The Phoenix spacecraft on the martian polar plains (68°N latitude). The footpad at the bottom is about 1 meter below the spacecraft deck seen at the lower left. Overlaid images are trenches dug to either nearly pure water ice or ice-cemented soil. Analyses of samples taken from these trenches give clues to the history of the region. Results from the Phoenix mission are discussed in four Reports beginning on page 58.

REVIEW
48 How to Think, Say, or Do Precisely the Worst Thing for Any Occasion
D. M. Wegner

BREVIA
51 Serengeti Birds Maintain Forests by Inhibiting Seed Predators
G. J. Sharam et al.
Fruit-eating birds inhibit seed predation by beetles, a mechanism that is destabilized when disturbance opens the forest canopy.

RESEARCH ARTICLE
52 Dissociable Components of Rule-Guided Behavior Depend on Distinct Medial and Prefrontal Regions
M. J. Buckley et al.
A card-sorting task shows that three distinct regions of the monkey prefrontal cortex perform distinct cognitive functions.

REPORTS
58 H₂O at the Phoenix Landing Site
P. H. Smith et al.
A water ice layer was found 5 to 15 centimeters beneath the soil of the north polar region of Mars.

61 Evidence for Calcium Carbonate at the Mars Phoenix Landing Site
W. V. Boynton et al.
The action of liquid water may have helped to form the calcium carbonate found in the soils around the Phoenix landing site.

64 Detection of Perchlorate and the Soluble Chemistry of Martian Soil at the Phoenix Lander Site
M. H. Hecht et al.
Most of the chlorine at the Phoenix landing site is in the form of perchlorate, a salt that is highly soluble in water.

68 Mars Water-Ice Clouds and Precipitation
J. A. Whiteway et al.
Laser remote sensing from Mars’ surface revealed water-ice clouds that formed during the day and precipitated at night.

70 A Coherent Single-Hole Spin in a Semiconductor
D. Brunner et al.
Manipulating holes instead of electrons results in the enhancement of the coherence properties of quantum dots.

73 Self-Assembling Sequence-Adaptive Peptide Nucleic Acids
Y. Ura et al.
A synthetic DNA analog can dynamically adapt its sequence in response to changing templates.

77 Impact of Shifting Patterns of Pacific Ocean Warming on North Atlantic Tropical Cyclones
H.-M. Kim et al.
Warming of the central Pacific sea surface causes different patterns of atmospheric circulation than do El Niño events.

80 Successful Conservation of a Threatened Maculinea Butterfly
J. A. Thomas et al.
Prediction of population dynamics in relation to habitat requirements has led to a conservation success in the UK.

83 Meningococcal Type IV Pili Recruit the Polarity Complex to Cross the Brain Endothelium
M. Coureuil et al.
Adhesion of bacteria to cells lining blood vessels in the brain induces them to part and allows pathogen invasion.

87 Role of Layer 6 of V2 Visual Cortex in Object-Recognition Memory
M. F. López-Aranda et al.
Experiments reveal the localization of short- and long-term visual memory encoding in the rat visual cortex.

90 Jmjδ6 Catalyses Lysyl-Hydroxylation of U2AF65, a Protein Associated with RNA Splicing
C. J. Webb et al.
An oxygenase with an important role in vertebrate development hydroxylates a messenger RNA splicing factor.

93 Essential Role of the Glycosyltransferase Sxc/Ogt in Polycomb Repression
M. C. Gambetta et al.
The Polycomb-group protein super sex combs acts to glycosylate a second Polycomb repressor protein.

96 Ligand-Gated Chloride Channels Are Receptors for Biogenic Amines in C. elegans
N. Ringstad et al.
An expanded family of receptor channels that bind neurotransmitters in worms might help to explain behavioral effects in humans.

100 LXR Regulates Cholesterol Uptake Through Idol-Dependent Ubiquitination of the LDL Receptor
N. Zelcer et al.
Cholesterol metabolism is regulated by a signaling pathway that targets the LDL receptor for degradation.
Transmission and Pathogenesis of Swine-Origin 2009 A(H1N1) Influenza Viruses in Ferrets and Mice
T. R. Maines et al.
10.1126/science.1177238

Pathogenesis and Transmission of Swine-Origin 2009 A(H1N1) Influenza Virus in Ferrets
V. J. Munster et al.
Animal experiments compare the dynamics and effects of the virus causing the 2009 flu outbreak to those of seasonal H1N1 flu.
10.1126/science.1177127
>> News story p. 17

The Dynamics of Phenotypic Change and the Shrinking Sheep of St. Kilda
A. Ozgul et al.
Environmental change has led to decreasing body size in a sheep population over 20 years, despite selection for increased size.
10.1126/science.1173668

Radio Imaging of the Very-High-Energy γ-Ray Emission Region in the Central Engine of a Radio Galaxy
The VERIS Collaboration et al.
Particles are accelerated to very high energies in close proximity to a super-massive black hole.
10.1126/science.1175558

A Population of Gamma-Ray Millisecond Pulsars Seen with the Fermi Large Area Telescope
A. A. Abdo et al.
These objects appear to share a common emission mechanism with standard gamma-ray pulsars.
10.1126/science.1176113

Detection of 16 Gamma-Ray Pulsars Through Blind Frequency Searches Using the Fermi LAT
A. A. Abdo et al.
Most of these identifications correspond to gamma-ray sources long suspected to be pulsars.
10.1126/science.1176114

A. A. Abdo et al.
These objects appear to share a common emission mechanism with standard gamma-ray pulsars.

The Signal Transduction Knowledge Environment
EDITORIAL GUIDE: Challenging Times
M. B. Yaffe
The deluge of NIH “challenge grants” promises to strain the reviewer pool.
RESEARCH ARTICLE: Therapeutically Targeting ErbB3—A Key Node in Ligand-Induced Activation of the ErbB Receptor–PI3K Axis
B. Schoeberl et al.
Computational modeling of the ErbB signaling network affirms ErbB3 as a therapeutic target.
RESEARCH ARTICLE: PKCε Regulation of an α5 Integrin–ZO-1 Complex Controls Lamellae Formation in Migrating Cancer Cells
S. Tuomi et al.
Phosphorylated ZO-1 relocates from tight junctions to lamellae to associate with α5 integrin and control migration.
PERSPECTIVE: AiMing 2 Detect Foreign DNA
A. M. Krieg
AIM2 is a receptor for cytoplasmic double-stranded DNA and induces the formation of an IL-1β–secreting inflammasome.
PODCAST
U. B. Nielsen and A. M. VanHook
Mathematical modeling of signaling pathways can be used to identify candidate targets for cancer therapies.
GLOSSARY
Find out what ERM, FMN, and LH mean in the world of cell signaling.
