A frontal view of the fly brain (blue) showing two groups of dopamine-producing neurons pseudocolored green and magenta. The magenta neurons are engineered to express a light-sensitive protein. Optical signals (symbolized by a magenta beam of light) can selectively report and control the activity of these cells. Miesenböck (page 395) reviews the emerging field of optogenetics in a special section on advances in neuroscience methods starting on page 385.

382 Eppendorf Winner: Evolution and Revolution in Odor Detection
R. Benton

BREVIA

404 Direct Evidence for Spinal Cord Involvement in Placebo Analgesia
F. Eippert et al.
Functional magnetic resonance imaging of the human spinal cord reveals a mechanism for placebo analgesia.

REPORTS

405 Phase Transitions, Melting Dynamics, and Solid-State Diffusion in a Nano Test Tube
V. C. Holmberg et al.
A carbon coating allows the thermodynamic behavior of a germanium nanowire to be probed under constant-volume conditions.

408 The Packing of Granular Polymer Chains
L.-N. Zou et al.
The packing of connected metal rods is used as a model to study the packing behavior of granular materials and polymers.
>> Perspective p. 374

411 Dirac Strings and Magnetic Monopoles in the Spin Ice Dy2Ti2O7
D. J. P. Morris et al.

415 Magnetic Coulomb Phase in the Spin Ice Ho2Ti2O7
T. Fennell et al.
Neutron scattering measurements on two spin-ice compounds show evidence for magnetic monopoles.
>> Perspective p. 375

418 Tyrannosaurid Skeletal Design First Evolved at Small Body Size
P. C. Sereno et al.
The distinct features of Tyrannosaurus, such as their large skull and tiny arms, appear in an earlier small-bodied species.
>> Perspective p. 373

422 Deep-Sea Archaea Fix and Share Nitrogen in Methane-Consuming Microbial Consortia
A. E. Dekas et al.
Methane-oxidizing bacteria in marine sediments may also be a major factor in ocean nitrogen cycling.
>> Perspective p. 377

426 Generation of Functional Ventricular Heart Muscle from Mouse Ventricular Progenitor Cells
I. J. Domian et al.
A combination of tissue engineering and stem cell biology is used to build functional force-generating mouse cardiac tissue.

430 Generation of Medaka Fish Haploid Embryonic Stem Cells
M. Yi et al.
Stem cells that are haploid can sustain stable growth, pluripotency, and genetic integrity in fish cell cultures.

433 Complete Resequencing of 40 Genomes Reveals Domestication Events and Genes in Silkworm (Bombyx)
Q. Xia et al.
Silkworm genomes show signatures of selection associated with domestication.

437 AMPK Regulates the Circadian Clock by Cryptochrome Phosphorylation and Degradation
K. A. Lamia et al.
The protein kinase AMPK couples circadian clocks and metabolism in mammals through effects on a cryptochrome protein.
>> Perspective p. 378

440 Teachers’ Participation in Research Programs Improves Their Students’ Achievement in Science
S. C. Silverstein et al.
Students of U.S. high-school teachers given science research experiences show improved success rates on science exams.

443 The Taste of Carbonation
J. Chandrashekar et al.
The enzyme carbonic anhydrase mediates the taste sensation of carbonated drinks.
>> News story p. 349; Science Podcast

445 Sequential Processing of Lexical, Grammatical, and Phonological Information Within Broca’s Area
N. T. Sahin et al.
Intracranial electrodes record activity in a language-associated area of the brain as words are identified and produced.
>> Perspective p. 372

449 Fast Synaptic Subcortical Control of Hippocampal Circuits
V. Varga et al.
A form of subcortical control of cortical information processing is mediated by a synaptic release of serotonin and glutamate.
