COVER
An image of Mare Moscoviense on the lunar farside, taken by the Terrain Camera aboard the SELENE (Kaguya) spacecraft on 17 January 2008. Crater frequency distributions derived from such images yield ages of about 2.5 billion years for several volcanic deposits in this mare, indicating that volcanism on the lunar farside lasted about 500 million years longer than previously thought. See page 905.

896  Tracking Long-Distance Songbird Migration by Using Geolocators
B. J. M. Stutchbury et al.

A miniature recorder mounted on purple martins and wood thrushes allows mapping of migration routes between North America and the Neotropics.

REPORTS

897  Lunar Global Shape and Polar Topography Derived from Kaguya-LALT Laser Altimetry
H. Araki et al.

An analysis of high-resolution topographic data helps explain how surface features are supported by the lithosphere.

899  Farside Gravity Field of the Moon from Four-Way Doppler Measurements of SELENE (Kaguya)
N. Namiki et al.

A gravity field model reveals differences in the lithosphere between the Moon’s far- and nearsides.

901  Long-Lived Volcanism on the Lunar Farside Revealed by SELENE Terrain Camera
J. Haruyama et al.

Images of the Moon by the SELENE spacecraft and revised dates of lava flows by crater counts imply that episodic volcanism on the farside lasted to 2.5 billion years ago.

903  Lunar Radar Sounder Observations of Subsurface Layers Under the Nearside Maria of the Moon
T. Ono et al.

A period of reduced volcanism may account for extensive regions of radar-reflective minerals that underlie some major lunar basalt flows.

905  Equilibrium Iron Isotope Fractionation at Core-Mantle Boundary Conditions
V. B. Polyakov

Calculated iron fractionation factors at high pressures may explain the different isotopic values found for Earth, Mars, and meteorites.

907  Skyrmion Lattice in a Chiral Magnet
S. Mühlbauer et al.

Magnetic ordering arises from a repeating network of spins caught in a spiral vortex structure.

909  Observation of Unconventional Quantum Spin Textures in Topological Insulators
D. Hsieh et al.

Spin imaging reveals an insulating state that results from the entanglement of a macroscopic number of spins.

911  Coherence Factors in a High-Tc Cuprate Probed by Quasi-Particle Scattering Off Vortices
T. Hanaguri et al.

The momentum-dependent coherence factors in a high-temperature superconductor are revealed by introducing magnetic vortices.

913  Polynnaviruses of Braconid Wasps Derive from an Ancestral Nudivirus
A. Bézier et al.

Virus-like particles used by parasitic wasps to manipulate host defenses are encoded by virus-related genes incorporated into the wasp genome.

915  Effects of Genetic Perturbation on Seasonal Life History Plasticity
A. M. Wilczek et al.

Interactions among mutation, germination timing, and climate alter flowering patterns in Arabidopsis.

917  The Hallucinogen N,N-Dimethyltryptamine (DMT) Is an Endogenous Sigma-1 Receptor Regulator
D. Fontanilla et al.

An endogenous compound is a ligand for a ubiquitously expressed receptor that binds many synthetic drugs and has been implicated in psychiatric disease.

919  When Your Gain Is My Pain and Your Pain Is My Gain: Neural Correlates of Envy and Schadenfreude
H. Takahashi et al.

Envy is strongest against those with similar attributes, and the most joy is gained from the pain of those envied the most.

921  The Orphan G Protein–Coupled Receptor 3 Modulates Amyloid-Beta Peptide Generation in Neurons
A. Thathiah et al.

A neuronal G protein–coupled receptor can stimulate the generation of the Aβ peptide implicated in Alzheimer’s disease.

923  Differences in Early Gesture Explain SES Disparities in Child Vocabulary Size at School Entry
M. L. Rowe and S. Goldin-Meadow

Pre-verbal communication through gestures can improve a child’s vocabulary.
