Public Education to the Highest Degree

Highly regarded doctoral programs
The Graduate Center is the principal Ph.D.-granting institution of the City University of New York. Many of the Graduate Center’s more than thirty doctoral programs are regularly ranked among the best in the country.

Renowned teacher-scholars
Over the last decade, the Graduate Center has added dozens of world-class scholars to its already eminent faculty roster. Five faculty members were awarded Guggenheim Fellowships this year alone.

Fellowships for incoming students
About 300 fellowships available to first-year students provide each recipient with $18,000-$24,000 a year for five years, plus tuition remission and low-cost health insurance.

The heart of New York City
Located across from the Empire State Building in one of the world’s most cosmopolitan environments, the Graduate Center offers students a wide range of research opportunities and presents myriad cultural events.

Please visit www.gc.cuny.edu to learn more about this remarkable institution.
These days, productivity is everything in our business. Knowing that our scientists were losing valuable time due to service-related issues wasn’t helping. To solve this problem and improve overall organizational efficiency, we looked at ways we could consolidate by purchasing from fewer suppliers. GE Healthcare was the only company that was happy to manage everything, regardless of the OEM; unbeatable flexibility that allows our teams to focus on what they are best at. Of course, GE Healthcare’s track record in healthcare is world-class and it’s a real benefit having a company that is happy to manage equipment of all types."

Richard Dickinson, Director of Operations, ERBI Ltd.

Pharmaceutical and biotech companies around the world rely on GE Service to deliver total coverage. From instrument service agreements — including systems from other manufacturers — to asset lifecycle management and facility validation. Now that’s service in 360°. At GE Healthcare Life Sciences, our focus is on helping scientists achieve even more, faster. It’s a commitment we have in our genes. And all this is backed by the service, support, and investment for the future that being part of GE can bring.

AAAS is here.

With the ability to access anywhere in the world, Science Digital is the electronic version of Science magazine supporting our ongoing strides towards an eco-friendly future. At just $99 for professionals and $50* for students and postdocs, Science Digital is currently available at a discounted rate offering our readers the very latest in groundbreaking scientific news and discoveries. And this is just one of the ways that AAAS is committed to advancing science to support a healthy and prosperous world. Join us. Together we can make a difference. promaaas.org/show

The new Thermo Scientific NanoDrop 2000 and 2000c Spectrophotometers offer true micro-sample analysis, with sample size capability as low as 0.5 µl and a measurement time of less than five seconds. Either of these is the perfect instrument for all your quantitation needs—DNA, RNA, proteins and more. Providing full spectrum UV-Vis results, both instruments can analyze samples with concentrations greater than 15,000 ng/µl (dsDNA) without dilutions. Innovative software makes it easy to build your own methods, design reports and export data. And with both pedestal and cuvette capability, the NanoDrop™ 2000c is the one spectrophotometer that does it all.

**Test-drive the NanoDrop 2000 or 2000c in your own lab!***
Visit [www.nanodrop.com](http://www.nanodrop.com) to schedule your test-drive. Try out an instrument and run your own samples. It’s completely free.

*Available only in US and Canada*
Restriction Enzymes from New England Biolabs

With 35 years of experience in enzyme technology, New England Biolabs leads the industry in quality, selection and innovation for restriction enzymes. Our expertise in purification coupled with a reliance on recombinant technology results in highly pure enzymes suitable for even the most sensitive applications. Additionally, stringent quality controls ensure that our enzymes deliver optimal performance. For quality you can count on, make NEB restriction enzymes your first choice.

Advantages:
- **Selection** – More specificities than any other supplier
- **Convenience** – Optimal activity for over 160 enzymes in a single buffer
- **Quality** – State-of-the-art production and stringent QCs
- **Innovation** – HF enzymes engineered for reduced star activity
- **Performance** – Guaranteed

Power and purity of NEB Restriction Enzymes

Recombinant HindIII is powerful enough to digest 1 μg of DNA in 5 minutes, but can also be used in overnight digests with no indication of nuclease contamination. Marker (M) is the 1 kb DNA Ladder (NEB #N3232).

Choose recombinant enzymes for a higher quality product with lot-to-lot consistency.
Human Exome on a Single Array: Sequencing Simplified

Human Exome Sequencing:
A Step Towards Personalized Healthcare

NimbleGen Sequence Capture 2.1M Human Exome Arrays
Now Available for 454 Sequencing Systems

The NimbleGen Sequence Capture and 454 Sequencing System technologies combine to allow researchers to sequence the exome (all the exons) from each person’s genome.

