PERSPECTIVES
672  Clean the Air, Heat the Planet?
   A. Arnett et al.
   >> Perspective p. 674; Report p. 716
673  The Basics of Zinc Activation
   I. Marek
   >> Report p. 706
674  Clean Air for Megacities
   D. D. Parrish and T. Zhu
   >> Perspective p. 672; Report p. 716
676  An Ancient Gauge for Iron
   T. A. Rouault
   >> Reports pp. 718 and 722
677  Leaps in Translational Elongation
   A. Liljas
   >> Research Articles pp. 688 and 694
678  Foundations of Societal Inequality
   D. Acemoglu and J. Robinson
   >> Research Article p. 682

BREVIA
681  10-GHz Self-Referenced Optical Frequency Comb
   A. Bartels et al.
   A laser that emits lines every 10 gigahertz can be used for frequency calibration in spectroscopy.

CONTENTS continued >>
RESEARCH ARTICLES

682 Intergenerational Wealth Transmission and the Dynamics of Inequality in Small-Scale Societies
M. Borgerhoff Mulder et al.
Some types of wealth are strongly inherited and, hence, contribute to long-term economic inequality.
>> Perspective p. 678; Science Podcast

688 The Crystal Structure of the Ribosome Bound to EF-Tu and Aminoacyl-tRNA
T. M. Schmeing et al.

694 The Structure of the Ribosome with Elongation Factor G Trapped in the Posttranslational State
Y.-G. Gao et al.
Crystal structures of the ribosome bound to elongation factors provide insights into translocation and decoding.
>> Perspective p. 677

REPORTS

699 High-Temperature Superconductivity in a Single Copper-Oxygen Plane
G. Logvenov et al.
Interfaces of oxide metals and insulators confine a superconducting state to one copper oxide plane.

702 Reconstruction of Molecular Orbital Densities from Photoemission Data
P. Puschnig et al.
Maps of photoelectron momentum can reveal the orbital geometries of aromatic molecules adsorbed on surfaces.

706 Synergic Sedation of Sensitive Anions: Alkali-Mediated Zincation of Cyclic Ethers and Ethene
A. R. Kennedy et al.
Tandem coordination by zinc and an alkali metal increases the reactivity of carbon-hydrogen bonds of organic molecules.
>> Perspective p. 673

708 4D Nanoscale Diffraction Observed by Convergent-Beam Ultrafast Electron Microscopy
A. Yurtsever and A. H. Zewail
Focusing an ultrashort electron pulse enables dynamic structural probing of materials that have nanoscale heterogeneity.

A Late Archean Sulfidic Sea Stimulated by Early Oxidative Weathering of the Continents
C. T. Reinhard et al.
Before Earth’s atmosphere became oxidizing, the oceans may have been sulfide-rich while receiving periodic pulses of iron.

Improved Attribution of Climate Forcing to Emissions
D. T. Shindell et al.
Chemical interactions between atmospheric gases and aerosols modify the global warming impacts of emissions.
>> Perspectives pp. 672 and 674

Control of Iron Homeostasis by an Iron-Regulated Ubiquitin Ligase
A. A. Vashisht et al.

An E3 Ligase Possessing an Iron-Responsive Hemerythrin Domain Is a Regulator of Iron Homeostasis
A. A. Salahudeen et al.
A vertebrate hemerythrin domain in an E3 ubiquitin ligase complex senses and regulates cellular iron levels.

Quantifying the Impact of Immune Escape on Transmission Dynamics of Influenza
A. W. Park et al.
Modeling equine influenza reveals how epidemics originate in amino acid evolution to escape immunity.

The Transmissibility and Control of Pandemic Influenza A (H1N1) Virus
Y. Yang et al.
A detailed picture of the pandemic potential of swine-origin influenza offers guidance for effective mitigation strategies.

Hemagglutinin Receptor Binding Avidity Drives Influenza A Virus Antigenic Drift
S. E. Hensley et al.
Viruses escape antibody responses by changing surface protein structures to increase the strength of binding to host cells.
Bacteria use an amino acid–based code to target effector molecules to specific DNA sequences.

A simple Cipher Governs DNA Recognition by TAL Effectors

Xanthomonas bacteria use an amino acid–based code to target effector molecules to specific DNA sequences.

Structure of Monomeric Yeast and Mammalian Sec61 Complexes Interacting with the Translating Ribosome

A single copy of a protein-conducting channel molecule provides a conduit for polypeptide translocation across membranes.

Induced Chromosomal Proximity and Gene Fusions in Prostate Cancer

Androgen signaling facilitates the formation of an oncogenic fusion gene in prostate cancer cells.

Pandemic H1N1 and the 2009 Hajj

Individual polypeptide nascent chains can adopt distinct conformations within the ribosome exit tunnel.

Reproductive Gene Therapy Helps Blind Children See

Success builds on preliminary work in adults.

Naked Mole Rat Wins the War on Cancer

The ability of a single molecule of cGMP to activate the K+-selective cyclic nucleotide-gated channel allows sea urchin sperm to find an egg.

RESEARCH ARTICLE: An Atypical CNG Channel Activated by a Single cGMP Molecule Controls Sperm Chemotaxis

W. Rönigk et al.

RESEARCH ARTICLE: Increased MKK4 Abundance with Replicative Senescence Is Linked to the Joint Reduction of Multiple microRNAs

B. S. Marasa et al.

PERSPECTIVE: Confronting Morphogen Gradients—How Important Are They for Growth?

F. Hamaratoglu et al.

The guanine exchange factor P-REX2 limits the lipid phosphatase activity of PTEN and is a potential oncogene.

PERSPECTIVE: P-REX2a Driving Tumorigenesis by PTEN Inhibition

N. R. Leslie

The rewards associated with publishing with undergraduate students outweigh the challenges.

SCIENCE CAREERS

Free Career Resources for Scientists

SPECIAL WOMEN-WITH-FAMILIES ISSUE

Returning to Science

With the right support, it is possible to succeed in science after a family-related hiatus.

A Life Lived Backward

Patricia Alireza already had grandchildren when her physics career began to bloom.

TEACHING RESOURCE: To Co-Author or Not

The rewards associated with publishing with undergraduate students outweigh the challenges.
