The Phoenix spacecraft on the martian polar plains (68°N latitude). The footpad at the bottom is about 1 meter below the spacecraft deck seen at the lower left. Overlaid images are trenches dug to either nearly pure water ice or ice-cemented soil. Analyses of samples taken from these trenches give clues to the history of the region. Results from the Phoenix mission are discussed in four Reports beginning on page 58.

61 Evidence for Calcium Carbonate at the Mars Phoenix Landing Site
W. V. Boynton et al.
The action of liquid water may have helped to form the calcium carbonate found in the soils around the Phoenix Landing site.

64 Detection of Perchlorate and the Soluble Chemistry of Martian Soil at the Phoenix Lander Site
M. H. Hecht et al.
Most of the chlorine at the Phoenix landing site is in the form of perchlorate, a salt that is highly soluble in water.

68 Mars Water-Ice Clouds and Precipitation
J. A. Whiteway et al.
Laser remote sensing from Mars’ surface revealed water-ice clouds that formed during the day and precipitated at night.

70 A Coherent Single-Hole Spin in a Semiconductor
D. Brunner et al.
Manipulating holes instead of electrons results in the enhancement of the coherence properties of quantum dots.
>> Perspective p. 42

73 Self-Assembling Sequence-Adaptive Peptide Nucleic Acids
Y. Ura et al.
A synthetic DNA analog can dynamically adapt its sequence in response to changing templates.

77 Impact of Shifting Patterns of Pacific Ocean Warming on North Atlantic Tropical Cyclones
H.-M. Kim et al.
Warming of the central Pacific sea surface causes different patterns of atmospheric circulation than do El Niño events.
>> Perspective p. 47

80 Successful Conservation of a Threatened Maculinea Butterfly
J. A. Thomas et al.
Prediction of population dynamics in relation to habitat requirements has led to a conservation success in the UK.

83 Meningococcal Type IV Pili Recruit the Polarity Complex to Cross the Brain Endothelium
M. Coureuil et al.
Adhesion of bacteria to cells lining blood vessels in the brain induces them to part and allows pathogen invasion.

87 Role of Layer 6 of V2 Visual Cortex in Object-Recognition Memory
M. F. López-Aranda et al.
Experiments reveal the localization of short- and long-term visual memory encoding in the rat visual cortex.
>> Perspective p. 40

90 JmjD6 Catalyses Lysyl-Hydroxylation of U2AF65, a Protein Associated with RNA Splicing
C. J. Webby et al.
An oxygenase with an important role in vertebrate development hydroxylates a messenger RNA splicing factor.

93 Essential Role of the Glycosyltransferase Sxc/Ogt in Polycomb Repression
M. C. Gambetta et al.
The Polycomb-group protein super sex combs acts to glycosylate a second Polycomb repressor protein.
>> Perspective p. 45

96 Ligand-Gated Chloride Channels Are Receptors for Biogenic Amines in C. elegans
N. Ringstad et al.
An expanded family of receptor channels that bind neurotransmitters in worms might help to explain behavioral effects in humans.

100 LXR Regulates Cholesterol Uptake Through Idol-Dependent Ubiquitination of the LDL Receptor
N. Zelcer et al.
Cholesterol metabolism is regulated by a signaling pathway that targets the LDL receptor for degradation.
