CONTENTS continued >>

**COVER**

The Interstellar Boundary Explorer (IBEX) spacecraft has returned the first global images of the interaction of our heliosphere with the local interstellar medium. IBEX observations show a ribbon of energetic neutral atoms (reds to greens), snaking between the positions of the two Voyager spacecraft (white dots). This ribbon marks the region where the galactic magnetic field (gray lines) wraps most tightly around the heliosphere’s boundary. See the series of Reports starting on page 959.

RESEARCH ARTICLE
954 Starvation Protects Germline Stem Cells and Extends Reproductive Longevity in C. elegans
G. Angelo and M. R. Van Gilst
During starvation, germline stem cells are saved for regeneration when food is restored. >> Perspective p. 944

REPORTS
959 Global Observations of the Interstellar Interaction from the Interstellar Boundary Explorer (IBEX)
D. J. McComas et al.
962 Width and Variation of the ENA Flux Ribbon Observed by the Interstellar Boundary Explorer
S. A. Fuselier et al.
964 Structures and Spectral Variations of the Outer Heliosphere in IBEX Energetic Neutral Atom Maps
H. O. Funsten et al.
966 Comparison of Interstellar Boundary Explorer Observations with 3D Global Heliospheric Models
N. A. Schwadron et al.
Observations by the Interstellar Boundary Explorer have revealed surprising features in the interaction between the heliosphere and the interstellar medium.
969 Direct Observations of Interstellar H, He, and O by the Interstellar Boundary Explorer
E. Möbius et al.
Detection of H, He, and O flowing into the heliosphere from the interstellar medium tells us about our local interstellar environment.
971 Imaging the Interaction of the Heliosphere with the Interstellar Medium from Saturn with Cassini
S. M. Krimigis et al.
Observations by Cassini show that some of the features revealed by IBEX extend to high energies.
974 Observation of Half-Quantum Vortices in an Exciton-Polariton Condensate
K. G. Lagoudakis et al.
Evidence is presented for the existence of half-quantum vortices in exciton-polariton condensates.
977 A Strain-Driven Morphotropic Phase Boundary in BiFeO₃
R. J. Zeches et al.
Growth of epitaxial films of BiFeO₃ on various substrates may provide a route toward making lead-free ferroelectric devices.
980 Observation of the Role of Subcritical Nuclei in Crystallization of a Glassy Solid
B.-S. Lee et al.
Fluctuation transmission electron microscopy images nanoscale nuclei and their influence on subsequent crystallization. >> Perspective p. 944
984 Partitioning Recent Greenland Mass Loss
M. van den Broeke et al.
The major components of decay contributing to mass loss from the Greenland Ice Sheet can be quantified.
986 CD4⁺ Regulatory T Cells Control Th₁7 Responses in a Stat3-Dependent Manner
A. Chaudhry et al.
Suppressor T cells regulate different classes of immune responses through induction of specific transcription factors.
991 Sexual Conflict Resolved by Invasion of a Novel Sex Determiner in Lake Malawi Cichlid Fishes
R. B. Roberts et al.
A color phenotype that is advantageous to females is linked to a sex-determining gene locus in cichlids.
994 Two Chemoreceptors Mediate Developmental Effects of Dauer Pheromone in C. elegans
K. Kim et al.
Chemical signals that determine alternative nematode developmental programs act via two G protein–coupled receptors. >> Perspective p. 944
998 Mutations in Two Independent Pathways Are Sufficient to Create Hermaphroditic Nematodes
C. Baldi et al.
Female nematode worms can be turned into hermaphrodites through the modification of two genes. >> Science Podcast
1002 Amyloid-β Dynamics Are Regulated by Orexin and the Sleep-Wake Cycle
J.-E. Kang et al.
Sleep patterns can influence amyloid plaque formation in a mouse model of Alzheimer’s disease.
Two White Dwarfs with Oxygen-Rich Atmospheres
B. T. Gänsicke et al.

Two white dwarfs may have evolved from intermediate-mass stars that avoided exploding as supernovae.
