR solutions to advance your experiments from start to finish is all about knowing where to look. Applied Biosystems offers a range of quality real-time PCR instruments, reagents, assays, service, and support to help accelerate your research at every step—saving you time and money along the way. When you want a real-time portfolio that can take you from sample prep to proven results, talk to us. We have a growing range of affordable real-time PCR solutions optimized just for you!

As Flexible as You Want to Be.
From the publishers of *Science, Science Signaling*, formerly known as *Science*’s STKE, now features top-notch, peer reviewed, original research. Each week the journal will publish leading-edge findings in addition to the current features, including Perspectives, Reviews, Protocols, Meeting Reports, Book Reviews, Teaching Resources, and the Database of Cell Signaling.

*Science Signaling* showcases high-impact research in cellular regulation in such fields as molecular biology, development, immunology, neuroscience, microbiology, physiology and medicine, pharmacology, biochemistry, cell biology, bioinformatics, and systems biology. Submit your research that provides new concepts and new understanding of biological signal transduction for consideration.

Subscribing to *Science Signaling* ensures that you and your lab have the latest cell signaling resources. From basic science to design of therapeutics, from molecules to networks and systems design, read the best source – *Science Signaling*.

Magnifying your opportunities is our main focus. We’re your source for connecting with the industry's top employers. We’re the experts and primary tool for accessing the latest and most relevant career information across the globe.

Our newly designed website offers improved features that help you magnify career opportunities and your personal potential. Whether you're seeking a new job, career advancement in your chosen field, or ways to stay current on industry trends, Science Careers will broaden your scope for a brighter future.

**Improved Website Features:**
- Relevant Job Email Alerts
- Improved Resume Uploading
- Content Specific Multimedia Section
- Facebook Profile

**Job Search Functionality:**
- Save and Sort Jobs
- Track Your Activity
- Search by Geography
- Enhanced Job Sorting
New Products

X-Ray Area Detectors
The High Efficiency (HE) series X-ray area detectors feature back-illuminated charge-coupled devices (CCD) permanently bonded to the fiber optic tapers. They produce high-resolution, low-noise images over a wide range of X-ray energies, but with higher electrooptical gain due to the backlit CCD technology. A baseline stabilization option is standard. X-rays are converted to light by a scintillator layer at the front of the fiber optic taper array, which travels through the fiber optic tapers to the back-thinned CCD devices.

SAM Methyltransferase Assay
The SAM510:SAM Methyltransferase Assay is a colorimetric, continuous enzyme-coupled assay for the kinetic analysis of protein S-adenosylmethionine (SAM) methyltransferase enzymes with no radioactive labels. The assay involves the removal of the methyl group from SAM-generating S-adenosylhomocysteine, which is rapidly converted to S-ribosylhomocysteine and adenine by the included adenosylhomocysteine nucleosidase. Finally, the adenine is converted to hypoxanthine by adenine deaminase, which in turn is converted to urate and hydrogen peroxide. The rate of production is measured with a colorimetric assay by an increase in absorbance at 510 nm.

Syringe Filters
The 33-mm Millex syringe filters with Millipore Express Plus membranes are now available in 0.22-µm and 0.45-µm pore sizes. They deliver fast filtration rates with low protein-binding properties. With 20 percent more surface area than standard 25-mm devices, the new filters offer a high process volume (200 ml) and burst strength (150 psig), allowing for high operating pressure. Without the risk of filters bursting or clogging, researchers need not use multiple filters per sample or worry about incomplete filtration. Because 33-mm filters have a low hold-up volume, there is minimal sample loss during filtration. The low-protein-binding membrane allows maximum recovery of soluble proteins, such as serum components typically added to cell culture media, for reproducible cell growth and better downstream results.

Absorbent Protective Paper
BenchGuard is a highly absorbent paper for protecting benches and surfaces against liquid spills. It has a strong polyethylene coating on one side and when placed paper side up it quickly absorbs hazardous spills, protecting the benchtop and reducing contamination risks. BenchGuard is available in two absorbencies: 400 ml per cubic meter and 800 ml per cubic meter. It is offered in packs of 50 or 100 sheets and in roll form. It is applicable for use in various laboratories, including life sciences, microbiology, radiochemistry, and animal research.

Liquid Handling Robot
The Cavro Omni Robot is a general-purpose, original-equipment-manufacturing liquid-handling robot for a wide range of applications in clinical diagnostics, life sciences, and analytical chemistry. Easy to install and operate, the Omni Robot features a modular design that allows it to be configured for many different uses. Its closed-loop positioning system provides the assurance of knowing exactly where the pipetting probe is located at all times, while its high payload opens up a broad range of capabilities. All working parts are hidden to provide a finished appearance. Using the Cavro Integration Kit, any Tecan Cavro pump or robot can be set up for evaluation in a matter of minutes.

Imaging Microscope
The Nicolet iN10 MX infrared imaging microscope enables analysts to quickly determine the identity and distribution of chemical species within complex structures and random mixtures on a microscopic scale. It performs rapid and accurate analysis of materials ranging from forensic evidence to high-tech polymer composites. The instrument’s software guides the operator through the entire analytical process, from sample loading to final reporting, in a few mouse clicks. It combines machine vision and spectral identification technology to greatly facilitate data acquisition and sample analysis. Its optical efficiency allows chemical images to be generated from highly scattering samples. The system can be equipped with up to three detectors. A room-temperature detector allows point-and-shoot analysis to be performed without liquid nitrogen. This detector can be combined with an efficient slide-on attenuated-total-reflectance sampling device to make the Nicolet iN10 MX as quick and easy to use as a basic infrared spectrometer.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by Science or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.
Spain: Science Business Class

Spain ranks 9th in world scientific output. Between 2003 and 2007, the government budget allocated to R&D grew at the second highest rate. Spain: a country of cultural and scientific talent.
