COVER
The current global outbreak of influenza A (H1N1) in humans appears to have originated in Mexico from infected pigs. The cover portrait is of “Patient Zero” from La Gloria, Veracruz, who is now well. Fraser et al. (page 1557) report on an initial epidemiological analysis and offer baseline estimates for transmissibility while acknowledging the prevailing uncertainties at this early stage of the epidemic.

BREVIA
1535  Sexual Intercourse Involving Giant Sperm in Cretaceous Ostracode
      R. Matzke-Karasz et al.
      Giant ostracode sperm date back at least 100 million years ago.

RESEARCH ARTICLE
1536  Synapse- and Stimulus-Specific Local Translation During Long-Term Neuronal Plasticity
      D. O. Wang et al.
      Live-cell microscopy reveals local translation during long-term facilitation of Aplysia sensory-motor synapses.
      >> Perspective p. 1527

REPORTS
1540  Solar-Like Oscillations in a Massive Star
      K. Belkacem et al.
      A huge star has been discovered that shows a variety of regular patterns of pulsation.

1542  Colloidal Quantum-Dot Photodetectors Exploiting Multie exciton Generation
      V. Sukhovatkin et al.
      Decay of multiple electron-hole pairs, a hindrance in photovoltaic design, proves a boon to sensitivity in a photoconductive detector.

1545  Aggregation-Induced Dissociation of HCl(H_2O)_4 Below 1 K: The Smallest Droplet of Acid
      A. Gutberlet et al.
      Just four water molecules are sufficient to dissolve the acid HCl into a charged ion pair of proton and chloride.
      >> Perspective p. 1522

1548  Beryllium Dimer—Caught in the Act of Bonding
      J. M. Merritt et al.
      High-resolution spectroscopy maps out the unusual ground state electronic potential of the beryllium dimer.
      >> Perspective p. 1526

1551  Atmospheric Carbon Dioxide Concentration Across the Mid-Pleistocene Transition
      B. Hönisch et al.
      The concentration of CO_2 in the atmosphere has been relatively stable over the past 2.1 million years and never as high as it is today.

1554  Fossil Plant Relative Abundances Indicate Sudden Loss of Late Triassic Biodiversity in East Greenland
      J. C. McElwain et al.
      Plant fossils from East Greenland record an abrupt decrease in abundance as CO_2 levels increased.

1557  Pandemic Potential of a Strain of Influenza A (H1N1): Early Findings
      C. Fraser et al.
      An international collaborative effort has analyzed the initial dynamics of the swine flu outbreak.

1561  Rapid and Accurate Large-Scale Coestimation of Sequence Alignments and Phylogenetic Trees
      K. Liu et al.
      A step-wise algorithm iteratively wraps sequence alignment around a phylogenetic tree to reduce bias caused by errors.
      >> Perspective p. 1528

1565  Structure and Mechanism of an Amino Acid Antipporter
      X. Gao et al.
      The architecture of a membrane protein channel helps explain how Escherichia coli survive the acidic conditions of the stomach.

1569  IL-21 Is Required to Control Chronic Viral Infection
      H. Elsaesser et al.
      Interleukin-21 produced by CD4^+ T cells helps CD8^+ T cells control viral infection in a mouse model.
      >> Perspective p. 1525

1572  A Vital Role for Interleukin-21 in the Control of a Chronic Viral Infection
      J. S. Yi et al.
      The cytokine interleukin-21 has a profound impact on virus-specific T cell responses to chronic infections in mice.
      >> Perspective p. 1525

1576  IL-21R on T Cells Is Critical for Sustained Functionality and Control of Chronic Viral Infection
      A. Fröhlich et al.
      Thymus cells of the immune system require the cytokine interleukin-21 to control chronic viral infections.
      >> Perspective p. 1525

1580  Merkel Cells Are Essential for Light-Touch Responses
      S. M. Maricich et al.
      In the skin, special cells with specific properties endow their afferent nerves with the ability to resolve fine spatial details.
      >> Science Podcast

1583  Recruitment of an Area Involved in Eye Movements During Mental Arithmetic
      A. Knops et al.
      Addition and subtraction are encoded in the same part of the brain that is responsible for eye movements and spatial attention.
