COVER
A mosaic of images collected as the MESSENGER spacecraft viewed Mercury obliquely on approach on 6 October 2008. The Rembrandt impact basin, 715 kilometers in diameter, is seen at the center as night falls across its eastern edge. Results from the flyby are discussed in four Reports beginning on page 606 and a Perspective on page 597.

605 Neural Mechanisms of a Genome-Wide Supported Psychosis Variant
C. Esslinger et al.
A genetic polymorphism associated with schizophrenia conveys a risk for abnormal connectivity between brain regions.

REPORTS
606 MESSENGER Observations of Magnetic Reconnection in Mercury’s Magnetosphere
J. A. Slavin et al.
Mercury’s magnetosphere responds more strongly to the influence of the Sun’s magnetic field than does Earth’s magnetosphere.
>> Perspective p. 597

610 MESSENGER Observations of Mercury’s Exosphere: Detection of Magnesium and Distribution of Constituents
W. E. McClointock et al.
High-resolution observations of Mercury’s exosphere reveal different spatial distributions of magnesium, calcium, and sodium.
>> Perspective p. 597

613 The Evolution of Mercury’s Crust: A Global Perspective from MESSENGER
B. W. Denevi et al.
Data from the Mariner 10 and MESSENGER flybys imply that a substantial fraction of Mercury’s surface is volcanic in origin.

618 Evolution of the Rembrandt Impact Basin on Mercury
T. R. Watters et al.
This basin, showing a unique pattern of radial and concentric tectonic features, represents an intermediate stage of filling by volcanic plains.

622 High-Frequency Holocene Glacier Fluctuations in New Zealand Differ from the Northern Signature
J. M. Schofer et al.
The patterns of glacial advances and retreats in New Zealand during the Holocene contrast markedly with those of the Northern Hemisphere.
>> Perspective p. 599

626 Biomolecular Characterization and Protein Sequences of the Campanian Hadrosaur B. canadensis
M. H. Schweitzer et al.
Analysis of well-preserved tissues from an 80-million-year-old hadrosaur support the dinosaur-bird relationship.

636 Competition for Light Causes Plant Biodiversity Loss After Eutrophication
Y. Hautier et al.
A few species take advantage of fertilizer to grow fast, shade out competitors, and reduce the number of species in grassland.

639 ?-Secretase Heterogeneity in the Aph1 Subunit: Relevance for Alzheimer’s Disease
L. Serneels et al.
Targeted knockout of only part of the ?-secretase complex lessens toxicity and still improves disease phenotypes.
>> Perspective p. 603

646 Burst Spiking of a Single Cortical Neuron Modifies Global Brain State
C. T. Li et al.
Stimulation of a single nerve cell triggers a switch between slow wave and rapid eye movement sleep.

649 Exchange of Genetic Material Between Cells in Plant Tissue Grafts
S. Stegemann and R. Bock
Plant genes can transfer between cells and across graft junctions, possibly explaining horizontal gene transfer.

651 Circadian Clock Feedback Cycle Through NAMPT-Mediated NAD+ Biosynthesis
K. M. Ramsey et al.
A nonconventional cytosine is edited out to allow a functional transfer RNA structure to form.

654 Circadian Control of the NAD+ Salvage Pathway by CLOCK-SIRT1
Y. Nakahata et al.
A transcriptional-enzymatic feedback loop controls interactions between metabolism and circadian rhythms in mouse cells.
>> Perspective p. 598

657 A Cytidine Deaminase Edits C to U in Transfer RNAs in Archaea
L. Randau et al.
A nonconventional cytosine is edited out to allow a functional transfer RNA structure to form.

659 A Yeast Hybrid Provides Insight into the Evolution of Gene Expression Regulation
I. Tirsh et al.
Gene expression between species of yeast may diverge, but recombination rewires their offspring into vigorous hybrids.
Abscisic Acid Inhibits Type 2C Protein Phosphatases via the PYR/PYL Family of START Proteins
