Spain: Science Business Class

Spain ranks 9th in world scientific output. Between 2003 and 2007, the government budget allocated to R&D grew at the second highest rate. Spain: a country of cultural and scientific talent.
OFFERING MORE THAN 15,000 QUALITY PRODUCTS for Cell Biology Research.

R&D Systems is a leading supplier of cell biology reagents with over 20 years of experience serving the research community. More than 97% of the products supplied by R&D Systems are developed and manufactured at our own facilities. This enables us to maintain strict manufacturing and quality control standards, ensuring that our reagents meet the high levels of performance and consistency expected by our customers.

Biacore systems

from inspiration ...to publication

Highest quality, information-rich interaction data from Biacore™ systems deepen your understanding of molecular mechanisms and interaction pathways and enable you to add function to structure.

Select the perfect solution for your application and draw conclusions with confidence – from the company that continues to set the standard for label-free protein interaction analysis.

www.biacore.com
Enjoy a real-time PCR cycler with outstanding thermal and optical performance
Perform multiple real-time PCR applications and optional high-resolution melting
Benefit from a variety of state-of-the-art analyses
Experience unrivaled robustness and minimal maintenance
Count on reliable results from QIAGEN kits and assays

Discover more at www.qiagen.com/goto/PureDetection.
The 2009 U.S. Department of Energy Joint Genome Institute (DOE JGI) User Meeting will emphasize the genomics of renewable energy strategies, biomass conversion to biofuels, environmental gene discovery, and engineering of fuel-producing organisms. The meeting will feature presentations by leading scientists advancing these topics.

Poster submissions are encouraged.

Pre-registration is required as interest is expected to exceed meeting capacity again this year.

Registration and a preliminary agenda can be found at: www.jgi.doe.gov

From the publishers of *Science, Science Signaling*, formerly known as *Science’s* STKE, now features top-notch, peer reviewed, original research. Each week the journal will publish leading-edge findings in cellular regulation including:

- Molecular Biology
- Development
- Physiology and Medicine
- Immunology
- Neuroscience
- Microbiology
- Pharmacology
- Biochemistry
- Cell Biology
- Bioinformatics
- Systems Biology

Subscribing to *Science Signaling* ensures that you and your lab have the latest cell signaling resources. For more information visit sciencesignaling.org

Now accepting original research submissions at: sciencesignaling.org/about/help/research.dtl
INFINITE POSSIBILITIES

Cellular Imaging & Analysis

NEB introduces SNAP-tag™ and CLIP-tag™ protein labeling systems. These innovative technologies provide simplicity and extraordinary versatility to the imaging of mammalian proteins in vivo, and to protein capture experiments in vitro. The creation of a single genetic construct generates a fusion protein which, when covalently attached to a variety of fluorophores, biotin, or beads provides a powerful tool for studying the role of proteins in living and fixed cells.

Advantages:

**Versatile** - Compatible systems enable dual labeling

**Flexible** - Multiple fluorophores allow for choice & flexibility

**Innovative** - A range of applications is possible with a single construct

![SNAP-tag Technology](image)

SNAP-tag Technology: SNAP-tag (gold) fused to the protein of interest (blue) and labels releasing guanine.
Each of your valuable samples deserves the best treatment. See for yourself how the eppendorf Plate® will save time and reduce costs.

Sample loss in plates can be time consuming and expensive. Therefore, the close environment of each sample should be adapted to its specific quality and purity needs. This can involve a specific purity level or the absence of certain substances, but also stability, reliability, or geometry. The eppendorf Plate® is designed to cover all of the specific needs of your samples!

Bring out the best! Eppendorf Deepwell Plates:
- 30% faster and easier well identification with the unique OptiTrack® Matrix
- High dimensional stability for efficient centrifugation and mixing
- Minimized sample loss with DNA or Protein LoBind quality and RecoverMax® well design

Learn more about Eppendorf Deepwell Plates:

Make the best of it!
Top quality for your sample.
Robotic Platform
AutoMAP is a robotic platform for high throughput microplate, tube, and vial processing in a self-contained environment for a variety of drug discovery applications. The platform can be operated as a stand-alone system or integrated with additional platforms, including the MiniStore (an automated sample management system) or MACCS (an automated cell culture system). Temperature, humidity, carbon dioxide, nitrogen, or other gases or gas mixtures can be regulated internally, ensuring optimized experimental conditions. It offers a biological safety cabinet level 1 classification, minimizing potential hazards to laboratory personnel and the environment by isolating dangerous biological agents in an enclosed facility. Its list of applications is almost limitless, including chemical and biological sample management, polymerase chain reaction purification and preparation, cycle sequencing preparation, sample normalization, chemical assays, plate replication, cell-based assays, and more.