For example, a sample for a single disease case can be captured on a NimbleGen Sequence Capture 2.1M Human Exome array with subsequent 454 Sequencing runs generating ~1Gb of raw sequence. High specificity and high sensitivity are achieved with ~80% of the reads overlapped with the exon targets and 91% of target bases were covered by at least one sequencing read.

- **Easily Capture the Human Exome:** Use a single 2.1M array to capture ~180,000 human coding exons and ~550 miRNA exons in your own lab.
- **Reduce Your Cost, Speed Your Research:** Eliminate the need for hundreds of thousands of PCR reactions, putting your research on the fast-track for biomedical breakthroughs.
- **Get the Complete Picture, Faster:** GS FLX Titanium series generate more than 1 million high-quality reads (400bp) per 10-hour run.
- **Targeted Capture, Relevant Reads:** A single array enables researchers to focus on the most relevant 1% of the human genome, the human exome.
- **Accelerate Discovery:** Dedicated 454 Sequencing tools for analysis allow straightforward interpretation of data.

No doctor alone can stop SIDS, childhood epilepsy or brain tumors. That’s why we brought his team to Seattle.

Dr. Nino Ramirez, Director of the Center for Integrative Brain Research at Seattle Children’s Research Institute, is dedicated to finding cures for some of the most serious childhood diseases. A world-renowned researcher and Professor of Neurological Surgery at the University of Washington, Dr. Ramirez leads a team of top brain researchers at Seattle Children’s.

At Seattle Children’s, finding cures for tomorrow is as important as treating children today. With a focus on translational research, our teams collaborate daily, both within their own groups and with other leading researchers—in state-of-the-art laboratories with the most advanced technology available. To learn more, visit seattlechildrens.org/research.
Make the best of it!
Top quality for your sample.

Each of your valuable samples deserves the best treatment. See for yourself how the real-time PCR Tube Strips & Masterclear™ Cap Strips will save time and reduce costs.

Sample loss in plates can be time consuming and expensive. Therefore, the close environment of each sample should be adapted to its specific quality and purity needs. This can involve a specific purity level or the absence of certain substances, but also stability, reliability, or geometry. The Eppendorf real-time PCR Tube Strips & Masterclear™ Cap Strips are designed to cover all of the specific needs of your samples!

Masterclear™ Cap Strips
- Inverted Dome prevents scratching of the optical surface
- Inverted Dome reduces tube volume
- Optimized for optimum light transmission

real-time PCR Tube Strips
- White wells with improved reflection
- High mechanical stability
- Extremely thin walls for optimum heat transfer

ACROSS THE HALL OR ACROSS THE GLOBE, REFMAN KEEPS EVERYBODY ON THE SAME PAGE.

No matter where you or your colleagues are in the world, so are your references. With Reference Manager,™ you can collaborate with others on a network—or even the Web. Simplify your publishing with Reference Manager where you can search Internet databases, organize your references and create instant bibliographies. Plus, with newly added features you can do even more.

- Attach any file to a record and create a single Reference Manager repository
- Cite While You Write™ with a Reference Manager tab on the Word 2007 ribbon
- Use Web Publisher to collaborate with colleagues

Simplify your life and keep everybody on the same page today.

Proteomics System
The Lucid Proteomics System combines Bio-Rad’s ProteinChip surface-enhanced laser desorption/ionization-based array technology with Bruker’s ultraflXtreme matrix-assisted laser desorption ionization/time of flight/time of flight mass spectrometer, enabling researchers to use both top-down and bottom-up proteomics approaches for biomarker discovery on the same system. The Lucid ID Access Pack, the first product designed for the system, allows researchers who currently profile their biomarkers using Bio-Rad’s ProteinChip array technology to complete the biomarker purification process and identify these biomarkers with high confidence. An advantage of the Lucid ID Access Pack is the ability to identify peptides under 4 kilodaltons on a ProteinChip array after a simple, one-step enrichment.

Protein Detection Stains
Three new stains for postelectrophoretic protein detection are reversible and claimed to be more sensitive than many currently available colorimetric and fluorescent stains. Available in blue, green, and red colors as CSLblue, CSLgreen, and CSLred, these protein stains can detect a minimum of 1 ng to 3 ng of protein per square millimeter of gel. Staining is simple, with the gel simply immersed directly within the CSLblue, CSLgreen, or CSLred stain for approximately one hour, which is similar to the time required for stains such as Coomassie and SYPRO Ruby. However, destaining is generally faster, and can be completed in as little as 30 minutes. Visualization of the gel is performed with a visible light filter on a standard ultraviolet transilluminator, using the lower energy 312 nm or 365 nm wavelengths.

