COVER
Among the contrasts in scale between academic and industrial chemistry is the latter field’s use of raw materials by the trainload. This week’s special section, beginning on page 691, elaborates on the challenges and opportunities in industrial chemistry as the field embarks on its second century of development.

Kepler’s Optical Phase Curve
of the Exoplanet HAT-P-7b
W. J. Borucki et al.
The Kepler mission is performing at the level required to detect Earth-size planets orbiting solar-type stars.

The Last Glacial Maximum
P. U. Clark et al.
Regional patterns are presented of the timing of ice-sheet and mountain-glacier maxima near the end of the last ice age.

The Genetic Architecture
of Maize Flowering Time
E. S. Buckler et al.
Assaying nearly a million plants reveals that maize flowering time is not controlled by a large effect at any single locus.
>> Perspective p. 688

Measuring the Cosmic-Ray Acceleration Efficiency of a Supernova Remnant
E. A. Helder et al.
The pressure induced by cosmic rays produced by the explosion of a star exceeds the thermal pressure behind the shock wave.
>> Perspective p. 683

Emuliation of a Quantum Spin with a Superconducting Phase Qudit
M. Neeley et al.
A multilevel superconducting device is used to emulate the manipulation of quantum spin systems.
>> Perspective p. 689

Folding DNA into Twisted and Curved Nanoscale Shapes
H. Dietz et al.
Site-directed insertions and deletions of base pairs direct twist and curvature in crystal-like DNA arrays.
>> Perspective p. 685; Science Podcast

Unexpected Epoxide Formation in the Gas-Phase Photooxidation of Isoprene
F. Paulot et al.
The oxidation of isoprenes in the absence of nitric oxide produces epoxides that can facilitate the formation of organic aerosols.
>> Perspective p. 687

Phylogenetic Conservatism of Extinctions in Marine Bivalves
K. Roy et al.
Extinction rates of fossil bivalves tended to be higher in certain lineages and were influenced by prior events.

Genetic Properties of the Maize Nested Association Mapping Population
M. D. McMullen et al.
Outcrossing vigor in maize is most likely due to retained variability in regions around the centromeres.
>> Perspective p. 688

Multiscale Mechanics of Fibrin Polymer: Gel Stretching with Protein Unfolding and Loss of Water
A. E. X. Brown et al.
Protein unfolding in stretched fibrin blood clots creates porous gels that can withstand high strains.

The C-Ala Domain Brings Together Editing and Aminoacylation Functions on One tRNA
M. Guo et al.
Many alanyl-transfer RNA synthetases contain a domain that promotes aminoacylation and editing of transfer RNA.

Generalized Models Reveal Stabilizing Factors in Food Webs
T. Gross et al.
Analysis of several billion replicates of food webs reveals universal topological rules affecting their stability.

C3PO, an Endoribonuclease That Promotes RNAi by Facilitating RISC Activation
Y. Liu et al.
Reconstitution of RNA interference reveals that Slicer activity is enhanced by the protein C3PO.

Effects of Antibiotics and a Proto-Oncogene Homolog on Destruction of Protein Translocator SecY
J. van Stelten et al.
Antibiotics promote the destruction of a vital protein translocation complex in bacteria.
>> Perspective p. 684

Synaptic Integration in Tuft Dendrites of Layer 5 Pyramidal Neurons: A New Unifying Principle
M. E. Larkum et al.
Thin tuft and basal dendrites of pyramidal neurons use N-methyl-D-aspartate spikes to sum up synaptic inputs in semi-independent compartments.

Spinal Endocannabinoids and CB1 Receptors Mediate C-Fiber–Induced Heterosynaptic Pain Sensitization
A. J. Pernía-Andrade et al.
Noxious stimulation releases endocannabinoids in the spinal cord that may promote, rather than inhibit, the perception of pain.

An Alternative DNA Structure Is Necessary for Pilin Antigenic Variation in Neisseria gonorrhoeae
L. A. Cahoon and H. S. Seifert
A guanine quartet DNA structure regulates antigenic variation in Neisseria gonorrhoeae.