Portable Light Box
The ViewOne is a portable light box designed to fit into limited laboratory space. Measuring 20.5 cm by 14 cm by 0.6 cm and weighing 160 g, it is slightly larger than a passport. The ViewOne LED provides a consistent white light source for hours of dependable operation. It has three selectable light intensities and fixed retainers molded in to hold petri dishes and enzyme-linked immunosorbent assay plates in place. Its smooth, water-resistant surface makes it easy to wipe down and clean.

Pipetting System
An integrated pipetting system with epT.I.P.S. LoRetention features “Pearl Effect” technology to ensure maximum sample recovery when dispensing detergent solutions. The low-retention tips are designed for users engaged in polymerase chain reaction (PCR), real-time PCR, proteomics, and molecular biology applications. When liquids that contain detergents wet polypropylene, they leave a film on a standard tip’s surface that can lead to loss of precious sample, increased consumption of reagents, and poor precision and reproducibility. The “Pearl Effect” technology involves no coating or additive that might affect or bleed into the sample, but instead renders the tip surface ultrahydrophobic through a modification at the molecular level so detergent solutions roll off completely.

Electronic Laboratory Notebook
The Symyx Notebook is an electronic laboratory notebook (ELN) that is configurable to meet the needs of biologists and analytical chemists. It can simplify operations and lower costs by enabling research and development organizations to replace multiple discipline-specific ELNs with a single, multidiscipline application that is deployable across the enterprise. Built on an enterprise-scale informatics platform, Symyx Notebook consolidates experimental data from multiple domains into shareable and searchable documents controlled by customizable document workflows with secure document versioning, electronic signature, and audit trails.

Protein Assay
CB-X Protein Assay is designed to be compatible with all commonly used buffers and reagents. For samples in simple aqueous buffers, CB-X is a sensitive, single-reagent assay that can be performed in five minutes. For complicated protein samples, CB-X is supplied with reagents to clean up the samples and remove all reagents and chemicals that interfere with accurate protein estimation. These reagents include detergents, chaotropes, reducing agents, alkylating agents, sugars, high salt concentrations, buffering agents, and chelating agents. The cleanup stage and subsequent protein assay is performed in a single tube to ensure no protein loss and to maintain the accuracy of the assay.

Antigen Standards
Verify Antigen Standard is a collection of tagged overexpression cell lysates for use as protein immunoblot standards. The line covers 5,000 overexpressed human proteins, each with a built-in C-terminal Myc/DDK tag for easy expression verification and antibody validation. These initial 5,000 Verify Antigen Standards will not only provide scientists with easy access to a validated antigen of interest, they can also be easily quantified with an Myc/DDK tag standard to provide definitive detection sensitivity of a particular antibody.

AAAS, publisher of Science, presents:
2009 Annual Meeting
OUR PLANET AND ITS LIFE: ORIGINS AND FUTURES
12–16 February • Chicago

▷ Probe the evolution of emotions, language, morality, microbes, the universe, and more
▷ Join leaders who are tackling the climate change crisis and shaping sustainability science
▷ Get current on how the U.S. elections will affect policy and funding

AAAS wishes to thank the following sponsors and supporters:

Presenting Sponsor

In addition generous funding for AAAS Awards is provided by Johnson & Johnson Pharmaceutical Research & Development, L.L.C. and Affymetrix.

Too Fast!

Rapid plasmid preps free valuable lab time

New System Answers Need for Speed, Purity and Yield

Who switched my preps?

I used to finish my plasmid preps after dark, but with PureYield™ I finished early and walked out right into the sun. Not a good idea!

PureYield™ plasmid preps...

Good for you. Bad for Vlad.

Time savings comparing PureYield™ vs. a leading competitor

Find out why Vlad is upset and qualify for a FREE PureYield™ plasmid prep system at: vladinthelab.com