Quantitative Proteomics
Two new products are designed to increase the productivity of quantitative proteomics research. Intelligent Selected Reaction Monitoring (iSRM) improves the throughput of SRM assays. Available on all Thermo Scientific TSQ (triple stage quadrupole), iSRM increases the sensitivity and selectivity of targeted quantitation assays for simultaneously verifying and quantifying targeted proteins. iSRM is designed to target as many as 1000 peptides and handle more than 10,000 SRM transitions in a single experiment. As part of this targeted quantitation workflow, Pinpoint software is available as a free download. It is designed to simplify the transition from early-stage biomarker discovery to larger-scale, quantitative verification of putative biomarkers and general quantitative proteomics.
Thermo Fischer

Mass Spectrometry Tools
Two new mass spectrometry tools are designed to help laboratories in a variety of industries advance their efforts to improve public health and safety by advancing food and water contaminant testing, forensic drug screening, and protein biomarker research. Cliquid 3.0 Software is an automated application for contaminant testing and forensic analysis. It enables scientists to identify unknown compounds, expanding the scope of Cliquid software to identify more compounds. The mTRAQ triplex reagents are a set of chemical reagents that label proteins in complex samples for targeted quantitation. They make biomarker identification more accurate and double the throughput of analysis. These tools are optimized for Applied Biosystems/MDS Analytical Technologies mass spectrometers.

GC Columns
Two mid-polarity columns have been added to the Zebon Inferno high-temperature gas chromatography (GC) line. The ZB-XLB-HT and ZB-35HT can withstand temperatures up to 400°C, enabling analyses of compounds with high molecular weights and boiling points. The Zebon Inferno nonmetal columns are stable at high temperatures due to proprietary coating and binding technologies, providing long lifetime, low bleed, and low activity. They are suitable for analyses in environmental, food and beverage, pharmaceutical, toxicology, and biofuels applications.

Structural Elucidation Software
Mass Frontier 6.0 is a powerful mass spectrometry (MS) software package that offers sophisticated features for the management, evaluation, and interpretation of mass spectra. The software is applicable to small molecule structural elucidation in a wide range of applications, including metabolite identification and impurity analysis in drug discovery and toxicology studies. Providing comprehensive spectral data and fragmentation mechanism knowledge management, the new version of Mass Frontier facilitates structural elucidation by simplifying the interpretation of MS’ spectral data.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by Science or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.
Citrus cultivation is threatened by a very serious disease called Citrus Greening or Huanglongbing (HLB). Symptoms are latent, then become lethal. The spread and cause of HLB are associated with a phloem-feeding insect (Asian Citrus Psyllid) and a fastidious bacterium (Candidatus Liberibacter).

The Citrus Research and Development Foundation requests proposals focused on comprehensive methods of controlling psyllid transmission of disease.

We also invite proposals of $100,000 or less to test new methods of disease control made possible using the bacterial genomic sequence recently published at:

http://www.citrusgreening.org/

We need the brightest minds to quickly help us find the best solutions. Infectious disease has no boundaries. Neither does first-rate science.

Visit www.fcprac.com for details on awards and simplified program application instructions.
R&D Systems Bioactive Proteins
High quality proteins aren’t a luxury, they are a necessity.

WHAT’S THE RISK?
✓ Missed opportunities
✓ Non-specific results
✓ Experiments that can’t be repeated
✓ Weeks or months of wasted time

R&D Systems recombinant mouse Wnt-3a (Catalog # 1324-WN) and Wnt-5a (Catalog # 645-WN) promote stress fiber formation in NIH-3T3 cells, while only Wnt-3a promotes nuclear β-Catenin accumulation. Please visit our website for information about our new high purity human Wnt-3a (Catalog # 5036-WNP). Images Courtesy of Dr. Raymond Habas, Robert Wood Johnson School of Medicine.

R&D Systems has spent almost 25 years building its reputation as a source for high quality proteins.

Every stage of protein development takes place in R&D Systems’ laboratories, from cloning of the gene, to protein purification and testing for bioactivity. Because we control all aspects of protein manufacturing, R&D Systems can better control the quality of our products and the technical assistance we offer. Please visit our website at www.RnDSystems.com/go/Proteins for more information.
